Herbal Drugs and Phytopharmaceuticals Max Wichtl.2004 Pushed by the increase in the knowledge of herbal drug constituents, their effects, and side effects, many herbal products are undergoing a transition from classic herbal teas to standardized extracts. This new edition takes the advances made in medicinal plants research and phytotherapy into account and offers reliable and essential information. It offers comprehensive discussion of the origins, constituents, effects, indications, and dosage of herbal drugs and phytopharmaceuticals. The text also includes phytopharmaceutical information such as types of extraction solvents, drug-to-extract ratios, and dosage recommendations for extracts.

Naturdrogen und ihr Gebrauch Alexander Ochse.2012-01-01 Der Gebrauch von Naturdrogen ist mittlerweile keine exotische Randerscheinung mehr, sondern im Mainstream vieler, meist junger Konsumenten angekommen. Dieses Buch enthält wissenschaftlich fundierte Informationen über dieses Phänomen, besonders für Menschen, die viel mit Jugendlichen und jungen Erwachsenen zu tun haben, wie z.B. Pädagogen und Sozialarbeiter. Der Autor verzichtet auf eine unsachlich-

verteufelnde Darstellung, die gerade für den Praktiker alles andere als hilfreich wäre. Aber auch jeder andere Leser, der sich für dieses aktuelle Thema interessiert, wird nicht nur von der ausführlichen Beschreibung aller wichtigen Naturdrogen profitieren, sondern findet in den Abschnitten über die Kulturgeschichte und den generellen Gebrauch weitere wichtige und interessante Informationen. Ein sehr ausführliches Quellenverzeichnis rundet dieses Werk ab.

Biological Transformation Reimund Neugebauer.2020-09-11 The global population is expected to rise to 9.8 billion by the year 2050 - with everyone ultimately striving for prosperity. New methods must therefore be found to achieve more efficient production. Research to date shows that the biological inventory that has evolved: its products, processes, principles and tools, can spur modern technology. The development of technological innovations based on biological concepts, with the goal of particularly innovative and sustainable value creation, today is collectively known as biological transformation. It results in highly functional products with striking properties that can be both manufactured and utilized in a resource-saving way. In terms of taking responsibility of the good of all people, biological transformation is therefore a path that applied research will have to

take. The Fraunhofer-Gesellschaft has recognized the developmental technology potential of biological transformation and sees it as its task not only to drive the relevant research forward, but also to promote public awareness of the topic.

Medicinal and Aromatic Plants of the World Ákos Máthé.2015-09-30 Medicinal and aromatic plants (MAPs) have accompanied mankind from its very early beginnings. Their utilization has co-evolved with homo sapiens itself bringing about a profound increase in our scientific knowledge of these species enabling them to be used in many facets of our life (e.g. pharmaceutical products, feed- and food additives, cosmetics, etc.). Remarkably, despite the new renaissance of MAPs usage, ca. 80 % of the world's population is relying on natural substances of plant origin, with most of these botanicals sourced from the wild state. This first volume and ultimately the series, provides readers with a wealth of information on medicinal and aromatic plants.

Natural Poisons and Venoms Eberhard Teuscher,Ulrike Lindequist.2023-06-06 Biogenic toxins are fascinating natural products characterized by an enormous diversity of chemical structures and pharmacological activities. They not only pose hazards to humans and animals, but they are important components in the interplay of substances and living beings in nature and, moreover, important sources for new drugs. The present book is the first volume of the 5-volume series Natural Poisons and Venoms. Volumes 1-3 cover poisons produced by plants, volume 4 summarizes poisons and venoms of animals and volume 5 deal with poisons of fungi, cyanobacteria, and other

microorganisms. This volume starts with a fundamental chapter on history, chemistry and pharmacology of natural toxins, importance of the toxins for their producer, potential danger for humans and animals, and general aspects of toxicology including notes for first aid and proposals for clinical measures. The following chapters focus on the poisonous representatives of terpenes and the related steroids. The reader will be informed about the botany and occurrence of plants producing these toxins, the chemistry, the biogenesis and the pharmacology of the toxins, possible causes of poisonings, precautions to avoid poisonings, symptoms of poisonings of humans and animals, proposals for treatment measures and the possible usefulness, in the past, in present and in the future, of these toxins, especially for the development of new medicines. Numerous images of plants and chemical structural formulas complete the book. Extensive lists of literature references are given. The handbook is intended for physicians, veterinarians, pharmacists, chemists, biochemists, food chemists and biologists, for the students in the relevant fields, and also for interested laymen. You will be informed about all aspects of natural toxins based on the latest knowledge.

Medicinal and Aromatic Plants Tariq Aftab, Khalid Rehman Hakeem. 2021-03-27 Before the concept of history began, humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants (MAPs) that were food and medicine. Today, a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health. The international market is also quite welcoming for MAPs and essential oils. The increasing environment and nature conscious

buyers encourage producers to produce high quality essential oils. These consumer choices lead to growing preference for organic and herbal based products in the world market. As the benefits of medicinal and aromatic plants are recognized, these plants will have a special role for humans in the future. Until last century, the production of botanicals relies to a large degree on wild-collection. However, the increasing commercial collection, largely unmonitored trade, and habitat loss lead to an incomparably growing pressure on plant populations in the wild. Therefore, medicinal and aromatic plants are of high priority for conservation. Given the above, we bring forth a comprehensive volume, "Medicinal and Aromatic Plants: Healthcare and Industrial Applications", highlighting the various healthcare, industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects. This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic.

List of Substances of the Competent Federal Government and Federal State Authorities Bundesamt für Verbraucherschutz und Lebensmittelsicherheit. 2014-09-12 List of Substances of the Competent Federal Government and Federal State Authorities Plants and plant preparations are an important part of a balanced diet. Apart from using them as fruit, vegetables or cereals we can also enjoy them as ingredients in the form of herbs or spices or enjoy them in teas. More and more exotic plants are also available whose use as food in Germany was not known up to now. Supermarkets and drugstores also sell an increasing number of products which supposedly benefit health and contain preparations which were previously used in Germany above all in pharmaceutical products. The present category Plants and plant parts of the List of Substances of the Competent Federal Government and Federal State Authorities was provided to facilitate the classification and evaluation of plants and plant parts regarding their use as food or food ingredients. In addition to classification under formal legal aspects the list also provides information on the possible risks involved with certain uses. The list of substances is intended as a guideline for authorities and those placing products on the market.

Medicinal Plants of the World Ben-Erik van Wyk,Michael Wink.2018-10-31 Medicinal plants and plant-derived medicine are widely used in traditional cultures all over the world and they are becoming increasingly popular in modern society as natural alternatives to synthetic chemicals. As more and more natural remedies are being commercialised, there is a need for a user-friendly reference guide to the plants and their products. The book gives the reader a bird's eye view of more than 350 of the best known medicinal plants of the world and their uses, in a compact, colourful and scientifically accurate reference text. It provides quick answers to the most obvious questions: Where does this plant originate? What does it look like? In which culture is it traditionally used? What is it used for? Which chemical compounds does it contain? How safe is it? What is known about its pharmacological activity? What evidence is there that it is effective? The authors also provide short overviews of the various health conditions for which medicinal plants are used and the active compounds (secondary metabolites) found in the plants and their modes of actions. This new edition has an additional 30 plant species, many new and improved photographs and the text has been fully updated to reflect the latest regulatory status of each plant.
