*Pharmacists-secret Shopper Communications on Two Over-the-counter (otc) Drugs- Ibuprofen and Loperamide* Joanne M. Peters.2019 Introduction: Based on the growing number of prescriptions drugs becoming available over-the-counter (OTC), pharmacists are key collaborators with patients to facilitate effective OTC use. Practicing pharmacists have suggested that when patients ask OTC questions, it gives them permission, to ask the patient additional questions without overstepping professional boundaries. Objectives: Explore how practicing pharmacists gather pertinent patient information provide OTC information for two different drugs-ibuprofen and loperamide. For both OTCs, consultations, without a patient question were compared to consultations with a standardized: (1) open-ended and (2) closed-ended patient questions. Methods: For both OTCs, consults without a patient question were compared to consults with a secret-shopper asking either an open-ended question, [What else should I know about this medication before taking it?] or a closed-ended question, [Anything else I should know about this medication before taking it?] 25 pharmacists from

eight midwestern pharmacies consented to participate. Third-year pharmacy students were secret-shoppers (5 females and 2 males). Outcome measures included: number of topics assessed and discussed by pharmacists and consult lengths (in seconds). Consults were coded using previously validated and published coding tools with established inter-rater reliability ( $\kappa = 0.94$ ). Results: 90 audio-recorded pharmacist-patient consults were analyzed. Consults with an open-ended secret-shopper question had the greatest number of topics addressed by the pharmacist (8.7 topics). Consults with an open-ended secret-shopper question were shorter in consult length than consults with close-ended questions (151.6 vs. 159.3 seconds). Consults with closed-ended questions were significantly longer than no question (121.6 seconds); no significant difference in length was found between open-ended question consults and no question consults. Length of consults did not significantly differ based on the OTC (142.9 vs. 144.7 seconds). Pharmacists assessed and discussed more topics during ibuprofen consults than loperamide (9.1 vs. 7.5 topics). Conclusion: Questions asked by patients impact how pharmacists counsel patients on OTCs. Asking open-ended secret-shopper questions were more efficient, in terms of length than asking closed-ended questions while also providing the patient with more information. Patient questions are powerful and not all questions are created equal
