**Procedures for Port State Control 2011** International Maritime Organization.2012 Port state control (PSC) involves the inspection of foreign ships in national port areas to verify that the condition and operation of a ship and its equipment comply with the requirements of international regulations. While IMO has always acknowledged that enforcement of global maritime standards is the responsibility of flag states, the organisation nevertheless recognises that exercising the right to carry out Psc makes an important contribution to ensuring those standards are implemented consistently on ships of different nationalities. The sub-committee on flag state implementation has developed and maintained a framework to promote the global harmonisation and co-ordination of Psc activities resulting in the adoption of resolution A.1052(27) by the assembly of November 2011. This resolution contains the Procedures for port state control, 2011, and revokes resolutions A.787(19) and A.882(21).

Sistema mundial de socorro y seguridad marítima Zebensuí Palomo Cano.2016-02-19 A día de hoy las comunicaciones en el mundo del mar pueden marcar la seguridad de un buque, sus tripulantes y la valiosa carga que éste porte. Aún así las comunicaciones en general, protocolos, sistemas, servicios, actuaciones e incluso hasta responsabilidades, derechos y obligaciones siguen siendo un tabú y pocos profesionales saben hacer un uso correcto de los mismos. Con las vistas puestas en facilitar y definir las funciones y tareas de los Oficiales Radioelectrónicos o antiguos Radiotelegrafistas de forma concreta, común y factible hacia las tripulaciones de navegación en los buques, se desarrolla el presente manual sobre el Sistema Mundial de Socorro y Seguridad Marítima (SMSSM).

**Global Mobile Satellite Communications** Stojce Dimov Ilcev.2005-12-05 Global mobile satellite communications (GMSC) are specific satellite communication systems for maritime, land and aeronautical applications. It enables connections between moving objects such as ships, vehicles and aircrafts, and telecommunications subscribers through the medium of communications satellites, ground earth stations, PTT or other landline telecommunications providers. Mobile satellite communications and technology have been in use for over two decades. Its initial application is aimed

at the maritime market for commercial and distress applications. In recent years, new developments and initiatives have resulted in land and aeronautical applications and the introduction of new satellite constellations in non-geostationary orbits such as Little and Big LEO configurations and hybrid satellite constellations as Ellipso Borealis and Concordia system. This book is important for modern shipping, truck, train and aeronautical societies because GMSC in the present millennium provides more effective business and trade, with emphasis on safety and commercial communications. Global Mobile Satellite Communications is written to make bridges between potential readers and current GMSC trends, mobile system concepts and network architecture using a simple mode of style with understandable technical information, characteristics, graphics, illustrations and mathematics equations. Global Mobile Satellite Communications represents telecommunications technique and technology, which can be useful for all technical staff on vessels at sea and rivers, on all types of land vehicles, on planes, on off shore constructions and for everyone possessing satellite communications handset phones.
