When Laine Forrester travels overseas to attend her best friend's vineyard wedding, she expects to find the bride on the brink of a fairy-tale life. But after a series of unforeseen setbacks, it seems the storybook lives they'd imagined are suddenly ripping apart. With hopes of resurrecting a happy ending, Laine agrees to accompany the newlyweds to the groom's home in Ireland—never expecting she'd be the one drawn in by its wide-open moors, backroads bordering the Irish Sea, and a mysterious castle that dares to keep its secrets hidden. From the storied streets of Dublin to the shores of the Emerald Isle, Laine is drawn in to the land and its rich history. **The CSDP in 2020** Daniel Fiott.2020 The past 20 years of the Common Security and Defence Policy have taught us more about the EU as an international actor. While the Union has not entirely lived up to the ambitions set down by European ministers at the Helsinki European Council in December 1999, the EU has developed the ability to deploy civilian and military missions and operations. In more recent years, the EU has advanced cooperation on defence through the EU Global Strategy with a

range of new tools. Looking back over the last 20 years of CSDP, this book provides an analytical overview of the key historical developments and critically appraises the successes and failures charted over two decades. A host of leading think tank analysts and a senior EU official look at issues such as institutional design, operations and missions, capabilities, industry and civilian crisis management. The book is not just a historical record, however: several chapters look at the geopolitical challenges facing the EU. The contributors look at emerging security challenges, the nature of permissibility, the internal-external security nexus, the defence industry and civilian CSDP. Together, the chapters underline the need for the EU to match its rhetoric on security and defence with capabilities and political ambition.

Rare-earth Iron Permanent Magnets J. M. D. Coey.1996 Rare-earth iron permanent magnets combine the magnetization of iron or cobalt with the anisotropy of a light rare-earth in intermetallic compounds which exhibit nearly ideal hysteresis. The rare-earth iron magnets are indispensable components in a vast range of electronic and electromechanical devices. This book covers the principles of permanent magnetism, magnet processing, and applications in a series of interlocking chapters written by experts in each area. Based on the findings of the Concerted European Action on Magnets, it is a definitive account of the field, designed to be read by physicists, materials scientists, and electrical engineers.

**Cure Models** Yingwei Peng, Binbing Yu. 2021-03-23 Cure Models: Methods, Applications and Implementation is the first book in the last 25 years that provides a comprehensive and systematic introduction to the basics of modern cure models, including estimation, inference, and software. This book is useful for statistical researchers and graduate students, and practitioners in other disciplines to have a thorough review of modern cure model methodology and to seek appropriate cure models in applications. The prerequisites of this book include some basic knowledge of statistical modeling, survival models, and R and SAS for data analysis. The book features real-world examples from clinical trials and population-based studies and a detailed introduction to R packages, SAS macros, and WinBUGS programs to fit some cure models. The main topics covered include the foundation of statistical estimation and inference of cure models for independent and right-censored survival data, cure modeling for multivariate, recurrent-event, and competing-risks survival data, and joint modeling with longitudinal data, statistical testing for the existence and difference of cure rates and sufficient follow-up, new developments in Bayesian cure models, applications of cure models in public health research and clinical trials.

Theory of Magnetostatic Waves Daniel D Stancil. 2012-12-06 Magnetic materials can support propagating waves of magnetization; since these are oscillations in the magnetostatic properties of the material, they are called magnetostatic waves (sometimes magnons or magnetic polarons). Under the proper circumstances these waves can exhibit, for example, either dispersive or nondispersive, isotropic or anisotropic propagation, nonreciprocity, frequency-selective nonlinearities, soliton propagation, and chaotic behavior. This rich variety of behavior

has led to a number of proposed applications in microwave and optical signal processing. This textbook begins by discussing the basic physics of magnetism in magnetic insulators and the propagation of electromagnetic waves in anisotropic dispersive media. It then treats magnetostatic modes, describing how the modes are excited, how they propagate, and how they interact with light. There are problems at the end of each chapter; many of these serve to expand or explain the material in the text. To enhance the book's usefulness as a reference, the answers are given for many of the problems. The bibliographies for each chapter give an entry to the research literature. Magnetostatic Waves will thus serve not only as an introduction to an active area of research, but also as a handy reference for workers in the field.

The Antichrist and Ecce Homo Friedrich Nietzsche.2020-11-26 The Antichrist: Is probably the most well-known work of German Philosopher Friedrich Nietzsche. He used this book to speak on his disdain for organized religion. One of his most talked about and enduring lines from the book is 'God is dead.' He believed that people should not turn to traditional Christian values but more toward science or nationalism. Nietzsche's title, The Antichrist, had less to do with the Bible and more to do with his view of the 'slave morality' of Western Christianity.The Antichrist goes on to say that Christianity put weakness where virtue should be. He felt that the civilization was moved to feel sorry for people and that sentiment made people weaker. He felt the best course of action was strength. If people could be stronger through self-reliance and things that were tangible, then society as a whole

could be stronger. Nietzsche believed that each person should make their own way through individual experience. He felt that this goal should not be an aspiration that a person should hope to achieve, but one that should be lived in daily life. *Ecce Homo*: In late 1888, only weeks before his final collapse into madness, Nietzsche (1844-1900) set out to compose his autobiography, and *Ecce Homo* remains one of the most intriguing yet bizarre examples of the genre ever written. In this extraordinary work Nietzsche traces his life, work and development as a philosopher, examines the heroes he has identified with, struggled against and then overcome - Schopenhauer, Wagner, Socrates, Christ - and predicts the cataclysmic impact of his 'forthcoming revelation of all values'. Both self-celebrating and self-mocking, penetrating and strange, *Ecce Homo* gives the final, definitive expression to Nietzsche's main beliefs and is in every way his last testament.

**High Density Digital Recording** K.H.J Buschow, G.J Long, F. Grandjean. 2012-12-06 High density digital magnetic and magneto-optical storage devices are widely used in audio, video, and data processing information technology, as well as in CAD/CAM computer systems. These widespread uses generate a continually increasing demand for both increased information storage densities and capacities, and for reduced access times. Hence, the materials engineering of high density storage media, with a high signal to noise ratio, and the associated design of sophisticated read and write heads, form the basis of major technological research. This research is especially complex because, ideally, the recorded information should be both erasable and, at the same time, secure and accessible over periods of many decades. As a result, research on these complex problems requires a multidisciplinary approach which utilizes the expertise in such widely differing fields as organic, inorganic, and solid state chemistry, metallurgy, solid state physics, electrical and mechanical engineering, and systems analysis. Often, further research specialization is necessary in each of these different

disciplines. For instance, solid state physics and chemistry address the problems of crystallographic structure and phase diagram determination, magnetism, and optics, but more advanced research methods, such as high resolution electron microscopy and electronic band structure calculations, are necessary to understand the microstructure of particulate recording media or the electronic spectra of magneto-optical recording media.

### **Large Space Structures: Dynamics and Control** S.N.

Atluri,A.K. Amos.2012-12-06 This monograph is intended to provide a snapshot of the status and opportunities for advancement in the technologies of dynamics and control of large flexible spacecraft structures. It is a reflection of the serious dialog and assessments going on all over the world, across a wide variety of scientific and technical disciplines, as we contemplate the next major milestone in mankind's romance with space: the transition from exploration and experimentation to commercial and defense exploitation. This exploitation is already in full swing in the space communications area. Both military and civilian objectives are being pursued with increasingly more sophisticated systems such as large antenna reflectors with active shape control. Both the NATO and Warsaw pact alliances are pursuing permanent space stations in orbit: large structural systems whose development calls for in-situ fabrication and/or assembly and whose operation will demand innovations in controls technology. The last ten years have witnessed a fairly brisk research activity

in the dynamics and control of large space structures in order to establish a technology base for the development of advanced spacecraft systems envisioned for the future. They have spanned a wide spectrum of activity from fundamental methods development to systems concept studies and laboratory experimentation and demonstrations. Some flight experiments have also been conducted for various purposes such as the characterization of the space environment, durability of materials and devices in that environment, assembly and repair operations, and the dynamic behavior of flexible structures. It is this last area that has prompted this monogram.

*The Rejection of Consequentialism* Samuel Scheffler. 1994-08-11

In contemporary philosophy, substantive moral theories are typically classified as either consequentialist or deontological. Standard consequentialist theories insist, roughly, that agents must always act so as to produce the best available outcomes overall. Standard deontological theories, by contrast, maintain that there are some circumstances where one is permitted but not required to produce the best overall results, and still other circumstances in which one is positively forbidden to do so. Classical utilitarianism is the most familiar consequentialist view, but it is widely regarded as an inadequate account of morality. Although Professor Scheffler agrees with this assessment, he also believes that consequentialism seems initially plausible, and that there is a persistent air of paradox surrounding typical deontological views. In this book, therefore, he undertakes to reconsider the rejection of consequentialism. He argues that it is possible to provide a rationale for the view that agents need not always produce the best possible overall outcomes, and this motivates one departure from consequentialism; but he shows that it is surprisingly difficult to provide a satisfactory rationale for the view that there are times when agents must not produce the best possible overall outcomes. He goes on to argue for a hitherto neglected type of moral conception, according to which

agents are always permitted, but not always required, to produce the best outcomes.

**An Introduction to Differential Manifolds** Jacques

Lafontaine.2015-07-29 This book is an introduction to differential

manifolds. It gives solid preliminaries for more advanced topics:

Riemannian manifolds, differential topology, Lie theory. It

presupposes little background: the reader is only expected to master basic differential calculus, and a little point-set topology.

The book covers the main topics of differential geometry:

manifolds, tangent space, vector fields, differential forms, Lie

groups, and a few more sophisticated topics such as de Rham

cohomology, degree theory and the Gauss-Bonnet theorem for surfaces. Its ambition is to give solid foundations. In particular,

the introduction of “abstract” notions such as manifolds or

differential forms is motivated via questions and examples from

mathematics or theoretical physics. More than 150 exercises,

some of them easy and classical, some others more sophisticated, will help the beginner as well as the more expert reader.

Solutions are provided for most of them. The book should be of

interest to various readers: undergraduate and graduate students

for a first contact to differential manifolds, mathematicians from

other fields and physicists who wish to acquire some feeling

about this beautiful theory. The original French text *Introduction*

*aux variétés différentielles* has been a best-seller in its category

in France for many years. Jacques Lafontaine was successively

assistant Professor at Paris Diderot University and Professor at

the University of Montpellier, where he is presently emeritus. His

main research interests are Riemannian and pseudo-Riemannian

geometry, including some aspects of mathematical relativity.

Besides his personal research articles, he was involved in several

textbooks and research monographs.

**East West Street** Philippe Sands.2017-07-11 A profound, important book, a moving personal detective story and an uncovering of secret pasts, set in Europe's center, the city of bright colors—Lviv, Ukraine, dividing east from west, north from south, in what had been the Austro-Hungarian Empire. A book that explores the development of the world-changing legal concepts of “genocide” and “crimes against humanity” that came about as a result of the unprecedented atrocities of Hitler's Third Reich. It is also a spellbinding family memoir, as the author traces the mysterious story of his grandfather as he maneuvered through Europe in the face of Nazi atrocities. This is “a monumental achievement ... told with love, anger and precision” (John le Carré, acclaimed internationally bestselling author). *East West Street* looks at the personal and intellectual evolution of the two men who simultaneously originated the ideas of “genocide” and “crimes against humanity,” both of whom, not knowing the other, studied at the same university with the same professors, in “the Paris of Ukraine,” a major cultural center of Europe, a city variously called Lemberg, Lwów, Lvov, or Lviv. *EU Security Strategies* Spyros Economides, James Sperling. 2017-12-06 This volume offers a coherent analysis of the European Union's security strategies within a comparative framework. If the EU is to survive and prosper as an effective security actor, it requires that greater attention be devoted to taking a cohesive and common position on the relationship between EU foreign policy means and goals. The major claim of this edited collection is that there is a European grand security strategy that disciplines member state security strategies. That grand strategy has two distinct substantive goals: (1) the preservation and expansion of the EU system of security governance; and (2) the implementation of specific strategies to meet internal and external threats and sources of insecurity. The EU has sought to develop a grand security strategy that not only accounts for the proliferation of threats possessing a military or non-military character and differentiates between core and peripheral regions of interest, but also addresses the requirements to bridge the increasingly blurred boundary between internal and external security threats and the necessary reconciliation of the competing security preferences of its member states. The empirical contributions to this volume examine the EU security strategies for specific issue areas and regional threat complexes. These case studies assess whether and how those strategies have consolidated or expanded the EU system of security governance, as well as their successes and limitations in meeting the security threats confronting the EU and its member-states. This volume will be of great interest to students of EU policy, foreign policy, security studies and IR.

Fuels and Engines Jean-Claude Guibet, Emmanuelle Faure-Birchem. 1999 Today, more than ever, the subject of fuels and engines arouses keen interest and provokes lively debate among specialists and the general public. This book describes in extensive detail the new technologies that are currently in use or under development that are designed to provide high-quality fuels and ensure their optimal use in the engines used to power automobiles, trucks, aircraft, and ships. All types of fuels are covered: gasoline, diesel fuels, liquefied petroleum gas, natural gas, biofuels, jet fuels, and fuels for special uses. The specific situations encountered in each region of the world, including the United States, Europe, Japan, and the developing countries, are analyzed and compared, with a focus on energy, economics, and politics. This book is a scientific work, yet easy to read; it is objective, yet actively involved. It is thus an excellent reference work for those seeking pertinent, reliable, and comprehensive information on the subject of fuels and engines.

*My Journey from Paris to Java* Honoré de Balzac.2010 In this delightful little volume, Honoré de Balzac, the renowned 19th century French novelist and playwright, takes readers on a short fantasy journey to the mystical island of Java where he - or rather the narrateur - encounters a deadly poison-breathing tree, civilized monkeys, a love-sick sparrow, and the epitome of Oriental desirability of the day - the women of Java.

*Analysis of Survey Data* R. L. Chambers,C. J. Skinner.2003-08-01 This book is concerned with statistical methods for the analysis of data collected from a survey. A survey could consist of data collected from a questionnaire or from measurements, such as those taken as part of a quality control process. Concerned with the statistical methods for the analysis of sample survey data, this book will update and extend the successful book edited by Skinner, Holt and Smith on 'Analysis of Complex Surveys'. The focus will be on methodological issues, which arise when applying statistical methods to sample survey data and will discuss in detail the impact of complex sampling schemes. Further issues, such as how to deal with missing data and measurement of error will also be critically discussed. There have significant improvements in statistical software which implement complex sampling schemes (eg SUDAAN, STATA, WESVAR, PC CARP ) in the last decade and there is greater need for practical advice for

those analysing survey data. To ensure a broad audience, the statistical theory will be made accessible through the use of practical examples. This book will be accessible to a broad audience of statisticians but will primarily be of interest to practitioners analysing survey data. Increased awareness by social scientists of the variety of powerful statistical methods will make this book a useful reference.

Collective Securitisation and Security Governance in the European Union Sonia Lucarelli, James Sperling, Mark Webber. 2020-06-04

Collective Securitisation and Security Governance in the European Union presents an integrated theory of collective securitisation – a theoretical foundation for explaining how the process of collective securitisation sustains and makes effective an identifiable system of regional security governance. The volume demonstrates the empirical utility of collective securitisation in the EU security space through a set of structured case studies focusing on the collective securitisation of terrorism, cyberspace, migration, energy, health and climate change. The contributions to this collection address three questions: Under what conditions does collective securitisation occur? How does collective securitisation affect the scope and domains of EU security governance? And how does collective securitisation explain the emergence of the EU system of security governance? This volume breaks new ground in the field of EU security studies and provides a theoretical orientation that contributes to our understanding of how and why the EU has developed as a security actor in the 21st century. Developing and testing the theory of collective securitisation with reference to some of the most pressing contemporary security issues, *Collective Securitisation and Security Governance in the European Union* will be of great interest to scholars of the European Union and Security Studies. The chapters were originally published as a special issue of *West European Politics*.

**Facing a World in Crisis** Jiddu Krishnamurti. 2005-03-08 J. Krishnamurti, one of the most beloved and renowned religious teachers of the twentieth century, often taught his students that they must look at the state of the world, with all its violence and conflict, if they are ever to understand themselves. To turn away from world events was for him not to be alive to what life has to teach. *Facing a World in Crisis* presents a selection of talks that Krishnamurti gave on how to live in and respond to troubling and

uncertain times. His message of personal responsibility and the importance of connecting with the broader world is presented in a nonsectarian and nonpolitical way. Direct and ultimately life-affirming, *Facing a World in Crisis* will resonate with readers today who are looking for a new way to understand and find hope in challenging times.

*Glasses and the Vitreous State* Jerzy Zarzycki.1991-07-25 This book provides an up-to-date and comprehensive coverage of the properties of glasses as materials and of the vitreous state in general. **Death Waits in the Dark** Mark Edward Langley.2020-08-04 It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained

relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

**What Is Africa to Me?** Maryse Condé.2017 What Is Africa to Me? traces the late 1950s to 1968, chronicling Condé's life in Sékou Touré's Guinea to her time in Kwame N'Krumah's Ghana, where she rubbed shoulders with Malcolm X, Che Guevara, Julius Nyerere, and Maya Angelou. Accusations of subversive activity resulted in Condé's deportation from Ghana. Settling down in Sénégal, Condé ended her African years with close friends in Dakar, including filmmakers, activists, and Haitian exiles, before putting down more permanent roots in Paris. --Front flap.
