This book examines these attitudes in turn and compares these hedging methods through worked examples. Also included is an analysis of accounting and tax implications. This expansive new range of risk management texts has undergone extensive re-writing to give each book in the series an international perspective. Each explains and analyses core aspects of risk assessment and management in a way invaluable to students and useful to practitioners. All of these titles adopt a practical and clear approach to their subject. All are fully updated versions of a series of books previously produced by training experts at BPP.

Mustang the Inspiration Philip Kaplan.2023-05-30 If it looks right, it will probably fly right. A tired old saying among airmen, but one that persists. Think if you will of the handful of airplanes that most people would probably agree are the best-looking examples of all. The list is short but distinguished and the proof is in the enthusiastic common view of most pilots who have flown them for nearly all, it was love at first sight and first flight. For most that little list includes the Vickers-Supermarine Spitfire, the Douglas DC-3, the Hawker Hunter, the Lockheed Constellation, the Concord, and the North American Mustang. Of these, the Spitfire and Mustang stand out and remain extra special to the majority of pilots who have been privileged to fly them. One common thread exists among those who have experienced both of these fine machines; an opinion that seems to hold up even after a lifetime of flying the best the aviation design community has created. While the Spitfire may have a slight edge in light-touch handling, if I have to go to war in one type, Ill take the Mustang every time. This comprehensive account of the Mustang aircraft charts the operational history of the craft and also relays a the personal stories and experiences of the men who flew the 'Cadillac of the skies' as it has been described. A vivid and enthralling history set to appeal to aviation enthusiasts looking for more than just a mere operational history of the Mustang's exploits.

Technology Computer Aided Design Chandan Kumar Sarkar.2018-09-03 Responding to recent developments and a growing VLSI circuit manufacturing market, Technology Computer Aided Design: Simulation for VLSI MOSFET examines advanced MOSFET processes and devices through TCAD numerical simulations. The book provides a balanced summary of TCAD and MOSFET basic concepts, equations, physics, and new technologies related to TCAD and MOSFET. A firm grasp of these concepts allows for the design of better models, thus streamlining the design process, saving time and money. This book places emphasis on the importance of modeling and simulations of VLSI MOS transistors and TCAD software. Providing background concepts involved in the TCAD simulation of MOSFET devices, it presents concepts in a simplified manner, frequently using comparisons to everyday-life experiences. The book then explains concepts in depth, with required mathematics and program code. This book also details the classical semiconductor physics for understanding the principle of operations for VLSI MOS transistors, illustrates recent developments in the area of MOSFET and other electronic devices, and analyzes the evolution of the role of modeling and simulation of MOSFET. It also provides exposure to the two most commercially popular TCAD simulation tools Silvaco and Sentaurus. • Emphasizes the need for TCAD simulation to be included within VLSI design flow for nano-scale integrated circuits • Introduces the advantages of TCAD simulations for device and process technology characterization • Presents the fundamental physics and mathematics incorporated in the TCAD tools • Includes popular commercial TCAD simulation tools (Silvaco and Sentaurus) • Provides characterization of performances of VLSI MOSFETs through TCAD tools • Offers familiarization to compact modeling for VLSI circuit simulation R&D cost and time for electronic product development is drastically reduced by taking advantage of TCAD tools, making it indispensable for modern VLSI device technologies. They provide a means to characterize the MOS transistors and improve the VLSI circuit simulation procedure. The comprehensive information and systematic approach to design, characterization, fabrication, and computation of VLSI MOS transistor through TCAD tools presented in this book provides a thorough foundation for the development of models that simplify the design verification process and make it cost effective.

Connecting Histories Christopher E. Goscha,Christian F. Ostermann.2009 Connecting Histories: Decolonization and the Cold War in Southeast Asia draws on newly available archival documentation from both Western and Asian countries to explore decolonization, the Cold War, and the establishment of a new international order in post-World War II Southeast Asia. Major historical forces intersected here--of power, politics, economics, and culture--on trajectories East to West, North to South, across the South itself, and along less defined tracks. Especially important, democratic-communist competitions sought the loyalties of Southeast Asian nationalists, even as some colonial powers sought to resume their prewar dominance. These intersections are the focus of the contributions to this book, which use new sources and approaches to examine some of the most important historical trajectories of the twentieth century in Burma, Vietnam, Malaysia, and a number of other countries.

Handbook of Optimization Theory Juan Varela,Sergio Acuña.2011 Several problems in modern genome mapping analysis belong to the field of discrete optimisation on a set of all possible orders. In this book, formulations, mathematical models and algorithms for genetic/genomic mapping problem that can be formulated in TSP-like terms are proposed. Since the 1960s, Operational Research techniques have extensively been developed to support organisations in their Manpower Planning challenge -- a fundamental aspect of Human Resource Management in organisations. This book reviews the techniques and alternative approaches that have been introduced in Manpower Planning (e.g., simulation techniques), and in general, the Markov Chain Theory. Furthermore, the authors of this book propose a new class of strategies for giving the optimal inventory replenishments for each retailer. In addition, the authors demonstrate how to increase the usage of iterative methods in all possible fields by accelerating such solvers using Reconfigurable Hardware. An optimisation method for material layout of incompressible rubber components is presented as well. Other chapters in this book use a generic approach to study minimisation problems on a complete metric space, provide a novel design method in the case of an output feedback suboptimal control problem, derive Levy process-based models of jump diffusion-type for banking operations involving securitisation, capital and profitability, and investigate the optimality of the loan securitisation process that has had a prominent role to play in the sub-prime mortgage crisis (SMC).
