**Dangerous Games** Margaret MacMillan.2010-07-13 Acclaimed historian Margaret MacMillan explores here the many ways in which history affects us all. She shows how a deeper engagement with history, both as individuals and in the sphere of public debate, can help us understand ourselves and the world better.

But she also warns that history can be misused and lead to misunderstanding. History is used to justify religious movements and political campaigns alike. Dictators may suppress history because it undermines their ideas, agendas, or claims to absolute authority. Nationalists may tell false, one-sided, or misleading stories about the past. Political leaders might mobilize their people by telling lies. It is imperative that we have an understanding of the past and avoid these and other common

traps in thinking to which many fall prey. This brilliantly reasoned work, alive with incident and figures both great and infamous, will compel us to examine history anew—and skillfully illuminates why it is important to treat the past with care.

Focus on Writing Laurie McMillan.2018-10-30 This first-year composition rhetoric-reader uses a Writing about Writing (WAW) approach and a conversational style to help students engage in threshold concepts and transfer what they know about writing to new situations. Each chapter asks a key question such as “Why Write?” or “What Is the Rhetorical Situation and Why Should I Care about It?” Preliminary answers to the chapter question are provided in accessible prose, and these initial ideas are supplemented with a selection of three or four readings and a list of recommended online texts. Prompts for informal and formal writing projects keep the focus on writing and help students apply writing studies scholarship to their own lives in meaningful ways. A companion website includes recommended WAW resources, assignment supports, and links to additional readings: [sites.broadviewpress.com/focusonwriting](https://sites.broadviewpress.com/focusonwriting)

**From Research to Manuscript** Michael J. Katz. 2006-07-10 From Research to Manuscript, written in simple, straightforward language, explains how to understand and summarize a research project. It is a writing guide that goes beyond grammar and bibliographic formats, by demonstrating in detail how to compose the sections of a scientific paper. This book takes you from the data on your desk and leads you through the drafts and rewrites needed to build a thorough, clear science article. At each step, the book describes not only what to do but why and how. It discusses why each section of a science paper requires its

particular form of information, and it shows how to put your data and your arguments into that form. Importantly, this writing manual recognizes that experiments in different disciplines need different presentations, and it is illustrated with examples from well-written papers on a wide variety of scientific subjects. As a textbook or as an individual tutorial, *From Research to Manuscript* belongs in the library of every serious science writer and editor.

**Marina and Lee** Priscilla Johnson McMillan. 2013-08-06 The inside story of Lee Harvey Oswald's path to killing John F. Kennedy. Reissued to mark the 50th anniversary of the Kennedy assassination, *Marina and Lee* is an indispensable account of one of America's most traumatic events, and a classic work of narrative history. In her meticulous, at times even moment by moment, account of Oswald's progress toward the assassination, Priscilla Johnson McMillan takes us inside Oswald's fevered mind and his manic marriage. When Marina, only a few weeks after giving birth to their second child, hears of Kennedy's death and discovers that Lee's rifle is missing from the garage where it was stored, she knows that her husband has killed the President. McMillan came to the story with a unique knowledge of the two main characters. In the 1950s she had worked for Kennedy and had known him well for a time. Later, working in Moscow as a journalist, she interviewed Lee Harvey Oswald during his attempt to defect to the Soviet Union. When she heard his name again on

November 22, 1963, she said, My God! I know that boy! Marina and Lee was written with the complete and exclusive cooperation of Oswald's Russian-born wife, Marina Prusakova, whom McMillan debriefed for seven months in the immediate aftermath of the President's assassination and her husband's nationally televised execution at the hands of Jack Ruby. The truth is far more compelling, and unsettling, than the most imaginative conspiracy theory. Marina and Lee is a human drama that is outrageous, heartbreaking, tragic, fascinating. . . and real. Thick Tressie McMillan Cottom. 2018-01-08 FINALIST FOR THE 2019 NATIONAL BOOK AWARD Named a notable book of 2019 by the New York Times Book Review, Chicago Tribune, Time, and The Guardian As featured by The Daily Show, NPR, PBS, CBC, Time, VIBE, Entertainment Weekly, Well-Read Black Girl, and Chris Hayes, incisive, witty, and provocative essays (Publishers Weekly) by one of the most bracing thinkers on race, gender, and capitalism of our time (Rebecca Traister) "Thick is sure to become a classic." —The New York Times Book Review In eight highly praised treatises on beauty, media, money, and more, Tressie McMillan Cottom—award-winning professor and acclaimed author of Lower Ed—is unapologetically thick: deemed thick where I should have been thin, more where I should have been less, McMillan Cottom refuses to shy away from blending the personal with the political, from bringing her full self and voice to the fore of her analytical work. Thick transforms narrative moments into analyses of whiteness, black misogyny, and status-signaling as means of survival for black women (Los Angeles Review of Books) with writing that is as deft as it is amusing (Darnell L. Moore). This transgressive, provocative, and brilliant (Roxane Gay) collection cements McMillan Cottom's position as a

public thinker capable of shedding new light on what the personal essay can do. She turns her chosen form into a showcase for her critical dexterity, investigating everything from Saturday Night Live, LinkedIn, and BBQ Becky to sexual violence, infant mortality, and Trump rallies. Collected in an indispensable volume that speaks to the everywoman and the erudite alike, these unforgettable essays never fail to be painfully honest and gloriously affirming and hold a mirror to your soul and to that of America (Dorothy Roberts).

**Forest Measurements** Harold E. Burkhart, Thomas Eugene Avery, Bronson P. Bullock. 2018-08-13 Harold Burkhart and Bronson Bullock have updated the quintessential introduction to forest measurements, providing a new generation of forestry students at all levels with the concepts and methods they need for career success. With attention to detail and clear, precise language, the authors present timber measurement techniques applicable to any tree inventory regardless of management objectives. Assuming no more mathematical background than algebra and plane trigonometry, the authors begin with basic statistical concepts to ensure that even introductory students benefit from the book's concise explanations. Comprehensive coverage of sampling designs, land measurements, tree measurements, forest inventory field methods, and growth projections assures utility for foresters throughout their education and beyond. The new edition includes expanded discussions of information technology and geospatial information systems commonly employed in assessing forest resources. Recognizing the needs of contemporary forest inventories and models, a new chapter on assessing forest carbon builds on the foundations of traditional forest measurements, sampling, and modeling. Abundant photographs and illustrations highlight and clarify important concepts, while many numerical examples allow readers to become comfortable with the quantitative tools employed by foresters.

Mother Brain Chelsea Conaboy. 2022-09-13 Health and science journalist Chelsea Conaboy explodes the concept of “maternal instinct” and tells a new story about what it means to become a parent. Conaboy expected things to change with the birth of her child. What she didn’t expect was how different she would feel. But she would soon discover what was behind this: her changing brain. Though Conaboy was prepared for the endless dirty diapers, the sleepless nights, and the joy of holding her newborn, she did not anticipate this shift in self, as deep as it was disorienting. *Mother Brain* is a groundbreaking exploration of the parental brain that untangles insidious myths from complicated realities. New parents undergo major structural and functional brain changes, driven by hormones and the deluge of stimuli a baby provides. These neurobiological changes help all parents—birthing or otherwise—adapt in those intense first days and prepare for a long period of learning how to meet their child’s needs. Pregnancy produces such significant changes in brain anatomy that researchers can easily sort those who have had one from those who haven’t. And all highly involved parents, no matter their path to parenthood, develop similar caregiving circuitry. Yet this emerging science, which provides key insights

into the wide-ranging experience of parenthood, from its larger role in shaping human nature to the intensity of our individual emotions, is mostly absent from the public conversation about parenthood. The story that exists in the science today is far more meaningful than the idea that mothers spring into being by instinct. Weaving the latest neuroscience and social psychology together with new reporting, Conaboy reveals unexpected upsides, generations of scientific neglect, and a powerful new narrative of parenthood.

**Entering Research** Janet L. Branchaw, Amanda R. Butz, Amber Smith.2019-07-10 For students whose experience with science has been primarily in the classroom, it can be difficult to identify and contact potential mentors, and to navigate the transition to a one-on-one, mentor-student relationship. This is especially true for those who are new to research, or who belong to groups that are underrepresented in research. The *Entering Research* curriculum offers a mechanism to structure the independent research experience, and help students overcome these challenges.

*Writing for Science* Robert Goldbort.2006-01-01 This book encompasses the entire range of writing skills that today's experimental scientist may need to employ. Chapters cover routine forms, such as laboratory notes, abstracts, and

memoranda; dissertations; journal articles; and grant proposals. Robert Goldbort discusses how best to approach various writing tasks as well as how to deal with the everyday complexities that may get in the way of ideal practice--difficult collaborators, experiments gone wrong, funding rejections. He underscores the importance of an ethical approach to science and scientific communication and insists on the necessity of full disclosure.

War: How Conflict Shaped Us Margaret MacMillan. 2020-10-06 Is peace an aberration? The New York Times bestselling author of Paris 1919 offers a provocative view of war as an essential component of humanity. NAMED ONE OF THE TEN BEST BOOKS OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW "Margaret MacMillan has produced another seminal work. . . . She is right that we must, more than ever, think about war. And she has shown us how in this brilliant, elegantly written book."—H.R. violence—comes with organized society. War has shaped humanity's history, its social and political institutions, its values and ideas. Our very language, our public spaces, our private memories, and some of our greatest cultural treasures reflect the glory and the misery of war. War is an uncomfortable and challenging subject not least because it brings out both the vilest and the noblest aspects of humanity. Margaret MacMillan looks at the ways in which war has influenced human society and how, in turn, changes in political organization, technology, or ideologies have affected how and why we fight. *War: How Conflict Shaped Us* explores such much-debated and controversial questions as: When did war first start? Does human nature doom us to fight one another? Why has war been described as the most organized of all human activities? Why are warriors almost always men? Is war ever within our control? Drawing on lessons from wars throughout the past, from classical history to the present day, MacMillan reveals the many faces of war—the way it has determined our past, our future, our views of the world, and our very conception of ourselves.

all stages of transforming their scientific data and ideas into a published paper. Many researchers in medicine, including the life sciences and health sciences, struggle to get their research written and published. Manuscripts are typically rejected and/or sent back for revisions several times before ever being published. One reason for this is that researchers have not received much instruction in the specific subjects and skills needed to write and publish scientific medical papers: research methodology, ethics, statistics, data visualization, writing, revising, and the practicalities of publishing. Instead of wasting the reader's time discussing trivialities of punctuation, spelling, etc., this book tackles all the major scientific issues that routinely lead to manuscripts getting rejected from the journals. The section "Preparing" covers the range of methodological, ethical, and practical aspects that researchers need to address before starting to write their paper. The section "Analyzing" reviews commonplace problems in the statistical analysis and presentation, and how to resolve those problems. The section "Drafting" describes what to write in all the various parts of a paper (the Introduction, Methods, Results, Discussion, Abstract, etc.) The section "Revising" explains and illustrates how to improve the writing style of any manuscript. The section "Publishing" discusses how to navigate the peer review process and all other practical aspects of the publishing phase. This book draws on the author's decade of experience as an independent medical writer and research consultant, but it is not written merely as the personal opinion of yet another expert. The entire book is grounded in the existing scientific and scholarly literature, with extensive references and a lengthy annotated bibliography, so readers can quickly obtain more information on any aspect they want. Thus this book provides a more evidence-based, scholarly account of how medical scientific papers should be written, in order to improve medical communication and accelerate scientific progress. After reading this entire book

cover to cover, medical researchers will know how to write better quality medical papers, and they will be able to publish their work in better journals with less time and struggle. This book is essential reading for anyone conducting research in clinical medicine, life sciences, or health sciences.
