Citizenship and Advocacy in Technical Communication Godwin Y. Agboka, Natalia Matveeva. 2018-06-22 In *Citizenship and Advocacy in Technical Communication*, teachers, researchers, and practitioners will find a variety of theoretical frameworks, empirical studies, and teaching approaches to advocacy and citizenship. Specifically, the collection is organized around three main themes or sections: considerations for understanding and defining advocacy and citizenship locally and globally, engaging with the local and global community, and introducing advocacy in a classroom. The collection covers an expansive breadth of issues and topics that speak to the complexities of undertaking advocacy work in TPC, including local grant writing activities, cosmopolitanism and global transnational rhetoric, digital citizenship and social media use, strategic and tactical communication, and diversity and social justice. The contributors themselves, representing fifteen academic institutions and occupying various academic ranks, offer nuanced definitions, frameworks, examples, and strategies for students, scholars, practitioners, and educators who want to or are already engaged in a variegated range of advocacy work. More so, they reinforce the inherent humanistic values of our field and discuss effective rhetorical and current technological tools at our disposal. Finally, they show us how, through pedagogical approaches and everyday mundane activities and practices, we (can) advocate either actively or passively.

Academy-Industry Relationships and Partnerships Tracy Bridgeford, Kirk St. Amant. 2017-07-05 In the field of technical communication, academics and industry practitioners alike regularly encounter the same question: What exactly is it you do? Their responses often reveal a fundamental difference of perspective on what the field is and how it operates. For example, academics might discuss ideas in terms of rhetorical theory, while practitioners might explain concepts through more practical approaches involving best business practices. And such differences can have important implications for how the field, as a whole, moves forward over time. This collection explores ideas related to forging effective academia-industry relationships and partnerships so members of the field can begin a dialogue designed to foster communication and collaboration among academics and industry practitioners in technical communication. To address the various factors that can affect such interactions, the contributions in this collection represent a broad range of approaches that technical communicators can use to establish effective academy-industry partnerships and relationships in relation to an area of central interest to both: education. The 11 chapters thus present different perspectives on and ideas for

achieving this goal. In so doing, the contributors discuss programmatic concerns, workplace contexts, outreach programs, and research and writing. The result is a text that examines different general contexts in which academia-industry relationships and partnerships can be established and maintained. It also provides readers with a reference for exploring such interactions.

**Technical Communication Today** Richard Johnson-Sheehan. 2017-01-05 For courses in Technical Communication. Fully centralizes the computer in the technical workplace, presenting how writers use computers throughout their communication process. The networked computer, from smartphone to mainframe, has become the central hub of written, spoken, and visual communication in today's scientific and technical workplace. Firmly rooted in core rhetorical principles, *Technical Communication Today* presents computers as thinking tools that powerfully influence how we develop, produce, design, and deliver technical documents and presentations. This popular text helps communicators draft and design documents, prepare material for print and web publication, and make oral presentations. Speaking to today's readers, the narrative is chunked, so that readable portions of text are combined with graphics and can be raided by readers seeking the information they need. Retaining these features, the 6th Edition of *Technical Communication Today* also marks an important shift to drawing readers' attention to the centralization of innovation and entrepreneurship in the technical workplace. Revised chapters, new case studies, and new exercises and projects demonstrate that those who know how to write clearly, speak persuasively, and design functional and attractive texts will be the most likely to succeed in today's innovation-based and entrepreneurial workplace. *Technical Communication Today*, 6th Edition is also available via Revel(tm), an interactive learning environment that enables students to read, practice, and study in one continuous experience. *Reshaping Technical Communication* Barbara Mirel, Rachel Spilka. 2002-06 This anthology brings together voices from industry and academia in a call for elevating the status, identity, value, and influence of technical communicators. Editors Barbara Mirel and Rachel Spilka assert that technical communicators must depart from their traditional roles, moving instead in a more influential and expansive direction. To help readers explore the possibilities, contributions from innovative thinkers and leaders in technical communication propose ways to redefine the field's identity and purposes and to expand the parameters of its work. The chapters included here all point toward new directions for greater growth and influence of the field. Contributors depart from traditional ideas and solutions and discuss new and in some cases radical points, provoking further thought and discussion. Its exploration of fresh territory uncovers new research topics and directions, and provides an examination of both internal, industry-academia relationships and external relationships between technical communicators and other professionals. In its entirety, this collection represents an inclusive vision for the future, targeting such wide-ranging issues as creating effective professional organizations, disseminating research to diverse audiences, transitioning to more influential job roles, exerting leadership in usability, and creating hybrid identities and collaborative programs between industry and academia to support them. The diverse voices from industry and academia will inspire readers to think differently about the discipline's identity and direction, and to build on the ideas they find herein to effect change within their own spheres. As required reading for academics and professionals in technical communication, this collection is a critical step in reshaping and reinvigorating the technical communication field to ensure its survival and growth in the 21st century.

**Solving Problems in Technical Communication** John Dan Johnson-Eilola, Stuart A. Selber. 2012-12-26 The field of technical communication is rapidly expanding in both the academic world and the private sector, yet a problematic divide remains between theory and practice. Here Stuart A.

Selber and Johndan Johnson-Eilola, both respected scholars and teachers of technical communication, effectively bridge that gap. Solving Problems in Technical Communication collects the latest research and theory in the field and applies it to real-world problems faced by practitioners—problems involving ethics, intercultural communication, new media, and other areas that determine the boundaries of the discipline. The book is structured in four parts, offering an overview of the field, situating it historically and culturally, reviewing various theoretical approaches to technical communication, and examining how the field can be advanced by drawing on diverse perspectives. Timely, informed, and practical, Solving Problems in Technical Communication will be an essential tool for undergraduates and graduate students as they begin the transition from classroom to career.
