Moon! Earth's Best Friend Stacy McAnulty.2019-06-11 From writer Stacy McAnulty and illustrator Stevie Lewis, Moon! Earth's Best Friend is a light-hearted nonfiction picture book about the formation and history of the moon—told from the perspective of the moon itself. Meet Moon! She's more than just a rock—she's Earth's rock, her best friend she can always count on. Moon never turns her back on her friend (literally: she's always facing Earth with the same side!). These two will stick together forever. With characteristic humor and charm, Stacy McAnulty channels the voice of Moon in this next celestial autobiography in the Our Universe series. Rich with kid-friendly facts and beautifully brought to life by Stevie Lewis, this is an equally charming and irresistible companion to Earth! My First 4.54 Billion Years and Sun! One in a Billion.

Giant Planets of Our Solar System Patrick Irwin.2010-11-25 This book reviews the current state of knowledge of the atmospheres of the giant gaseous planets: Jupiter, Saturn, Uranus, and Neptune. The current theories of their formation are reviewed and their recently observed temperature, composition and cloud structures are contrasted and compared with simple thermodynamic, radiative transfer and dynamical models. The instruments and techniques that have

been used to remotely measure their atmospheric properties are also reviewed, and the likely development of outer planet observations over the next two decades is outlined. This second edition has been extensively updated following the Cassini mission results for Jupiter/Saturn and the newest ground-based measurements for Uranus/Neptune as well as on the latest development in the theories on planet formation.

¿Qué ha sido de Plutón? Paul Sutherland.2010-05-27 En los últimos años, nuestra concepción del Universo ha cambiado. ¿Qué ha sido de Plutón? es un viaje al Sistema Solar tal como lo conocemos en la actualidad. El noveno planeta ha perdido su condición. Ahora, es un planetóide que viaja con nosotros en torno a una estrella de mediana magnitud. En este viaje nos acompañan un número aún por determinar de objetos celestes, entre los que figuran varios candidatos a planetas enanos. Todos juntos formamos una gran familia a bordo de una gigantesca galaxia, la Vía Láctea, que se aleja del centro del Universo. Nuestros antepasados creían que las estrellas permanecían clavadas en una especie de «techo» a poca distancia de la Tierra. Observaban fascinados el comportamiento errático de los planetas, los eclipses, las colas ardientes de los cometas y los pequeños asteroides que se desprendían del firmamento. Desde entonces, los límites del Universo han crecido al mismo tiempo que nuestra capacidad de observación. El Sistema Solar se ha convertido en nuestro pequeño hogar. Este libro explica cómo se convirtió Plutón en el rey de los planetoides. También vamos a enseñarte algo más sobre nuestros vecinos planetarios, el estado actual de la búsqueda de vida inteligente y las posibilidades de encontrarla en los planetas más cercanos. Paul Sutherland es periodista científico y autor especializado en astronomía y astrofísica. Ha escrito para el diario The Times en el Reino Unido y para la revista Astronomy Now. Asimismo, es editor de las publicaciones y la página web de la Sociedad de Astronomía Popular británica. Neil deGrasse Tyson, autor del prólogo, es astrofísico y director del Planetario Hayden del Museo Americano de Historia Natural de Nueva York

(Estados Unidos). Ha escrito varios best-sellers sobre astronomía.

Pale Blue Dot Carl Sagan, Ann Druyan. 2011-07-06 “Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan’s books.”—The Washington Post Book World (front page review) In *Cosmos*, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In *Pale Blue Dot*, Sagan traces the spellbinding history of our launch into the cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual settlement of other worlds is neither a fantasy nor luxury, insists Sagan, but rather a necessary condition for the survival of the human race. “Takes readers far beyond *Cosmos* . . .
