Super Courses Ken Bain.2022-08-23 From the bestselling author of *What the Best College Teachers Do*, the story of a new breed of amazingly innovative courses that inspire students and improve learning. Decades of research have produced profound insights into how student learning and motivation can be unleashed—and it's not through technology or even the best of lectures. In *Super Courses*, education expert and bestselling author Ken Bain tells the fascinating story of enterprising college, graduate school, and high school teachers who are using evidence-based approaches to spark deeper levels of learning, critical thinking, and creativity—whether teaching online, in class, or in the field. Visiting schools across the United States as well as in China and Singapore, Bain, working with his longtime collaborator, Marsha Marshall Bain, uncovers super courses throughout the humanities and sciences. At the University of Virginia, undergrads contemplate the big questions that drove Tolstoy—by working with juveniles at a maximum-security correctional facility. Harvard physics students learn about the universe not through lectures but from their peers in a class where even reading is a social event. And students at a Dallas high school use dance to develop growth mindsets—and many of them go on to top colleges, including Juilliard. Bain defines these as super courses because they all use powerful researched-based elements to build a “natural critical learning environment” that fosters intrinsic motivation, self-directed learning, and self-reflective reasoning. Complete with sample syllabi, the book shows teachers how they can build their own super courses. The story of a hugely important breakthrough in education, *Super Courses* reveals how these classes can help students reach their full potential, equip them to lead happy and productive lives, and meet the world's complex challenges.

Law, Mind and Brain Michael Freeman, Oliver R. Goodenough.2017-05-15 Over the past 20 years, cognitive neuroscience has revolutionized our ability to understand the nature of human thought. Working with the understandings of traditional psychology, the new brain science is transforming many disciplines, from economics to literary theory. These developments are now affecting the law and there is an upsurge of interest in the potential of neuroscience to contribute to our understanding of criminal and civil law and our system of justice in general. The international and interdisciplinary chapters in this volume are written by experts in criminal behaviour, civil law and jurisprudence. They concentrate on the potential of neuroscience to increase our understanding of blame and responsibility in such areas as juveniles and the death penalty, evidence and procedure, neurological enhancement and treatment, property, end-of-life choices, contracting and the effects of words and pictures in law. This collection suggests that legal scholarship and practice will be increasingly enriched by an interdisciplinary study of law, mind and brain and is a valuable addition to the emerging field of neurolaw.

Resources for Teaching Middle School Science Smithsonian Institution, National Academy of Engineering, National Science Resources Center of the National Academy of Sciences, Institute of Medicine.1998-04-30 With age-appropriate, inquiry-centered curriculum materials and sound teaching practices, middle school science can capture the interest and energy of adolescent students and expand their understanding of the world around them. *Resources for Teaching Middle School Science*, developed by the National Science Resources Center (NSRC), is a valuable tool for identifying and selecting effective science curriculum materials that will engage students in grades 6 through 8. The volume describes more than 400 curriculum titles that are aligned with the National Science Education Standards. This completely new guide follows on the success of *Resources for Teaching Elementary School Science*, the first in the NSRC series of annotated guides to hands-on, inquiry-centered curriculum materials and other resources for science teachers. The curriculum materials in the new guide are grouped in five chapters by scientific area—Physical Science, Life Science, Environmental Science, Earth and Space Science, and Multidisciplinary and Applied Science. They are also grouped by type—core materials, supplementary units, and science activity books. Each annotation of curriculum material includes a recommended grade level, a description of the activities involved and of what students can be expected to learn, a list of accompanying materials, a reading level, and ordering information. The curriculum materials included in this book were selected by panels of teachers and scientists using evaluation criteria developed for the guide. The criteria reflect and incorporate goals and principles of the National Science Education Standards. The annotations designate the specific content standards on which these curriculum pieces focus. In addition to the curriculum chapters, the guide contains six chapters of diverse resources that are directly relevant to middle school science. Among these is a chapter on educational software and multimedia programs, chapters on books about science and teaching, directories and guides to science trade books, and periodicals for teachers and students. Another section features institutional resources. One chapter lists about 600 science centers, museums, and zoos where teachers can take middle school students for interactive science experiences. Another chapter describes nearly 140 professional associations and U.S. government agencies that offer resources and assistance. Authoritative, extensive, and thoroughly indexed—and the only guide of its kind—*Resources for Teaching Middle School Science* will be the most used book on the shelf for science teachers, school administrators, teacher trainers, science curriculum specialists, advocates of hands-on science teaching, and concerned parents.

Evaluating Interreligious Peacebuilding and Dialogue Mohammed Abu-Nimer, Renáta Katalin Nelson.2021-09-20 In the emerging fields of religious and interreligious peacebuilding, the question of monitoring and evaluation is a challenging, yet necessary process. The need to develop comprehensive yet fitting evaluation models for religious and interreligious peacebuilding is not only important for donor interests, but also critical as a means of documenting and learning for peacebuilders themselves. Theories and best practices in monitoring and evaluation have become prevalent in many fields, yet the amount of literature on evaluating intercultural and, especially, religious and interreligious projects remains scant in comparison. This volume offers a unique contribution that not only looks at several of the challenges and implications faced by religious and interreligious peacebuilders but also provides concrete examples of new models and tools for monitoring and evaluating religious and interreligious peacebuilding projects. In doing so, this volume serves as a tool and point of reference for individuals and organizations developing and implementing interreligious dialogue and peacebuilding projects.

The book offers a dynamic collection of classroom-ready lessons, projects, and lab activities that encourage students to integrate basic science concepts and skills into everyday life.

Handbook of Research on Family Literacy Practices and Home-School Connections Fox, Kathy R., Szech, Laura E.. 2022-06-24 Research has shown that families and schools that partner together improve literacy outcomes for their students. Family literacy includes homework and shared book reading but goes beyond these school-to-home activities to encompass family-generated practices. These literacies include family connections around activities such as cooking, play, religion, social, and community groups. Further study on the importance of the partnership between the home and school is required to implement best practices and provide students with the best possible education. The Handbook of Research on Family Literacy Practices and Home-School Connections seeks to understand the connections made and new information learned during the COVID-19 pandemic surrounding family literacy and shares updated practices and new perspectives on what it means to partner with families and embrace diverse family literacies in this new world. The book also provides teachers' perspectives on how future relationships between the school and home can be shaped through both narrative and research-based chapters. Covering key topics such as parenting, homework, and social distancing, this major reference work is ideal for administrators, school faculty, academicians, scholars, practitioners, instructors, and students.

Quantum Chemistry and Spectroscopy Tricia D. Shepherd, Alexander Grushow, The POGIL Project. 2014-08-18 Quantum Chemistry & Spectroscopy: A Guided Inquiry was developed to facilitate more student-centered classroom instruction of physical chemistry. Based on principles developed through years of research on how students learn, these materials follow the POGIL methodology and have been endorsed by The POGIL Project. This approach implements modern cognitive learning principles by having students learn how to create knowledge and how to test that knowledge. These materials are designed for use in any physical chemistry course as the primary classroom materials, and should be supplemented with a traditional physical chemistry book.

Inquiry in Action James H. Kessler, Patricia M. Galvan. 2005 The purpose of Inquiry in Action is to give elementary and middle school teachers a set of physical science activities to help teach the major concepts in the study of matter. The activities were developed to lend themselves to a guided-inquiry approach and to work across the range of Grades 3-8. To be effective over such a wide grade range, the activities are designed to cover basic concepts but have the flexibility to be modified by teachers through varying questioning strategies, the degree of guidance given students, and the vocabulary used. The materials for all activities are very common, safe, and inexpensive and are available at any grocery store.

Chemistry 2e Paul Flowers, Richard Langely, William R. Robinson, Klaus Hellmut Theopold. 2019-02-14 Chemistry 2e is designed to meet the scope and sequence requirements of the two-semester general chemistry course. The textbook provides an important opportunity for students to learn the core concepts of chemistry and understand how those concepts apply to their lives and the world around them. The book also includes a number of innovative features, including interactive exercises and real-world applications, designed to enhance student learning. The second edition has been revised to incorporate clearer, more current, and more dynamic explanations, while maintaining the same organization as the first edition. Substantial improvements have been made in the figures, illustrations, and example exercises that support the text narrative. Changes made in Chemistry 2e are described in the preface to help instructors transition to the second edition.

Teaching to Exceed in the English Language Arts Richard Beach, Ashley S. Boyd, Allen Webb, Amanda Haertling Thein. 2022-07-21 Timely, thoughtful, and comprehensive, this text directly supports pre-service and in-service teachers in developing curriculum and instruction that both addresses and exceeds the requirements of English language arts standards. It demonstrates how the Common Core State Standards as well as other local and national standards' highest and best intentions for student success can be implemented from a critical, culturally relevant perspective firmly grounded in current literacy learning theory and research. The third edition frames ELA instruction around adopting a justice, inquiry, and action approach that supports students in their schools and community contexts. Offering new ways to respond to current issues and events, the text provides specific examples of teachers employing the justice, inquiry, and action curriculum framework to promote critical engagement and learning. Chapters cover common problems and challenges, alternative models, and theories of language arts teaching. The framework, knowledge, and guidance in this book shows how ELA standards can not only be addressed but also surpassed through engaging instruction to foster truly diverse and inclusive classrooms. The third edition provides new material on: adopting a justice, inquiry, and action approach to enhance student engagement and critical thinking planning instruction to effectively implement standards in the classroom teaching literary and informational texts, with a focus on authors of color integrating drama activities into literature teaching informational, explanatory, argumentative, and narrative writing supporting bilingual/ELL students using digital tools and apps to respond to and create digital texts addressing how larger contextual and political factors shape instruction fostering preservice teacher development

Queering Translation History Eva Spišáková. 2021-06-29 This innovative work challenges normative binaries in contemporary translation studies and applies frameworks from queer historiography to the discipline in order to explore shifting perceptions of same-sex love and desire in translations and retranslations of William Shakespeare's Sonnets. The book brings together perspectives from poststructuralism, queer theory, and translation history to set the stage for an in-depth exploration of a series of retranslations of the Sonnets from the Czech Republic and Slovakia. The complex and poetic language of the Sonnets, frequently built around

era-specific idioms and allusions, has produced a number of different interpretations of the work over the centuries, but questions remain as to how the translation process may omit, retain, or enhance elements of same-sex love in retranslated works across time and geographical borders. In focusing on target cultures which experienced dramatic sociopolitical changes over the course of the twentieth century and comparing retranslations originating from these contexts, Spišiaková finds the ideal backdrop in which to draw parallels between changing developments in power and social structures and shifting translation strategies related to the representation of gender identities and sexual orientations beyond what is perceived to be normative. In so doing, the book advocates for a queer perspective on the study of translation history and encourages questioning traditional boundaries prevalent in the discipline, making this key reading for students and researchers in translation studies, queer theory, and gender studies, as well as those interested in historical developments in Central and Eastern Europe. The Open Access version of this book, available at <http://www.taylorfrancis.com>, has been made available under a Creative Commons [Attribution-Non Commercial-No Derivatives (CC-BY-NC-ND)] 4.0 license.

ISSUES AND DILEMMAS IN SEXUAL BEHAVIOURS Robert Burns.2023-07-01 This book will help those confused by the gender wars to gain a grip on the issues. The distinction between sex and gender identity is explained as to the meaning and implications of the individual elements of the LGBTQ+ group. The roles of culture and religion are shown to create many entwined issues and dilemmas for individuals and society, with serious argument inter alia over dysphoria assessment/treatments and self-declaration, abortion and anti-abortion rights, transgender female athletes competing against biological females, the consent revolution, extra marital affairs, dating apps problems and dictates of religious beliefs.

Cases on Inquiry through Instructional Technology in Math and Science Lennex, Lesia.2012-01-31 There exists a wealth of information about inquiry and about science, technology, engineering, and mathematics (STEM), but current research lacks meaningfully written, thoughtful applications of both topics.Cases on Inquiry through Instructional Technology in Math and Science represents the work of many authors toward meaningful discourse of inquiry used in STEM teaching. This book presents insightful information to teachers and teacher education candidates about using inquiry in the real classroom, case studies from which research suggests appropriate uses, and tangible direction for creating their own inquiry based STEM activities. Sections take the reader logically through the meaning of inquiry in STEM teaching, how to use technology in modern classrooms, STEM projects which successfully integrate inquiry methodology, and inquiry problem solving within STEM classrooms with the aim of creating activities and models useful for real-world classrooms.
