Aurélia & Other Writings Gérard de Nerval.1996 Admired by both Proust and Breton, this nineteenth century book was also the favourite of artist Joseph Cornell. An account of the author's passion for an actress and subsequent descent into madness, AURELIA is a document of dreams, obsessions, and insanity. One of the original bohemians, Nerval was well known in his day for parading a lobster on a blue ribbon through the gardens of the Palais-Royal, and for his suicide (1855), hanging from an apron string he called the garter of the Queen of Sheba.

Climate Change, Security Risks, and Conflict Reduction in Africa Charlène Cabot.2015-11-15 The environmental impacts of climate change represent challenges to the societies and are anticipated to contribute to the destabilization of their human security, endangering ways of life of human-beings and inducing conflicts. Vulnerable societies are likely to see a surge in conflicts and violence happen. However social, economic and political circumstances mediating environmental changes are fundamental and determine whether the societal challenge will be a conflictive one. In Western Africa, major environmental changes are expected and the region hosts especially vulnerable population groups (i.e. herders and farmers). Political factors might contribute to determining the occurrence, escalation or reduction of conflict between those groups. The influence of integration policies, of the fairness of land tenure, and of decentralization and participation possibilities on conflicts is studied in Côte d'Ivoire, Ghana and Burkina Faso.

La gestion des talents - 2e éd. Cécile Dejoux,Maurice Thévenet.2015-09-09 La gestion des talents est une thématique qui s'impose depuis quelques années en Gestion des Ressources humaines, en réponse aux limites de l'approche par compétences. Dans un contexte de crise économique, les entreprises cherchent à développer une approche plus individuelle et personnelle en se concentrant sur la recherche de talents, ces personnes aux compétences spécifiques ou rares qui créent davantage de valeur ajoutée. Aussi, est-il essentiel pour les organisations d'identifier les talents dont elles ont besoin aujourd'hui et demain, de mettre en œuvre les meilleures politiques pour les attirer et les valoriser tout en les fidélisant. Cet ouvrage propose un état des lieux des fondements théoriques de la notion de talents, ainsi que des méthodes et outils pour rendre opérationnelle la notion de talent. Cette deuxième édition sera enrichie de deux nouveaux chapitres sur les pratiques innovantes de gestion des talents et sur la gestion des talents à l'ère numérique.

The WEB of Transport Corridors in South Asia Asian Development Bank;JICA;UKAID;World Bank.2018-03-19 The WEB of Transport Corridors in South Asia develops a holistic appraisal methodology to ensure that economic benefits of investments in transport corridors are amplified and more widely spread, and possible negative impacts such as congestion, environmental degradation, and other unintended consequences are minimized. It focuses on South Asia—not only as one of the world's most populous and poorest regions—but as a hinge between East Asia, Central Asia, the Middle East, and Europe. The book is aimed at politicians, technocrats, civil society organizations, and businesses. It presents case studies of past and recent corridor initiatives, provides rigorous analysis of the literature on the spatial impact of corridors, and offers assessments of corridor investment projects supported by international development organizations. A series of spotlights examines such issues as private sector co-investment; the impacts of corridors on small enterprises and women; and issues with implementing cross-border corridors. The 'WEB' in the title stands for both the wider economic benefits (WEB) that transport corridors are expected to generate and the complex web of transport corridors that has been proposed. The appraisal methodology introduced in this book shows how the web of interconnected elements around corridors can be disentangled and the most promising corridor proposals—the ones with the greatest wider economic benefits—can be selected.

Notes on the Synthesis of Form Christopher Alexander.1964 These notes are about the process of design: the process of inventing things which display new physical order, organization, form, in response to function. This book, opening with these words, presents an entirely new theory of the process of design. In the first part of the book, Christopher Alexander discusses the process by which a form is adapted to the context of human needs and demands that has called it into being. He shows that such an adaptive process will be successful only if it proceeds piecemeal instead of all at once. It is for this reason that forms from traditional un-self-conscious cultures, molded not by designers but by the slow pattern of changes within tradition, are so beautifully organized and adapted. When the designer, in our own self-conscious culture, is called on to create a form that is adapted to its context he is unsuccessful, because the preconceived categories out of which he builds his picture of the problem do not correspond to the inherent components of the problem, and therefore lead only to the arbitrariness, willfulness, and lack of understanding which plague the design of modern buildings and modern cities. In the second part, Mr. Alexander presents a method by which the designer may bring his full creative imagination into play, and yet avoid the traps of irrelevant preconception. He shows that, whenever a problem is stated, it is possible to ignore existing concepts and to create new concepts, out of the structure of the problem itself, which do correspond correctly to what he calls the subsystems of the adaptive process. By treating each of these subsystems as a separate subproblem, the designer can translate the new concepts into form. The form, because of the process, will be well-adapted to its context, non-arbitrary, and correct. The mathematics underlying this method, based mainly on set theory, is fully developed in a long appendix. Another appendix demonstrates the application of the method to the design of an Indian village.

Rethinking Military Professionalism for the Changing Armed Forces Krystal K. Hachey,Tamir Libel,Waylon H. Dean.2020-06-09 This book will make a first contribution to identify the gaps in current practices and provide alternative mechanisms to conceptualize professionalism that is reflective of changing requirements, culture, and demographics of the contemporary military force.The military profession promotes the development, sustainment, and embodiment of ethos, which guides conduct across operational contexts, from times of national and international crises and security challenges (e.g., war, natural disasters, and peace support operations). It is imperative for military leaders to understand how ethos and doctrine shape professional frameworks, which guide the conduct of military members.

Wireless Communications, Networking and Applications Qing-An Zeng.2015-10-28 This book is based on a series of conferences on Wireless Communications, Networking and Applications that have been held on December 27-28, 2014 in Shenzhen, China. The meetings themselves were a response to technological developments in the areas of wireless communications, networking and applications and facilitate researchers, engineers and students to share the latest research results and the advanced research methods of the field. The broad variety of disciplines involved in this research and the differences in approaching the basic problems are probably typical of a developing field of interdisciplinary research. However, some main areas of research and development in the emerging areas of wireless communication technology can now be identified. The contributions to this book are mainly selected from the papers of the conference on wireless communications, networking and applications and reflect the main areas of interest: Section 1 - Emerging Topics in Wireless and Mobile Computing and Communications; Section 2 - Internet of Things and Long Term Evolution Engineering; Section 3 - Resource Allocation and Interference Management; Section 4 - Communication Architecture, Algorithms, Modeling and Evaluation; Section 5 - Security, Privacy, and Trust; and Section 6 - Routing, Position Management and Network Topologies.

How Nature Works Per Bak.2013-11-11 Self-organized criticality, the spontaneous development of systems to a critical state, is the first general theory of complex systems with a firm mathematical basis. This theory describes how many seemingly desperate aspects of the world, from stock market crashes to mass extinctions, avalanches to solar flares, all share a set of simple, easily described properties. ...a'must read'...Bak writes with such ease and lucidity, and his ideas are so intriguing...essential reading for those interested in complex systems...it will reward a sufficiently skeptical reader. -NATURE ...presents the theory (self-organized criticality) in a form easily absorbed by the non-mathematically inclined reader. -BOSTON BOOK REVIEW I picture Bak as a kind of scientific musketeer; flamboyant, touchy, full of swagger and ready to join every fray... His book is written with panache. The style is brisk, the content stimulating. I recommend it as a bracing experience. -NEW SCIENTIST

The third part opens with a broad review of technology and intellectual trends, circa 1970, and continues with three case studies of approaches in mathematics education and the place of tools in these approaches. The fourth part considers issues related to mathematics instructions: curriculum, assessment and policy; the calculator debate; mathematics in the real world; and teachers' use of technology.
