Broadband Satellite Communications for Internet Access Sastri L. Kota, Kaveh Pahlavan, Pentti A. Leppänen. 2003-11-30 Broadband Satellite Communications for Internet Access is a systems engineering methodology for satellite communication networks. It discusses the implementation of Internet applications that involve network design issues usually addressed in standard organizations. Various protocols for IP- and ATM-based networks are examined and a comparative performance evaluation of different alternatives is described. This methodology can be applied to similar evaluations over any other transport medium.

**Satellite Communications** Michael J. Miller, Branka Vucetic, Les Berry. 1993-06-30 Based on the premise that designers of future satellite systems, faced with strong competition from optic fibers, must take account of the unique features that satellites have to offer, this volume places more emphasis on satellite mobile services and broadcasting, and less emphasis on fixed point-to-point high capacity services than traditional textbooks in the field. An additional emphasis is placed on design issues. Numerous illustrative system design examples and numerical problems are provided. Annotation copyright by Book News, Inc., Portland, OR

*Communications Satellites* Joseph N. Pelton, Robert J. Oslund, Peter Marshall. 2004-09-22 Over the past 40 years, satellites have played a key role in creating a global culture, spreading worldwide entertainment, stimulating technological interchange, and promoting trade around the world. *Communications Satellites: Global Change Agents* addresses communications satellites not only in terms of the technology and the services they provide, but also with consideration of the technology's impact in socio-political, security, economic, policy, news, entertainment, and cultural spheres. Editors Joseph N. Pelton, Robert J. Oslund, and Peter Marshall bring together contributions that place satellites into a broad context and examine how they influence and define today's world. Written in a non-technical, reader-friendly style, chapters investigate how satellite communications work and explore the role of satellites in such arenas as: \*news and entertainment systems around the world; \*Internet, E-business, and the new global economy; \*global television and radio channels; \*military operations; and \*education, health services, economic development, and electronic immigration. *Communications Satellites: Global Change Agents* examines what satellites have been and projects how they will evolve in the future, articulating what they mean to the world today and forecasting what they will mean tomorrow. As the definitive source on communications satellites and their role in today's world, this volume serves as a valuable, unique, and timely resource for scholars and students in telecommunications, communication and technology, mass communication and society, and broadcasting.

Beyond the Ionosphere National Aeronautics and Space Administration, Andrew J. Butrica. 2014-04-18 October 1995 marked the fiftieth anniversary of Arthur C. Clarke's famous article in Wireless World proposing the use of satellites placed in geosynchronous orbit for worldwide communications relay. The article proved prophetic, for it heralded the modern era of telecommunications. Beginning in the early 1960s, several series of satellites were launched into Earth's orbit; collectively they transformed the latter twentieth century, creating a global village of instantaneous communications. Previously, the ionosphere had defined the limits of radio communication; today, by going beyond the ionosphere, broadband telecommunication has entered a new age. This book describes the first attempts to go beyond the ionosphere, including both the earliest uses of the Moon as a passive, natural relay satellite and Project Echo, the massive inflated satellite off which Earth stations bounced radio signals, as well as contemporary communications via active-repeater artificial moons in orbit about the Earth. It analyzes both American and foreign satellite communications, the histories of several satellite communications companies, the roles of government agencies, and the contribution of research laboratories. The book is a collection of papers originally presented during an international symposium held in Washington, D.C., at the time of the fiftieth anniversary of Clarke's 1945 article. Contributions from historians and other scholars from throughout the world present a stimulating analysis of one of the most important global technologies at work today—and how it originated and evolved.

**Beyond the Ionosphere** Andrew J. Butrica.1997 Fifty years after the founding of NASA, from 28 to 29 October 2008, the NASA History Division convened a conference whose purpose was a scholarly analysis of NASA's first 50 years. Over two days at NASA Headquarters, historians and policy analysts discussed NASA's role in aeronautics, human spaceflight, exploration, space science, life science, and Earth science, as well as crosscutting themes ranging from space access to international relations in space and NASA's interaction with the public. The speakers were asked to keep in mind the following questions: What are the lessons learned from the first 50 years? What is NASA's role in American culture and in the history of exploration and discovery? What if there had never been a NASA? Based on the past, does NASA have a future? The results of those papers, elaborated and fully referenced, are found in this 50th anniversary volume.--Introduction.

**Laser Satellite Communication** William H. Mott IV, Robert Sheldon. 2000-01-30 This introduction to the next generation of human telecommunications enterprise examines the development of laser satellite communications and describes its advantages over previous technologies. It looks at the development of the technology and the industry through wired and wireless media and presents the vision, promise, and challenges of free-space lasers. The book balances its focused consideration of the telecommunications industry and markets with practical thoughts on creating a business involved in the introduction of commercial laser satellite communications systems. Scholars, investors, venture capitalists, policy makers, and corporate leaders will find this to be a comprehensive and eye-opening bridge between the existing telecommunications industry and the opportunities of the next generation. The opening chapters introduce the concepts of Migration, Specialization, and Interconnectivity as solutions inherent in third generation laser-satellite communications. The high capacity of the optical spectrum invites migration of applications beyond the narrow RF spectra to the high frequencies of free-space laser beams. Migration stimulates specialization of voice and duplex at the lower, optimal RF spectra. The third generation—laser-wired space—focuses around global satellite interconnectivity between fiber optics and RF. The final chapters introduce a model business concept to pioneer the third generation. Several approaches to capitalization, organization, technology development, and business strategies provide an exciting stimulus for pragmatic approaches to commercial concepts.

*Mobile and Personal Satellite Communications 3* Marina Ruggieri.2012-12-06 This book of Proceedings contains papers of the Third European Workshop on Mobile/Personal Satcoms (EMPS '98), held in Venice, Italy, November 1998. For the third time, EMPS has given to the experts an opportunity for exchanging opinions and novel ideas in the exciting field of mobile and personal satellite communications. As with the 1996 edition, EMPS '98 issued a formal call for papers, gathering a large number of contributions from many different countries. Each submitted paper has been reviewed by international referees and, finally, selected by the Workshop Steering Committee (WSC). Furthermore, key-topics in the field of mobile/personal satcoms have also been focused on through a few invited papers. As EMPS has been conceived to gather trends and novelties in the field of mobile/personal satcoms, it is tightly matched to the natural evolution of the field itself. In this frame, the reader will notice how the dominant topics are related to system and network issues, while a very little number of contributions have been provided in the propagation and channel related areas. This represents a natural trend of a field, where deep efforts have been paid in the past years to understanding and modelling the physical layer and where the present interest is mostly migrating to the applications. Further changes and novelties may be envisaged in the future of this field. I believe that EMPS will continue to represent an effective opportunity to catch and understand more deeply this evolution.
