of one of the most famous, contested, and important books of all time. Since the moment it was released on November 24, 1859, Darwin's masterwork has been heralded for changing the course of science and condemned for its implied challenges to religion. In *Charles Darwin's On the Origin of Species*, author Michael Keller and illustrator Nicolle Rager Fuller introduce a new generation of readers to the original text. Including sections about his pioneering research, the book's initial public reception, his correspondence with other leading scientists, as well as the most recent breakthroughs in evolutionary theory, this riveting, beautifully rendered adaptation breathes new life into Darwin's seminal and still polarizing work.

Chimpanzee Kevin D. Hunt.2020-08-20 The chimpanzee is one of our planet's best-loved and most instantly recognisable animals. Splitting from the human lineage between four and six million years ago, it is (along with its cousin, the bonobo) our closest living relative, sharing around 94% of our DNA. First encountered by Westerners in the seventeenth century, virtually nothing was known about chimpanzees in their natural environment until 1960, when Jane Goodall travelled to Gombe to live and work with them. Accessibly written, yet fully referenced and uncompromising in its accuracy and comprehensiveness, this book encapsulates everything we currently know about chimpanzees: from their discovery and why we study them, to their anatomy, physiology, genetics and culture. The text is beautifully illustrated and infused with examples and anecdotes drawn from the author's thirty years of primate observation, making this a perfect resource for students of biological anthropology and primatology as well as non-specialists interested in chimpanzees.

Visionary Women Andrea Barnet.2018-03-13 Winner of The Green Prize for Sustainable Literature A Finalist for the PEN/Bograd Weld Prize for Biography Four influential women we thought we knew well—Jane Jacobs, Rachel Carson, Jane Goodall, and Alice Waters—and how they spearheaded the modern progressive movement This is the story of four visionaries who profoundly shaped the world we live in today. Together, these women—linked not by friendship or field, but by their choice to break with convention—showed what one person speaking truth to power can do. Jane Jacobs fought for livable cities and strong communities; Rachel Carson warned us about poisoning the environment; Jane Goodall demonstrated the indelible kinship between humans and animals; and Alice Waters urged us to reconsider what and how we eat. With a keen eye for historical detail, Andrea Barnet traces the arc of each woman’s career and explores how their work collectively changed the course of history. While they hailed from different generations, Carson, Jacobs, Goodall, and Waters found their voices in the early sixties. At a time of enormous upheaval, all four stood as bulwarks against 1950s corporate culture and its war on nature. Consummate outsiders, each prevailed against powerful and mostly male adversaries while also anticipating the disaffections of the emerging counterculture. All told, their efforts ignited a transformative progressive movement while offering people a new way to think about the world and a more positive way of living in it.

An exhilarating account of Sapolsky's twenty-one-year study of a troop of rambunctious baboons in Kenya, *A Primate's Memoir* interweaves serious scientific observations with wry commentary about the challenges and pleasures of living in the wilds of the Serengeti—for man and beast alike. Over two decades, Sapolsky survives culinary atrocities, gunpoint encounters, and a surreal kidnapping, while witnessing the encroachment of the tourist mentality on Africa. As he conducts unprecedented physiological research on wild primates, he becomes enamored of his subjects—unique and compelling characters in their own right—and he returns to them summer after summer, until tragedy finally prevents him. By turns hilarious and poignant, *A Primate's Memoir* is a magnum opus from one of our foremost science writers.
