Infectious Disease Informatics and Biosurveillance Daniel Zeng, Hsinchun Chen, Carlos Castillo-Chavez, William B. Lober, Mark Thurmond. 2010-11-16 This book on Infectious Disease Informatics (IDI) and biosurveillance is intended to provide an integrated view of the current state of the art, identify technical and policy challenges and opportunities, and promote cross-disciplinary research that takes advantage of novel methodology and what we have learned from innovative applications. This book also fills a systemic gap in the literature by emphasizing informatics driven perspectives (e.g., information system design, data standards, computational aspects of biosurveillance algorithms, and system evaluation). Finally, this book attempts to reach policy makers and practitioners through the clear and effective communication of recent research findings in the context of case studies in IDI and biosurveillance, providing “hands-on” in-depth opportunities to practitioners to increase their understanding of value, applicability, and limitations of technical solutions. This book collects the state of the art research and modern perspectives of distinguished individuals and research groups on cutting-edge IDI technical and policy research and its application in biosurveillance. The contributed chapters are grouped into three units. Unit I provides an overview of recent biosurveillance research while highlighting the relevant legal and policy structures in the context of IDI and biosurveillance ongoing activities. It also identifies IDI data sources while addressing information collection, sharing, and dissemination issues as well as ethical considerations. Unit II contains survey chapters on the types of surveillance methods used to analyze

IDI data in the context of public health and bioterrorism. Specific computational techniques covered include: text mining, time series analysis, multiple data streams methods, ensembles of surveillance methods, spatial analysis and visualization, social network analysis, and agent-based simulation. Unit III examines IT and decision support for public health event response and bio-defense. Practical lessons learned in developing public health and biosurveillance systems, technology adoption, and syndromic surveillance for large events are discussed. The goal of this book is to provide an understandable interdisciplinary IDI and biosurveillance reference either used as a standalone textbook or reference for students, researchers, and practitioners in public health, veterinary medicine, biostatistics, information systems, computer science, and public administration and policy.

L'arte della previsione Paolo Massimo Buscema.2020-03-27T00:00:00+01:00 Questo libro è la

storia di come la cultura scientifica stia permeando la cultura umanistica, sapendo che il futuro ha bisogno di entrambe. Vittorio Capecchi, sociologo, intervista Massimo Buscema, tra i maggiori esperti d'Intelligenza Artificiale. Viene delineato un affresco della forza pervasiva dell'Intelligenza Artificiale in diversi campi: linguistica, economia, matematica, antropologia, medicina, sociologia, filosofia, psicologia, criminologia e religione. Non si parla dell'Intelligenza Artificiale oggi di moda (IoT), ma di quella che guarda alla scienza mantenendo sullo sfondo la tecnologia. È un libro controcorrente. Non racconta come il frigorifero parli con il supermercato per fare la spesa, ma tenta di spiegare come “rendere automatico il pensiero”, perché solo attraverso questo tipo di riflessione è possibile far comunicare fra loro “le cose”, dotandole di un qualche grado d'intelligenza. Buscema afferma: “Il pensiero non sembra avere una massa, è invisibile anche a ciò che ci sembrava invisibile. Eppure, anche senza massa, i pensieri si attraggono tra loro. [...] L'Intelligenza Artificiale mira a [...] catturare il nocciolo duro di ciò che completa il mondo della materia”. Il libro racconta anche la storia di un centro ricerche, il Semeion, attraverso gli occhi di coloro che lo frequentano e l'hanno fatto esistere, un piccolo miracolo italiano che dura da 35 anni.

Smart Use of State Public Health Data for Health Disparity Assessment Ge Lin, Ming Qu. 2018-09-03

Health services are often fragmented along organizational lines with limited communication among the public health-related programs or organizations, such as mental health, social services, and public health services. This can result in disjointed decision making without necessary data and knowledge, organizational fragmentation, and disparate knowledge development across the full array of public health needs. When new questions or challenges arise that require collaboration, individual public health practitioners (e.g., surveillance specialists and epidemiologists) often do not

have the time and energy to spend on them. *Smart Use of State Public Health Data for Health Disparity Assessment* promotes data integration to aid crosscutting program collaboration. It explains how to maximize the use of various datasets from state health departments for assessing health disparity and for disease prevention. The authors offer practical advice on state public health data use, their strengths and weaknesses, data management insight, and lessons learned. They propose a bottom-up approach for building an integrated public health data warehouse that includes localized public health data. The book is divided into three sections: Section I has seven chapters devoted to knowledge and skill preparations for recognizing disparity issues and integrating and analyzing local public health data. Section II provides a systematic surveillance effort by linking census tract poverty to other health disparity dimensions. Section III provides in-depth studies related to Sections I and II. All data used in the book have been geocoded to the census tract level, making it possible to go more local, even down to the neighborhood level.

World Class Teru Clavel.2020-10-06 “An upbeat chronicle of [Clavel’s] children’s school experiences in Hong Kong, Shanghai, and Tokyo...[offering] advice about vetting schools and enriching children’s education.” —Kirkus Reviews “An intriguing volume on the differences in global education.”

—Library Journal A must-read firsthand exploration of why Asian students are outpacing their American counterparts and how to help our children excel in today’s competitive world. When Teru Clavel had young children, she watched her friends and fellow parents vie for spots in elite New York City schools. Instead of losing herself in the intensive applications and interview process, Teru and her family moved to Asia, embarking on a decade-long journey through the public schools of Hong Kong, Shanghai, and Tokyo. These schools were low-tech and bare-bones, with teachers who demanded obedience and order. In Hong Kong, her children’s school was nicknamed The Prison for

its foreboding facilities, yet her three-year-old loved his teachers and his nightly homework. In Tokyo, the students were responsible for school chores, like preparing and serving school lunches. Yet Teru was amazed to discover that her children thrived in these academically competitive cultures; they learned to be independent, self-confident, resilient, and, above all, they developed a deep love of learning. When the family returned to the States, the true culture shock came when the top schools could no longer keep up with her children. Written with warmth and humor, *World Class* is a compelling story about how to inspire children to thrive academically. “Studded with lists of useful tips about choosing schools and hiring tutors, for parents who must advocate for their children and supplement gaps in their educations” (Publishers Weekly) and an insightful guide to set your children on a path towards lifelong success.

Semi-Presidentialism Robert Elgie.2011-08-25 Robert Elgie examines the relationship between semi-presidentialism and democratic performance. There are over 50 countries with a semi-presidential constitution. The book shows that the president-parliamentary sub-type is more likely to be associated with a poorer democratic performance than its premier-presidential counterpart.

Disease Surveillance Joseph S. Lombardo, David L. Buckeridge. 2012-11-09 An up-to-date and comprehensive treatment of biosurveillance techniques With the worldwide awareness of bioterrorism and drug-resistant infectious diseases, the need for surveillance systems to accurately detect emerging epidemics is essential for maintaining global safety. Responding to these issues, Disease Surveillance brings together fifteen eminent researchers in the fields of medicine, epidemiology, biostatistics, and medical informatics to define the necessary elements of an effective disease surveillance program, including research, development, implementation, and operations. The surveillance systems and techniques presented in the text are designed to best utilize modern technology, manage emerging public health threats, and adapt to environmental changes. Following a historical overview detailing the need for disease surveillance systems, the text is divided into the following three parts: Part One sets forth the informatics knowledge needed to implement a disease surveillance system, including a discussion of data sources currently used in syndromic surveillance systems. Part Two provides case studies of modern disease surveillance systems, including cases that highlight implementation and operational difficulties as well as the successes experienced by health departments in the United States, Canada, Europe, and Asia. Part Three addresses practical issues concerning the evaluation of disease surveillance systems and the education of future informatics and disease surveillance practitioners. It also assesses how future technology will shape the field of disease surveillance. This book's multidisciplinary approach is ideal for public health professionals who need to understand all the facets within a disease surveillance program and implement the technology needed to support surveillance activities. An outline of the components needed for a

successful disease surveillance system combined with extensive use of case studies makes this book well-suited as a textbook for public health informatics courses

THE EARLY GRADE READING ASSESSMENT Amber K. Gove, Anna Wetterberg. 2011-09-28 The Early Grade Reading Assessment (EGRA) measures students' progress towards reading. EGRA gauges early literacy skills through a 15-minute individual oral assessment of five fundamental reading skills. RTI worked with education experts to develop the EGRA in 2006, and it has been piloted and implemented in more than 40 countries. This volume aims to take stock of the substantial amount of information and experience generated through the use of EGRA, and to share this knowledge with practitioners, policymakers, and international donors. Chapters cover not only particular applications of the instrument but also put EGRA in the context of broader issues and developments in literacy and education.

Dangerous Or Endangered? Jennifer Tilton. 2010-10-03 Tilton draws on three years of ethnographic research in Oakland, California, one of the nation's most racially diverse cities, to examine how debates over the nature and needs of young people have fundamentally reshaped politics, transforming ideas of citizenship and the state in contemporary America. As parents and neighborhood activists have worked to save and discipline young people, they have often inadvertently reinforced privatized models of childhood and urban space, clearing the streets of children, who are encouraged to stay at home or in supervised after-school programs. Youth activists protest these attempts, demanding a right to the city and expanded rights of citizenship.--Publisher.

Data Sharing for International Water Resource Management: Eastern Europe, Russia and the CIS T. Naff.2013-03-14 The Issues, Conclusions, and Recommendations of the NATO Advanced Research Workshop - Budapest, Hungary July 27 -31, 1997 TIOMAS NAFF University of Pennsylvania 847 Williams Hall Philadelphia, PA 19104-6305 USA tna. /J@sas. upenn. edu 1. The Issues Sharing data and information enables people to think together in solving problems, in building trust essential for cooperative efforts toward sustaining shared vital natural resources, and in avoiding conflict. It is axiomatic that all planning and policy making, not least for environmental and resource sustainability, depend for success on accurate data and information dispensed freely to all who need it, from farmers to heads of state. These maxims are particularly apt when applied to water resources that are international and transboundary. In those circumstances, the need for

cooperation and sharing are acute if the water source is to be managed, distributed, and used equitably and efficiently. In many parts of the world, the collection, management, reporting, and quality of water and environmental data are often so poor and incomplete as to render them useless, or they are treated as security issues and are therefore classified. Either way, wherever those conditions exist, essential planning and policy data and information of good quality are relatively hard to come by. The consequences are high, particularly for effective basin-wide river management and resource sustainability.

Assessing and Improving Student Writing in College Barbara E. Walvoord.2014-07-07 Step-by-step guidance for shaping better writers while keeping faculty workloads manageable Effective communication is a critical skill for many academic disciplines and careers, and so colleges and universities and their faculty members are rightfully committed to improving student writing across the curriculum. Guiding and assessing student writing in classrooms, general education, and departments takes knowledge, planning, and persistence, but it can be done effectively and efficiently. Written in the concise, accessible style Barbara Walvoord is known for, Assessing and Improving Student Writing in College: A Guide for Institutions, General Education, Departments, and Classrooms offers administrators, program chairs, general education leaders, and classroom instructors the guidance they need. The book provides concrete suggestions for how to: Articulate goals for student writing Measure student writing Improve student writing Document that improvement The book begins by addressing four basic concepts: what we mean by writing, what we mean by good writing, how students learn to write, and the purposes of assessment. Next, Walvoord

explains the various approaches and methods for assessing writing, urging a combination of them adapted to the institution's purposes and political context. After this introduction, successive chapters offer realistic, practical advice to institution-wide and general education leaders, department members, and classroom instructors. Walvoord addresses issues such as how to engage faculty, how to use rubrics, how to aggregate assessment information at the department and institutional levels, and how to report assessment information to accreditors. The chapter for classroom instructors offers practical suggestions: how to add more writing to a course without substantially increasing the grading load; how to construct writing assignments, how to make grading and responding more effective and time-efficient, how to address grammar and punctuation, and how to support students whose native language is not English. The book also includes four helpful appendices: a taxonomy of Writing Across the Curriculum (WAC) and Writing in the Disciplines (WID) programs; sample outlines for faculty development workshops; a student survey on teaching methods instructors can use to inform their choices in the classroom; and a student self-check cover sheet designed to help students take ownership of their own learning and responsibility for turning in complete, correct assignments. Practical, step-by-step guidance for each point in the assessment and improvement process creates a cohesive, institution-wide system that keeps students, faculty, and administrators on the same page.

Data Mining Applications Using Artificial Adaptive Systems William J. Tastle.2012-08-27 This volume directly addresses the complexities involved in data mining and the development of new algorithms, built on an underlying theory consisting of linear and non-linear dynamics, data selection, filtering, and analysis, while including analytical projection and prediction. The results derived from the analysis are then further manipulated such that a visual representation is derived

with an accompanying analysis. The book brings very current methods of analysis to the forefront of the discipline, provides researchers and practitioners the mathematical underpinning of the algorithms, and the non-specialist with a visual representation such that a valid understanding of the meaning of the adaptive system can be attained with careful attention to the visual representation. The book presents, as a collection of documents, sophisticated and meaningful methods that can be immediately understood and applied to various other disciplines of research. The content is composed of chapters addressing: An application of adaptive systems methodology in the field of post-radiation treatment involving brain volume differences in children; A new adaptive system for computer-aided diagnosis of the characterization of lung nodules; A new method of multi-dimensional scaling with minimal loss of information; A description of the semantics of point spaces with an application on the analysis of terrorist attacks in Afghanistan; The description of a new family of meta-classifiers; A new method of optimal informational sorting; A general method for the unsupervised adaptive classification for learning; and the presentation of two new theories, one in target diffusion and the other in twisting theory.
