The Internal Threat Stacey L Tyler.2020-10-21 Have you ever wondered when going through security, Transportation Security Administration (TSA), how those pictures of weapons and other objects made it through security undetected? When going through those metal detectors, have you ever questioned if they really work? Or why certain people get patted down and some do not? Is it random? This book is not only going to reveal some shocking truths but makes you think long and hard about our national aviation security and how we are being manipulated to feel secure in a veil of deception. Let us start with the frontline employees as they are misusing their privileges by compromising airport security policies and procedures by funneling contraband, weapons, drugs, and prohibited items through security checkpoints and/or employee access points. Did you know that? September 11 gave the national aviation industry a huge sense of protection by imposing security taxes on the public traveling tickets to support the newly created agencies namely the Department of Homeland Security (DHS) and the Transportation Security Administration (TSA). The 9/11 terrorist attacks took a major toll on the aviation industry creating multiple mergers and bankruptcies which caused the remaining airlines and airports an ulterior means for survival. Reduce overhead and succumb to contracting out the frontline workforce to independent contractors. This course of action also diminished the rigorous training frontline employees need with strict requirements of policies, processes, and compliance. Not to mention recurrent training to ensure the traveling public safe. In this book, *The Internal Threat: The Community Behind the Security Checkpoint*, Dr. Stacey Tyler provides a qualitative study on the central research question that focuses on the degree to which miscommunication between TSA, airlines, and airport employees has an impact on the implementation of changes in airport security policies, particularly those regarding prohibited items that pass through security checkpoints. This behavior impacts the effective execution of airport security policies by federal law regarding carryon baggage on commercial aircraft that is specifically known as the Internal Threat.

Aviation Security Management [3 volumes] Andrew R. Thomas.2008-10-30 Because of 9/11, there is universal recognition that aviation security is a deadly serious business. Still, around the world today, the practice of aviation security is rooted in a hodgepodge of governmental rules, industry traditions, and local idiosyncrasies. In fact, nearly seven years after the largest single attack involving the air transport industry, there remains no viable framework in place to lift aviation security practice out of the mishmash that currently exists. It is the ambitious intent of Aviation Security Management to change that. The goals of this set are nothing less than to make flying safer, to make transporting goods by air safer, and to lay the foundation for the professionalization of this most important field. This dynamic set showcases the most current trends, issues, ideas, and practices in aviation security management, especially as the field evolves in the context of globalization and advances in technology. Written by leading academic thinkers, practitioners, and former and current regulators in the field, the three volumes highlight emerging and innovative practices, illustrated with examples from around the world. Volume 1 takes a penetrating look at the overall framework in which aviation security management has taken place in the past and will likely do so in the foreseeable future. It covers the major areas of focus for anyone in the aviation security business, and it provides a basis for educational programs. Volume 2 delves into the emerging issues affecting aviation security managers right now. Volume 3: Perspectives on Aviation Security Management covers the full spectrum of international aviation security-related issues. It will serve as part of the foundation for the next generation of research in the area in both a business and cultural context. Collectively, these volumes represent the state of the art in the field today and constitute an essential resource for anyone practicing, studying, teaching, or researching aviation security management.

The State of Security at the Department of Energy's Nuclear Weapon Laboratories United States. Congress. House. Committee on Commerce. Subcommittee on Oversight and Investigations.2000

Aircrew Security Clois Williams,Steven Waltrip.2017-03-02 The events of 11 September 2001 changed the world, and in particular the aviation community, forever. Since then, the terrorist threat continues to dominate international air travel and pose a real and present danger to airline passengers and aircrew across the globe. In line with this, expectations of renewed commitments to aircrew security training increased, however the practical reality of the standard of information and effective training often fell short. This book aims to help redress this problem. Intended to help flight crews' deal with the new complexities they face in the skies, it is designed to inform and enlighten crewmembers on the issues posed by air rage and terrorist activities, using techniques for conflict resolution, assessment of threat, mental and physical preparation and post-incident considerations. The culmination of work accomplished from a lifetime of employment in aviation, security and training, the authors use a progressive approach to explain security issues from a flight crewmember's perspective. Using detailed studies of current airline security practice, verified by

interviews with crewmembers worldwide, the book uncovers many of the shortcomings of international aviation security and presents plausible and innovative solutions to the problems crewmembers face. Having worked with aviation industry leaders, regulatory authorities, major airlines and flight training organizations, the authors provide a unique blend of guidance, useful to the development of security programs for crewmembers by airlines, corporations and air charter companies. Government agencies commissioned with overseeing and developing aircrew security can also use the book when seeking a better understanding of the needs of crewmembers and airlines. Readership includes: Airline flight crewmembers (pilots, flight engineers and flight attendants); major universities and colleges with aviation programs; members of organizations such as the Airline Transport Association, International Airline Transport Association, World Airline Transport Association, Flight Safety Foundation, Pilot and Flight Attendant labor unions as well as government agencies.

Airline Passenger Security Screening National Research Council,Division on Engineering and Physical Sciences,National Materials Advisory Board,Commission on Engineering and Technical Systems,Panel on Passenger Screening,Committee on Commercial Aviation Security.1996-07-19 This book addresses new technologies being considered by the Federal Aviation Administration (FAA) for screening airport passengers for concealed weapons and explosives. The FAA is supporting the development of promising new technologies that can reveal the presence not only of metal-based weapons as with current screening technologies, but also detect plastic explosives and other non-metallic threat materials and objects, and is concerned that these new technologies may not be appropriate for use in airports for other than technical reasons. This book presents discussion of the health, legal, and public acceptance issues that are likely to be raised regarding implementation of improvements in the current electromagnetic screening technologies, implementation of screening systems that detect traces of explosive materials on passengers, and implementation of systems that generate images of passengers beneath their clothes for analysis by human screeners.

Security of Air Cargo During Ground Transportation (Redacted) Richard L. Skinner.2011 This is a print on demand edition of a hard to find publication. This report addresses the effectiveness of the Transport. Security Admin's. (TSA) efforts to secure air cargo while it is handled or transported on the ground, prior to being shipped on passenger aircraft. Conclusions: Personnel were accessing, handling, or transporting air cargo without the required background checks or training. Also, 23% of drivers did not satisfy the required training and testing requirements. Automated tools to assist inspectors in analyzing results and focusing on high-risk areas in air cargo security were not adequate. As a result, air cargo is vulnerable to the intro. of explosives and other destructive items before it is loaded onto planes. The report makes six recommendations to strengthen the security of air cargo during ground transportation.

Aviation Security U S Government Accountability Office (G,U. S. Government Accountability Office (.2013-06 Pursuant to a congressional request, GAO: (1) evaluated the Federal Aviation Administration's (FAA) methodology for assessing security at foreign airports, focusing on those airports at high risk of terrorist and other criminal activities; and (2) provided information on how the Department of State used its Anti-Terrorism Assistance Program funds to enhance foreign airport security. GAO found that: (1) FAA revised its foreign airport assessment guidance in 1987 to promote more comprehensive documentation of compliance with International Civil Aviation Organization (ICAO) standards, an inspection team approach, and

increased rapport between inspectors and foreign security officials; (2) FAA inspectors interviewed various foreign government, airport, and security officials, observed various security measures, and toured airport perimeters to assess airport security; (3) FAA inspectors did not test the operational effectiveness of security systems or observe and evaluate the security tests conducted by foreign airport officials; and (4) FAA conducted about 600 assessments of 200 airports during 1986 and 1987, concluded that most airports met ICAO standards, and suggested 100 security enhancements at 33 of the 54 highest-threat airports. GAO also found that: (1) through fiscal year 1987, State's Anti-Terrorism Assistance Program provided aviation security training to about 500 persons from 19 countries and provided aviation security equipment worth \$2.8 million to 18 countries; and (2) State generally provided such training through requests from foreign governments, since FAA did not formally notify State of specifics on training needs identified during security assessments.
