Trade, Migration and Law Victor T. Amadi.2022-03-24 This book explores how law and policy makers within the Southern African Development Community regional structure might reform the legal and regulatory frameworks to best capitalise the benefits of the movement of people, drawing lessons from other experienced jurisdictions by critically engaging with the regulatory efforts and approaches in regions such as the European Union, the Economic Community of West African States, and the East African Community to propose a revised approach to migration governance and practice in the SADC. Deeper regional integration allows citizens to move freely across national boundaries, and services are a rising component of global trade and investment. However, global trade in services is stifled by barriers at and behind the border. These barriers make it difficult for service providers from developing regions to access key markets in their preferred modes of service trade. Against this background, this book aims to take the discussion on furthering regional integration and trade through the movement of people by tackling issues on stringent immigration policies, arguing that having a vibrant and rewarding trade in services will require an approach towards the unrestricted movement of persons.

Successful Case-based Reasoning Applications Stefania Montani.2010-08-11 Case-based reasoning (CBR) is an Artificial Intelligence (AI) technique to support the capability of reasoning and learning in advanced decision support systems. CBR exploits the specific knowledge collected on previously encountered and solved situations, which are known as cases. In this book, we have collected a selection of papers on very recent CBR applications. These, after an in-depth analysis of their specific application domain needs, propose proper methodological solutions and give encouraging evaluation results, which have in some cases led to the commercialization step. The collected contributions demonstrate the capability of CBR to solve or handle issues which would be too difficult to manage with other classical AI methods and techniques, such as rules or models. The heterogeneity of the involved application domains indicates the flexibility of CBR, and its applicability in all those fields where experiential knowledge is (readily) available.
