The Heart of the Photograph David Duchemin.2020-03-17

Learn to ask better, more helpful questions of your work so that you can create stronger and more powerful photographs.

Photographers often look at an image—one they've either already created or are in the process of making—and ask themselves a simple question: “Is this a good photograph?” It’s an understandable question, but it’s really not very helpful. How are you supposed to answer that? What does “good” even mean? Is it the same for everyone?

What if you were equipped to ask better, more constructive questions of your work so that you could think more intentionally and creatively, and in doing so, bring more specific action and vision to the act of creating photographs? What if asking stronger questions allowed you to establish a more effective approach to your image-making? In *The Heart of the Photograph: 100 Questions for Making Stronger, More Expressive Photographs*, photographer and author David duChemin helps you learn to ask better questions of your work in order to craft more successful photographs—photographs that express and connect, photographs that are strong and, above all, photographs that are truly yours.

From the big-picture questions—What do I want this image to accomplish?—to the more detail-oriented questions that help you get there—What is the light doing? Where do the lines lead? What can I do about it?—David walks you through his thought process so that you can establish your own. Along the way, he discusses the building blocks from which compelling photographs are made, such as gesture, balance, scale, contrast, perspective, story, memory, symbolism, and much more. *The Heart of the Photograph* is not a theoretical book. It is a practical and useful book that equips you to think more intentionally as a photographer and empowers you to ask more helpful questions of you and your work, so that you can produce images that are not only better than “good,” but as powerful and authentic as you hope them to be.

Underwater Dogs Seth Casteel.2012-10-23 The exuberant, exhilarating photographs of dogs underwater that have become a sensation From the water's surface, it's a simple exercise: a dog's leap, a splash, and then a wet head surfacing with a ball, triumphant. But beneath the water is a chaotic ballet of bared teeth and bubbles, paddling paws, fur and ears billowing in the currents. From leaping Lab to diving Dachshund, the water is where a dog's distinct personality shines through; some lounge in the current, paddling slowly, but others arch their bodies to cut through the water with the focus and determination of a shark. In more than eighty portraits, award-winning pet photographer and animal rights activist Seth Casteel captures new sides of our old friends with vibrant underwater photography that makes it impossible to look away. Each image bubbles with exuberance and life, a striking reminder that even in the most loveable and domesticated dog, there are more primal forces at work. In *Underwater Dogs*, Seth Casteel gives playful and energetic testament to the rough-and-tumble joy that our dogs bring into our lives.

The Essence of Photography Bruce Barnbaum. 2014-11-04 There is a lot more to photography than simply picking up a camera, pointing it toward something, and tripping the shutter. Achieving a great photograph requires thought and preparation, an understanding of the photographic process, and a firm grasp of how light and composition affect a photo. There must be personal involvement and personal expression. There must be experimentation, with the recognition that only a small percentage of experiments end successfully. In this book, best-selling author and world-renowned photographer and teacher Bruce Barnbaum explores these seldom-discussed issues by drawing upon his personal experiences and observations from more than 40 years of photographing and teaching. In addition to photographs, Bruce also uses painting, music, and writing, as well as the sciences and even business, to provide pertinent examples of creative thinking. These examples serve as stepping-stones that will lead you to your own heightened ability to see and be creative. Creativity is a topic that is almost wholly ignored in formal education because most instructors think that it cannot be taught or learned. To the contrary, Bruce has proven that photographic seeing and creativity can be taught, learned, and improved. This book expands on the ideas that are central to Bruce's method of teaching photography, which he has used in workshops for the past 41 years. Included in the book are in-depth discussions on the following topics: Defining your own unique rhythm and approach as a photographer How to translate the scene in front of you to the final photograph The differences and similarities between how an amateur and a professional approach photography The differences between realism and abstraction, and the possibilities and limitations of each Learning to expand your own seeing and creativity through classes, workshops, and associating with other photographers Why the rules of composition should be ignored How to follow your passion When to listen to the critics and when to ignore them The book is richly illustrated with over 90 photographs taken by Bruce as well as other photographers. Seeing and creativity are difficult to teach, but not impossible. This very different, perhaps groundbreaking book is sure to inspire photographers of all skill levels—from beginners to seasoned professionals—to think deeply about the issues involved in creating successful photographs.

Glass and Water Mark Harris. 2015-07-15 Glass and Water is the first book on underwater photography for freedivers. With contributions from expert underwater photographers this book teaches the skills, knowledge and equipment necessary to successfully pursue underwater photography without scuba gear. Rather than seeking to replace books on underwater photography, Glass and Water focuses on freediving techniques, equipment and photo opportunities. By carefully choosing or adapting freediving and photographic equipment some early hurdles can be avoided. Using appropriate freediving techniques can increase the length of time available for taking photographs underwater. And by being aware of the possibilities, frustrations can be avoided and good subjects sought out. Includes photos and/or contributions from Fred Buyle, Sue Flood, Danny Kessler, Dr Anne-Marie Kitchen-Wheeler, Laura Storm, Andrew Sutton, Shane Wasik, and a Foreword by Dan Bolt. Contents include: Foreword by Dan Bolt; Freediving Equipment for Underwater Photography; Photographic Equipment; Underwater Photography Basics; Challenges and Opportunities for Freedivers; Lungcraft; Finning; Descents and Ascents; Neutral Buoyancy; Hydrodynamics; Safety; Creature by Creature; A Virtual Dive; Behind the Lens. Plus a Glossary of key terms. Reviews 'A very informative book which will help freedivers improve their images... The nicest surprise for me was the "Virtual Dive" chapter. This chapter alone was worth the price of the book... Glass and Water is obviously aimed at freedivers but scuba divers would also benefit from the content of this book': UWP magazine. 'It's most unlikely that you'll come away without learning something brand new and innovative... I'm very impressed indeed': Martin Edge. (Read Martin's full review of Glass and Water here). 'Glass and Water should be as essential as a pair of fins and a camera for underwater photographers. Mark shares his tremendous expertise ... the methodical and well-illustrated techniques will benefit anyone wishing to produce great images in the sea': Brian Skerry.

3D Recording and Interpretation for Maritime Archaeology John K. McCarthy,Jonathan Benjamin,Trevor Winton,Wendy van Duivenvoorde.2019-03-06 This open access peer-reviewed volume was inspired by the UNESCO UNITWIN Network for Underwater Archaeology International Workshop held at Flinders University, Adelaide, Australia in November 2016. Content is based on, but not limited to, the work presented at the workshop which was dedicated to 3D recording and interpretation for maritime archaeology. The volume consists of contributions from leading international experts as well as up-and-coming early career researchers from around the globe. The content of the book includes recording and analysis of maritime archaeology through emerging technologies, including both practical and theoretical contributions. Topics include photogrammetric recording, laser scanning, marine geophysical 3D survey techniques, virtual reality, 3D modelling and reconstruction, data integration and Geographic Information Systems. The principal incentive for this publication is the ongoing rapid shift in the methodologies of maritime archaeology within recent years and a marked increase in the use of 3D and digital approaches. This convergence of digital technologies such as underwater photography and photogrammetry, 3D sonar, 3D virtual reality, and 3D printing has highlighted a pressing need for these new methodologies to be considered together, both in terms of defining the state-of-the-art and for consideration of future directions. As a scholarly publication, the audience for the book includes students and researchers, as well as professionals working in various aspects of archaeology, heritage management, education, museums, and public policy. It will be of special interest to those working in the field of coastal cultural resource management and underwater archaeology but will also be of broader interest to anyone interested in archaeology and to those in other disciplines who are now engaging with 3D recording and visualization.

Winning Images with Any Underwater Camera Paul Colley.2014-05-29 'This book will arm and inspire you to transform your underwater photographs, whatever camera you use': Alex Mustard (from the Foreword) The best underwater images don't just capture the subject well, they also capture mood, emotion and atmosphere. Unlike most other underwater photography books, *Winning Images with Any Underwater Camera* focuses on composition and techniques rather than the all-consuming camera technology that people tend to chase first. This makes it a supremely cost-effective tool for improving images; and there is no discrimination between users of different camera systems — this truly is a book for all. International award winner and instructor Paul Colley reveals the short cuts and shows the vital bits of artistic theory as it applies to underwater photography, grappling with composition in much greater depth than in other books. He also includes easy-to-remember reference models for underwater composition: pre-planned concepts for twelve typical underwater scenes, with the principal considerations boiled down to those essentials that will help you achieve great results, time and again.

Machine Vision for the Inspection of Natural Products Mark Graves,Bruce Batchelor.2006-05-18 Machine vision technology has revolutionised the process of automated inspection in manufacturing. The specialist techniques required for inspection of natural products, such as food, leather, textiles and stone is still a challenging area of research. Topological variations make image processing algorithm development, system integration and mechanical handling issues much more complex. The practical issues of making machine vision systems operate robustly in often hostile environments together with the latest technological advancements are reviewed in this volume. Features: - Case studies based on real-world problems to demonstrate the practical application of machine vision systems. - In-depth description of system components including image processing, illumination, real-time hardware, mechanical handling, sensing and on-line testing. - Systems-level integration of constituent technologies for bespoke applications across a variety of industries. - A diverse range of example applications that a system may be required to handle from live fish to ceramic tiles. *Machine Vision for the Inspection of Natural Products* will be a valuable resource for researchers developing innovative machine vision systems in collaboration with food technology, textile and agriculture sectors. It will also appeal to practising engineers and managers in industries where the application of machine vision can enhance product safety and process efficiency.

Action Camera Underwater Video Basics Jeff Goodman. 2021-10-26 Action Camera Underwater Video Basics shows how to capture fantastic video and turn it into engaging sequences. The book focuses on small action cameras - the format which includes devices made by GoPro, SeaLife and Paralenz - all of which have more depth to them than one might first imagine. Award-winning underwater cameraman Jeff Goodman shows how versatile they can be and how to get the best out of them. Every one of the 200+ images in the book was shot with an action camera. The book looks at important camera features and cuts through the dizzying array of equipment choices. Homing in on what is useful for underwater videoing, Jeff then provides the vital background knowledge key to achieving great results, time after time, whatever device you use: How to avoid the typical mistakes made by many budding underwater filmmakers. Capture better shots and turn them into engaging sequences. An introduction to the editing process - simple techniques to make the best videos. Jeff also explains how to use action cameras to take better underwater stills, both in the water and later from the video which has been shot. The book concludes with two exercises that put the theory into

practice. Although technology moves on at a pace, some things will always remain true. Nowadays shooting exclusively with tiny action cameras, Jeff shares a lifetime of essential underwater video know-how in one handy book.

The Diver's Tale Nick Lyon.2019-02-22 The Diver's Tale is an unvarnished account of real British diving, based on the author's 40+ year experience. Britain is an island nation so, unsurprisingly, scuba diving is a popular British pastime enjoyed by some 50,000 keen participants and just as many of the armchair variety. A carefully-structured programme of training ensures that the British diver is well-prepared for the challenging conditions which may be encountered beneath our seas. Or does it? How many trainee divers were taught about the perils of high-speed testicular trauma during descent? Or the dangers of having sex in a tent with a deaf person? Why bacon should be in your first aid kit. How to build a space shuttle using salvaged ammunition? Or why the name Valerie is so very special? During a 40 year plus odyssey through the strange and exotic world of British diving, Nick Lyon and his disparate collection of buddies have answered all these questions from personal experience, and many more besides. It may not be pretty, it may not be painless but to those in the know, it's real British diving. From ill-fitting homemade wetsuits to technical closed-circuit rebreather diving, this book is an insight into the 'glamour' and history of scuba diving in the UK by a man who has done it all. The Diver's Tale is not a diving manual — quite the opposite. How not to do it, why not to do it, when not to do it and who not to do it with. Amusing, frequently embarrassing, often unpleasant and occasionally tragic, the book plunges into the world of the real British diver! Now re-edited and brought back up to date, with a new chapter and a Foreword by Andy Torbet. Acclaim for The Diver's Tale 'When it comes to celebrating the depressive/compulsive nature of the British diving condition, there is no writer like the talented Mr Lyon... I cannot recommend it highly enough' — SCUBA. 'I found it utterly absorbing and so did my budgie, Cyril, as it fitted perfectly in the bottom of his cage' — Alex 'Woz' Warzynski, Chairman of the BSAC. 'A breath-taking triumph that must take its place at the very pinnacle of diving literature, above Cousteau and all them lot. Now will you delete the photos?' — Helen Hadley, Co-owner Orkney and Shetland Charters.
