The Science and Culture of Nutrition, 1840-1940 .2020-01-29 Modern nutrition science is usually considered to have started in the 1840s, a period of great social and political turmoil in western Europe. Yet the relations between the production of scientific knowledge about nutrition and the social and political valuations that have entered into the promotion and application of nutritional research have not yet received systematic historical attention. *The Science and Culture of Nutrition, 1840-1940* for the first time looks at the ways in which scientific theories and investigations of nutrition have made their impact on a range of social practices and ideologies, and how these in turn have shaped the priorities and practices of the science of nutrition. In these reciprocal interactions, nutrition science has affected medical practice, government policy, science funding, and popular thinking. In uniting major scientific and cultural themes, the twelve contributions in this book show how Western society became a nutrition culture.

Man the Hunted Donna Hart.2018-04-17 *Man the Hunted* argues that primates, including the earliest members of the human family, have evolved as the prey of any number of predators, including wild cats and dogs, hyenas, snakes, crocodiles, and even birds. The authors' studies of predators on monkeys and apes are supplemented here with the observations of naturalists in the field and revealing interpretations of the fossil record.

Eyewitness accounts of the 'man the hunted' drama being played out even now give vivid evidence of its prehistoric significance. This provocative view of human evolution suggests that countless adaptations that have allowed our species to survive (from larger brains to speech), stem from a considerably more vulnerable position on the food chain than we might like to imagine. The myth of early humans as fearless hunters dominating the earth obscures our origins as just one of many species that had to be cautious, depend on other group members, communicate danger, and come to terms with being merely one cog in the complex cycle of life.

Meat, Modernity, and the Rise of the Slaughterhouse Paula Young Lee.2008 This title offers an interdisciplinary look at the rise of the slaughterhouse in 19th-century Europe and the Americas. Over the course of this period, the factory slaughterhouse replaced the hand slaughter of animals by individual butchers. A wholly modern invention, the municipal slaughterhouse was a political response to public concerns.

Measuring Up Moramay López-Alonso.2012-09-05 Measuring Up traces the high levels of poverty and inequality that Mexico faced in the mid-twentieth century. Using newly developed multidisciplinary techniques, the book provides a perspective on living standards in Mexico prior to the first measurement of income distribution in 1957. By offering an account of material living conditions and their repercussions on biological standards of living between 1850 and 1950, it sheds new light on the life of the marginalized during this period. Measuring Up shows that new methodologies allow us to examine the history of individuals who were not integrated into the formal economy. Using anthropometric history techniques, the book assesses how a large portion of the population was affected by piecemeal policies and flaws in the process of economic modernization and growth. It contributes to our understanding of the origins of poverty and inequality, and conveys a much-needed, long-term perspective on the living conditions of the Mexican working classes.

Edible Films and Coatings for Food Applications Milda E. Embuscado, Kerry C. Huber.2009-06-10 Edible films and coatings play an important role in the quality, safety, transportation, storage, and display of a wide range of fresh and processed foods. Edible films and coatings, while preventing moisture loss and maintaining quality, prevent spoilage and microbial contamination of foods. The edible film and coating industry is now a multimillion dollar industry. Less than \$1 million in 1999, the market has grown to more than \$100 million and is expected to grow to \$350 million by 2008, according to James Rossman of Rossman Consulting. Pharmaceutical and consumer products have been responsible for the tremendous increase. This growth has produced an enormous amount of scientific articles, patents, and research projects undertaken by members of the food industry, academia, and research institutions. Edible Films and Coatings for Food Applications brings together this vast wealth of scientific knowledge in a systematically organized volume. It examines the science, application, function, and market for edible films and coatings.

The Appetite Awareness Workbook Linda W. Craighead.2006-02-01 People with normal eating patterns eat when they are hungry and stop when they are full. But people struggling with binge eating relate very differently to this most basic need, often risking depression, gastrointestinal problems, and even death because of their problems with food. The Appetite Awareness Workbook offers an eight-week, cognitively based program to help you learn to pay attention to hunger cues, keep track of your feelings about food, and develop an eating schedule that discourages binge eating. In a series of easy exercises, the book guides you toward taking control of eating habits. First, gradual changes help you eat only when hungry or when a mealtime is scheduled. Then, awareness exercises help you stop eating when moderately full. Finally, by using cognitive techniques to control the tendency to eat for emotional reasons and journaling exercises to stay motivated and on track, you'll learn how to retrain yourself to maintain normal and healthy eating habits for life.

Animal and Vegetable Proteins in Lipid Metabolism and Atherosclerosis Michael J. Gibney, David Kritchevsky. 1983 Abstract: Nine papers developed from a 1981 international workshop summarize current knowledge of the role of proteins (and amino acids) in lipid metabolism and atherosclerosis for nutritionists, clinicians, and other health professionals. The topics range from studies on lipid metabolism and experimental atherosclerosis in animals (rats, rabbits, swine), to effects of proteins on human serum lipids and lipoproteins. Other papers discuss the effects of soy protein and casein, influences of dietary protein on serum cholesterol, and the immunological aspects of atherosclerosis. The results of these studies indicate that dietary protein can make a significant contribution to atherosclerosis, that soy protein produces lower serum cholesterol levels than casein (the dynamics of which are described), and that diets containing animal protein are generally more cholesterolemic and atherogenic (in rabbits, specifically) than diets containing vegetable protein. The protein effect can be modified by other dietary components (e.g., fiber, fat). Other findings (e.g., the role of dietary protein in the immunological aspects of atherosclerosis) also are reported. (wz).

Mexico in the 1940s Stephen R. Niblo. 1999 This title examines Mexican politics in the wake of Cardenismo, and the dawn of Miguel Aleman's presidency. This new book focuses on the decade of the 1940s, and analyzes Alcmanismo into the early years of the 1950s. Based upon a decade of intensive investigation, it is the first broad and substantial study of the political life of the Mexican nation during this period, thus opening a new era to historical investigation. Analytical yet lively, mixing political and cultural history, Mexico in the 1940s captures the humor, passion, and significance of Mexico during the World War II and post-war years when Mexicans entered the era called the miracle because of the nation's economic growth and political stability. Niblo develops the case that the Mexico of today -- politically and executively centralized, stressing business and industry, corrupt, ignoring the needs of the majority of the population -- has its roots in the decade and a half after 1940. Finally, Mexico in the 1940s offers a unique interpretation of Mexican domestic politics in this period, including an explanation of how political leaders were able to reverse the course of the Mexican Revolution in the 1940s; an original interpretation of corruption in Mexican political life, a phenomenon that did not end in the 1940s; and an analysis of the relationship between the U.S. media interests, the Mexican state and the Mexican media companies that still dominate mass communication today.

A century later, nearly all were underdeveloped. In the twentieth century, most grew respectably but none managed to catch up. What explains these trends? How important were Latin America's changing relations with the evolving global economy? What hypotheses should be rejected or modified?

Should We Eat Meat? Vaclav Smil. 2013-03-18 Meat eating is often a contentious subject, whether considering the technical, ethical, environmental, political, or health-related aspects of production and consumption. This book is a wide-ranging and interdisciplinary examination and critique of meat consumption by humans, throughout their evolution and around the world. Setting the scene with a chapter on meat's role in human evolution and its growing influence during the development of agricultural practices, the book goes on to examine modern production systems, their efficiencies, outputs, and impacts. The major global trends of meat consumption are described in order to find out what part its consumption plays in changing modern diets in countries around the world. The heart of the book addresses the consequences of the massive carnivory of western diets, looking at the inefficiencies of production and at the huge impacts on land, water, and the atmosphere. Health impacts are also covered, both positive and negative. In conclusion, the author looks forward at his vision of "rational meat eating", where environmental and health impacts are reduced, animals are treated more humanely, and alternative sources of protein make a higher contribution. *Should We Eat Meat?* is not an ideological tract for or against carnivorousness but rather a careful evaluation of meat's roles in human diets and the environmental and health consequences of its production and consumption. It will be of interest to a wide readership including professionals and academics in food and agricultural production, human health and nutrition, environmental science, and regulatory and policy making bodies around the world.

Vegetarianism in the Political Debate Ezequiel Martn Arrieta, Nicols Grobisa. 2014-09-12 An in-depth analysis of the different and significant impacts of the livestock sector on the environment and health, gives us an idea about the great responsibility of animal production in the degradation of land, soil and water, biodiversity reduction, climate change, deforestation and the exponential growth of so-called "modern diseases" resulting from the consumption of animal products. Due to the magnitude of its impacts, livestock is one of the two or three sectors with the most severe impacts on key environmental issues at all levels, from local to global. An approach to this issue requires urgent attention, as mentioned by numerous reports of institutions of world renown. "Vegetarianism in political debate" tries to bring evidence-based information to the general public on the urge for a serious debate with valid arguments about the unsustainability of the current system of production of animal products and the chance to obtain environmental and health benefits arising from the adoption of a vegetarian diet. Inciting skepticism, it is intended that the reader critically ponders over his eating habits which had been imposed on them since childhood. Recognizing these as a cultural pattern that must be modified in order to get a better life quality and a reduced economic and environmental impact caused by meat consumption.
