Neuropsychological Assessment Muriel Deutsch Lezak.1995-03-02 The 12 chapters in the second section contain nearly all of the tests and assessment techniques covered in the previous editions plus many additional ones, including newly developed neuropsychological tests, tests from other branches of psychology, research techniques that have only recently been introduced into clinical neuropsychology, tests originating in Europe and elsewhere, and a few measures - as yet untried by neuropsychology - that appear to be potentially useful for neuropsychological purposes. Thus, the third edition of Neuropsychological Assessment maintains its multipurpose functions as an authoritative textbook, reference work, and practitioner's manual.

Simultaneous and Successive Cognitive Processes J.P. Das,John R. Kirby,Ronald F. Jarman.2013-09-25 Simultaneous and Successive Cognitive Processes presents some innovative ideas for defining simultaneous and successive cognitive processes by choosing certain tasks that would elicit the use of coding and planning. Factor analysis is used to assess the organization of cognitive functions in terms of coding and planning. The book demonstrates how to isolate coding and planning processes by using a battery of tasks, and extends the approach to complex cognitive areas such as reading, word association, and sentence comprehension. Comprised of 11 chapters, this book begins with an overview of the evolution of the concept of intelligence and some notable workers in the field, including Cyril Burt, Raymond B. Cattell, Jean Piaget, and Jerome Kagan. The discussion then turns to learning theory and cognitive development as the basis for understanding intelligence. Subsequent chapters focus on intellectual functions in terms of the workings of the brain; simultaneous and successive cognitive processing in children; the relationship of simultaneous and successive coding to school achievement; and simultaneous and successive cognitive processing in children with mental retardation and learning disability. The results of cross-cultural studies on cognitive processes are also discussed, together with the link between language functions and cognitive processing. This monograph will be of interest to teachers, school administrators, and educational psychologists.

Detailed case examples illustrate the dos and don'ts of presenting test score data to clients, parents, and teachers in oral feedback and written reports. Pedagogical Features: *End-of-chapter exercises that emphasize application and understanding, with answers at the end of the book. *Key terms are bolded throughout and accessibly explained in the end-of-book glossary.

Creating Reading Instruction for All Children Thomas G. Gunning. 1996 This book will not tell you how to teach reading. Teaching reading is in large measure a matter of making choices: Should you use basal readers or children's books, or both? Should you teach children to read whole words or to sound out words letter by letter, or both? Should you have three reading groups or four, or no groups? There are no right answers to these questions. The answers depend on your personal philosophy, your interpretation of the research, the level at which you are teaching, the kinds of students you are teaching, community preferences, and the nature of your school or school district's reading program.

Handbook of Response to Intervention and Multi-Tiered Systems of Support Paige C. Pullen,Michael J. Kennedy.2018-10-04 Of the many issues facing special education (and general education) today, it is difficult to imagine one more important or timely than response to intervention (RTI). Almost overnight RTI has become standard practice across the nation. Unfortunately, RTI remains ill-defined, falls far short of its evidence-based practice goal, is almost invariably misused, and often results in more harm than good. Nevertheless, as a conceptual framework RTI has great potential for ensuring that students with disabilities receive appropriate, evidence-based instruction. The mission of this handbook is to present a comprehensive and integrated discussion of response to intervention (RTI) and its relation to multi-tiered systems of support (MTSS) in both special education and general education. Although the two terms are currently used interchangeably, distinct differences exist between them. Therefore, chapters are dedicated to distinguishing the two concepts—RTI and MTSS—and describing each one's unique role in both general and special education. In addition, the authors recommend a third term, Multi-Tiered Instruction, to differentiate the practices related to the purpose of the specific intervention.

Themes in Motor Development H.T.A Whiting,M.G. Wade.2012-12-06 This book is divided into Sections. Each Section is devoted to a particular theme in Motor Development and comprises two or more contributions. The order of presentation is largely fortuitous and does not reflect any value judgement on the part of the editors as to the importance of anyone theme in comparison to others addressed' in the book. This volume is to be seen as a companion volume to 'Motor Development in Children: Aspects of coordination and control' in which the more general issues in motor development presented during the Institute are published. Together, the two volumes provide both a general and a theme specific approach to this expanding field of knowledge. XI PREFACE Books and conferences, on what in North America is euphemistically termed motor development, have been few and far between in the past 25 years. This is not to say that the study of how children acquire and develop motor skills has not been a subject on which scientists have focused their attention. In the United States in the 1930's and 1940's, Bayley (1935) and Gesell and Amatruda (1947) described and scaled the rates at which young children acquired motor skills. In Europe, the development of children's motor behaviour was of theoretical interest to Piaget (1952).

Explanatory Models, Unit Standards, and Personalized Learning in Educational Measurement William P. Fisher Jr.,Paula J. Massengill.2022-10-15 The papers by Jack Stenner included in this book document the technical details of an art and science of measurement that creates new entrepreneurial business opportunities. Jack brought theory, instruments, and data together in ways that are applicable not only in the context of a given test of reading or mathematics ability, but which more importantly catalyzed literacy and numeracy capital in new fungible expressions. Though Jack did not reflect in writing on the inferential, constructive processes in which he engaged, much can be learned by reviewing his work with his accomplishments in mind. A Foreword by Stenner's colleague and co-author on multiple works, William P. Fisher, Jr., provides key clues concerning (a) how Jack's understanding of measurement and its values aligns with social and historical studies of science and technology, and (b) how recent developments in collaborations of psychometricians and metrologists are building on and expanding Jack's accomplishments. This is an open access book.
