**The Motivated Brain** Gayle Gregory,Martha Kaufeldt.2015-09-17 What really motivates students to learn? What gets them interested—and keeps them interested—in pursuing knowledge and understanding? Recent neuroscientific findings have uncovered the source of our motivation to learn, or as neuroscientist Jaak Panksepp terms it, the drive to seek. Seeking is what gets us out of bed in the morning, the engine that powers our actions, and the need that manifests as curiosity. Informed by new findings on the nature of the brain's seeking system, internationally renowned educators Gayle Gregory and Martha Kaufeldt have identified key brain-friendly strategies for improving student motivation, knowledge acquisition, retention, and academic success. In this book, readers will learn \* The science behind the motivated brain and how it relates to student

learning. \* Strategies for preparing a motivational environment and lesson. \* Strategies for creating engaging learning experiences that capitalize on the brain's natural ways of learning. \* Strategies for improving depth of knowledge, complex thinking, and synthesis to get students into the ever-desired state of flow. \* How attention to the neuroscience of motivation will improve the classroom environment and student learning. The Motivated Brain shows teachers how to harness the power of their students' intrinsic motivation to make learning fun, engaging, and meaningful.

**Advances in Pulmonary Drug Delivery** Philip Chi Lip Kwok, Hak-Kim Chan. 2016-12-19 The respiratory tract has been used to deliver biologically active chemicals into the human body for centuries. However, the lungs are complex in their anatomy and physiology, which poses challenges to drug delivery. Inhaled formulations are generally more sophisticated than those for oral and parenteral administration. Pulmonary drug development is therefore a highly specialized area because of its many unique issues and challenges. Rapid progress is being made and offers novel solutions to existing treatment problems. *Advances in Pulmonary Drug Delivery* highlights the latest developments in this field.

This manual is intended primarily to design engineers, technicians, and electronic students.

**Manual of Neonatal Respiratory Care** Sunil Sinha, Steven M. Donn, MD. 2003-03-28 The first reports of the successful use of mechanical ventilation to treat respiratory disorders in the neonate were published in the 1960s. Subsequent decades have seen the widespread use of ventilation technology, the development of high-frequency ventilation and extracorporeal support, and, most recently, the use of surfactant replacement therapy and synchronized ventilation. Neonatal and pulmonary clinicians now have a wide range of diagnostic and therapeutic tools from which to select a customized management strategy. As a result, the modern neonatal intensive care unit has become a technological wonder, and an occasional source of confusion. Divided into twenty main sections, this book offers a wealth of information to those providing intensive respiratory care to the newborn. Eighty-three separate chapters, written by leaders in their respective fields, cover a comprehensive range of material, including lung development and function, the principles of mechanical ventilation, available diagnostic and therapeutic equipment, strategies for treating various respiratory disorders, alternative treatments, outcomes, and ethical considerations pertaining to the care of newborns. The outline-style presentation is clinically focused, ensuring that all subjects are described in a manner that is easily understood and easily applied to bedside treatment. This manual will be of immense value to all those who come in contact with a neonatal intensive care unit, including pediatricians, neonatologists, pulmonary specialists, respiratory therapists, neonatal nurses and nurse practitioners, fellows, residents, interns, and medical students.

**Manual of Neonatal Respiratory Care** Steven M. Donn, Mark C. Mammel, Anton H.L.C. van Kaam. 2022-05-09 Respiratory care is the largest overall component of neonatal intensive care, and the fifth edition of the *Manual of Neonatal Respiratory Care* is the leading bedside guide for all aspects of respiratory care in the neonatal intensive care unit. Its easy-to-read outline format is simple yet comprehensive and covers all aspects of lung disease in the newborn infant, including embryology, principles of mechanical ventilation, procedures and techniques, monitoring, devices, adjunctive therapies, management of respiratory illness, complications, outcomes, and related issues. The latest edition includes fully revised and updated information, coverage on new equipment and devices, and an expanded authorship to enhance its international appeal. The new edition also features two new co-editors, Dr. Mark Mammel and Dr. Anton Van Kaam, internationally recognized experts in the field who bring a fresh perspective to the manual. Divided into sixteen sections, the book begins with a section on lung development and maldevelopment, specifically covering the development of the respiratory system, malformations, deformations, disorders of the neonatal airway, and developmental lung anomalies. The second section reviews the principles of mechanical ventilation, with coverage on such topics as spontaneous breathing, oxygen therapy, oxygen toxicity, pulmonary mechanics, and ventilator parameters. The third section of the manual outlines procedures and techniques, including neonatal resuscitation, laryngoscopy and endotracheal intubation, and tracheostomy. The following section dives into the monitoring of the ventilated patient, specifically focusing on continuous monitoring techniques, clinical controversies in pulse oximetry, and echocardiography. The next section spotlights noninvasive ventilatory techniques, such as nasal interfaces, humidified high-flow nasal cannula therapy, and sustained inflation. The sixth section of the manual focuses on ventilatory modes and modalities, with coverage on intermittent mandatory ventilation, pressure support ventilation, and pressure control ventilation. The following section segues into high-frequency ventilation, reviewing general concepts, high-frequency jet ventilation, and high-frequency oscillatory ventilation. The eighth section centers around commonly used neonatal ventilators, such as the DRAEGER VN500 ventilator, the AVEA ventilator, and the Twinstream ventilator. The ninth section reviews adjunctive therapies, including hemodynamic support, nutritional support, the use of sedation and analgesia, inhaled nitric oxide therapy, and ECMO. The tenth section shifts gears to spotlight the management of common neonatal respiratory diseases, with chapters on mechanisms of respiratory failure, tissue hypoxia, respiratory distress syndrome, persistent pulmonary hypertension, and pulmonary hypoplasia/agensis among others. Section eleven reviews the etiology, pathogenesis, and management of bronchopulmonary dysplasia, as well as the long-term outcome of newborns with this chronic lung disease. The next section presents complications associated with mechanical ventilation, such as thoracic air leaks, neonatal pulmonary hemorrhage, and neurologic complications. The following two sections spotlights ethical, legal and other considerations, among them nursing care of the ventilated infant, long-term ventilator dependency, home ventilation, withdrawal of ventilatory support, and medical liability and risk management. The fifteenth section focuses on research and literature, with coverage on interpreting medical literature, data collection and assessment of respiratory outcomes, and contemporary classics in neonatal respiratory care. The final section presents ventilatory case studies. The text also features over 300 high-yield radiographic images, figures, tables, and algorithms.

**HADI PRACTICAL NEONATOLOGY BOOK 1** ABDELHADI ABDELGABBAR ABDELHADI. 2024-01-24 *Hadi Practical Neonatology*, a 2-book series of practical guidelines, is intended to provide a structured approach to the management of neonatal conditions which are likely to face the neonatal team. It is not intended to replace textbooks or to teach the beginners in the field. Prior sound knowledge of Neonatal Medicine, by the user, is essential. This book is the first in the series. It covers aspects of RESUSCITATION, THERMAL CONTROL- RESPIRATORY-CARDIOVASCULAR-INFECTIOUS- ENDOCRINE & METABOLIC-GASTROINTESTINAL & NUTRITION- DERMATOLOGY- and SURGICAL NEWBORN challenges. It is my belief that neonatal doctors and nurses are an integrated team, and any demarcation is an imaginary line. The recipe of creating a backbone of good nurses is passionate support, continuous education, and practical teaching at every possible opportunity. Mutual trust and appropriate delegations are crucial to the success of the team. HADI PN series is written for the neonatal team and not just for the medical staff. The best way for consolidating the team knowledge and experience is bedside teaching. New methods and approaches of neonatal management are progressing but seem to slow down over the last few years. This may reflect the fact neonatal advances are approaching our era peak of "what is possible." Nevertheless, many of our current practices are yet to be

scrutinized to fulfil the evidence-based standards. There is no robust verification of the evidence behind our current practice of many routine day to day applications. This include but not limited to fluid requirements, duration of antibiotics courses, use of various blood products, seizures pharmacological treatment, and safe PaCO<sub>2</sub> levels. I have reviewed multiple medical and nursing guidelines from Europe, North America, and Australia as well as Asia, South America, and Africa. I integrated many of these guidelines within this book whenever they are in accord with the international acceptable practices. Feedback and suggestions are welcome and can be sent to [neonatologypractical@gmail.com](mailto:neonatologypractical@gmail.com) The book is an updated version of the protocols and guidelines which I have developed during my work as Consultant Neonatologist. Some are adopted from various reputable institutes and modified to reflect the current evidence plus a slight flavour of my experience. Considerable effort has been exercised to ensure the doses of medications given in HADI PN are accurate. However, further confirmation by the nursing and medical staff is advised prior to the first use of each medication. HADI PN reflects the author's own acceptable and safe practice and advice. It is written with the intention of facilitating the delivery of care to the most vulnerable newborn. The publication is written bearing in mind the wide variations in the skill mix of neonatal practitioners, nurses, and doctors. Likewise, the chall

**Mechanical Ventilation Amid the COVID-19 Pandemic** Amir A. Hakimi, Thomas E. Milner, Govind R. Rajan, Brian J-F Wong. 2022-02-11 The surge in COVID-19 cases leading to hospitalizations around the world quickly depleted hospital resources and reserves, forcing physicians to make extremely difficult life-or-death decisions on ventilator allocation between patients. Leaders in academia and industry have developed numerous ventilator support systems using both consumer- and industry-grade hardware to sustain life and to provide intermediate respiratory relief for hospitalized patients. This book is the first of its kind to discuss the respiratory pathophysiology underlying COVID-19, explain ventilator mechanics, provide and evaluate a repository of innovative ventilator support devices conceived amid the pandemic, and explain both hardware and software components necessary to develop an inexpensive ventilator support device. This book serves both as a historical record of the collaborative and innovative response to the anticipated ventilator shortage during the COVID-19 pandemic and as a guide for physicians, engineers, and DIY'ers interested in developing inexpensive transitory ventilator support devices.

**COVID-19 and Perinatology** Daniele De Luca, Alexandra Benachi. 2023-06-21 COVID19 pandemics has had profound consequences on public health and has represented a challenge for several medical specialties. Despite this was underestimated at the beginning of the outbreak, COVID19 is actually impacting on women and children health, as well. The consequences in this field are multifaceted and complex as they span from the occurrence of COVID19 in pregnant patients, to the possibility of SARS-CoV-2 mother-to-child transmission, the occurrence of neonatal COVID and pediatric sequelae. COVID19 and the related public health measures may also have important consequences on psychological well-being and organization of perinatal care as well as they raise relevant ethical issues. All these aspects were at risk to be forgotten within the many others highlighted by the pandemics but are important both for individual care and also from a political point of view and the organization of care. There is a large demand of high-quality education, information and training in this field and we answered that by organising the COVID19 in Pregnancy and Childhood Days: this book represents the hard legacy of this event with the contribution of key opinion leaders in all the aforementioned specialties. The book is answering a clear need and is directed to: 1) obstetricians, 2) neonatologists, 3) pediatricians, 3) public health specialists, 4) adult critical care physicians, 5) infectious disease specialists, 5) psychologists. Last but not least, the informations resumed in the book are going to be useful for healthcare authorities to program perinatal care and improve it. The book will also serve as textbook for post-graduate courses and academic review resuming the state-of-the art knowledge on this area. Thus, it will be cited and used by researchers in the field: this is not a secondary characteristics as it may be quite difficult to find relevant informations, in this infodemic era, using the usual channels and databases.
