Instruction Manual for Ford Trimotor Airplane Stout Metal Aircraft Co. 2013-06 First produced in 1925, the Ford Trimotor had an immediate impact on commercial aviation, enabling Transcontinental Air Transport to launch coast-to-coast service in the USA and helping Pan American Airways expand into Central and South America. Developed by William B. Stout, whose Stout Metal Airplane Company was acquired by Ford Motor Co. in 1924, the aircraft had three Wright radial engines and boasted all-metal construction. It could fly in both passenger and cargo configurations and was, for its time, both reliable and rugged. Its capacity however was limited, with rapid advances in aviation led to the curtailment of production in 1933. By then 199 Tin Gooses had been produced. They would go on to fly with over 100 airlines worldwide, and in the service of the U.S. military and other air forces. Originally entitled Suggestions on the Operation of the Ford Trimotor, this flight manual dates to 1926. It provides a fascinating look inside the cockpit of one of history's most iconic aircraft.

P-40 Warhawk Pilot's Flight Operating Manual Periscope Film Com. 2006-05 Flown by the American Volunteer Group in China known as the Flying Tigers, the P-40 Warhawk earned a reputation for its toughness in combat. Facing odds of 6 to 1 in most combat situations, AVG pilots relied on their skill, daring and their aircraft's superior diving speed to achieve victory. By war's end the Tigers had destroyed more than 1200 Japanese planes, with another 700 listed as probables. Their own losses came to 573 aircraft. Originally printed by the U.S. Army Air Force for pilots transitioning to the P-40, this flight manual contains detailed information about one of history's great planes. Originally classified as restricted, the manual was declassified long ago and is here reprinted in book form. Some color images appear in black and white, and some pages have been slightly reformatted. Care has been taken however to preserve the integrity of the text.

Field manual (FM) 3-04.203 presents information to plan and conduct common aviation tasks for fixed- and rotary-wing flight. However, it has become more inclusive and its scope broadened to reduce the number of manuals used by Army crewmembers for reference. One of the underlying premises of Army aviation is if crewmembers understand 'why' they will be better prepared to 'do' when confronted with the unexpected. FM 3-04.203 endeavors to ensure that crewmembers understand the basic physics of flight, and the dynamics associated with fixed- and rotary-wing aircraft. A comprehensive understanding of these principles will better prepare a crew member for flight, transition training, and tactical flight operations.
