Toward a New Poetics Serge Gavronsky.1994-12-01 A quiet revolution is taking place in avant-garde French poetry and prose. In this collection of twelve interviews with some of France's most important poets and writers, Serge Gavronsky introduces American readers to these exciting new developments. As Gavronsky explains, a neolyricism is now replacing the formalism of the 1960s, '70s, and '80s. In his substantial introduction, Gavronsky notes how the ideological definition of writing (écriture) has given way to more open forms of writing. Human experiences of the most ordinary kinds are finding a place in the text. These interviews offer a view of the poets' and writers' creative processes and range over such topics as current literary theory, the impact of American poetry in France, and the place of feminism in contemporary French writing. Each interview is accompanied by samples of the writer's work in French and in Gavronsky's English translations. *Toward a New Poetics* provides a highly informative cultural and critical perspective on contemporary writing in France, introducing us to works which are now transforming the idea of literature itself.

Surveys on Surgery Theory (AM-145), Volume 1 Sylvain Cappell,Andrew Ranicki,Jonathan Rosenberg.2014-09-08 Surgery theory, the basis for the classification theory of manifolds, is now about forty years old. There have been some extraordinary accomplishments in that time, which have led to enormously varied interactions with algebra, analysis, and geometry. Workers in many of

these areas have often lamented the lack of a single source that surveys surgery theory and its applications. Indeed, no one person could write such a survey. The sixtieth birthday of C. T. C. Wall, one of the leaders of the founding generation of surgery theory, provided an opportunity to rectify the situation and produce a comprehensive book on the subject. Experts have written state-of-the-art reports that will be of broad interest to all those interested in topology, not only graduate students and mathematicians, but mathematical physicists as well. Contributors include J. Milnor, S. Novikov, W. Browder, T. Lance, E. Brown, M. Kreck, J. Klein, M. Davis, J. Davis, I. Hambleton, L. Taylor, C. Stark, E. Pedersen, W. Mio, J. Levine, K. Orr, J. Buyology Martin Lindstrom.2010-02-02 NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today’s message-cluttered world? In *Buyology*, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? *Buyology* is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

Architects' Data Ernst Neufert,Peter Neufert.1991-01-15 This is an essential aid in the initial design and planning of a project. The relevant building type is located by a comprehensive index and cross reference system, a condensed commentary covers user requirements, planning criteria, basic dimensions and other considerations of function, siting aspect etc. A system of references based on an extensive bibliography supports the text. In every section plans, sections, site layouts, design details and graphs illustrated key aspects of a building type's design. Most illustrations are dimensioned or scaled - the metric system of measurement is used throughout, and the equivalent in feet/inches can easily be read either off a graphic scale on the page or from the built-in conversion

table. The illustrations are international in origin and include both well know and less famous designers. Architects Data is primarily a handbook of building types rather than of construction techniques and details. However its treatment of components (such as doors and windows) and of spaces for building services is extremely thorough, since consideration of this data is an essential element of the planning process. The opening pages of basic data on man and his buildings cover critical subjects such as scale, drawing practice, noise, light and space for the same reason. Particular attention has also been paid to the implications of energy conservation, means of escape from fire and the needs of the elderly and the disabled.

Connections in Steel Structures R. Bjorhovde, J. Brozzetti, A. Colson. 1988-02-19 This book is the Proceedings of a State-of-the-Art Workshop on Connections and the Behaviour, Strength and Design of Steel Structures held at Laboratoire de Mecanique et Technologie, Ecole Normale, Cachan France from 25th to 27th May 1987. It contains the papers presented at the above proceedings and is split into eight main sections covering: Local Analysis of Joints, Mathematical Models, Classification, Frame Analysis, Frame Stability and Simplified Methods, Design Requirements, Data Base Organisation, Research and Development Needs. With papers from 50 international contributors this text will provide essential reading for all those involved with steel structures.

Probabilistic Databases Dan Suci, Dan Olteanu, Christoph Koch. 2011 Probabilistic databases are databases where the value of some attributes or the presence of some records are uncertain and known only with some probability. Applications in many areas such as information extraction, RFID and scientific data management, data cleaning, data integration, and financial risk assessment produce large volumes of uncertain data, which are best modeled and processed by a probabilistic database. This book presents the state of the art in representation formalisms and query processing

techniques for probabilistic data. It starts by discussing the basic principles for representing large probabilistic databases, by decomposing them into tuple-independent tables, block-independent-disjoint tables, or U-databases. Then it discusses two classes of techniques for query evaluation on probabilistic databases. In extensional query evaluation, the entire probabilistic inference can be pushed into the database engine and, therefore, processed as effectively as the evaluation of standard SQL queries. The relational queries that can be evaluated this way are called safe queries. In intensional query evaluation, the probabilistic inference is performed over a propositional formula called lineage expression: every relational query can be evaluated this way, but the data complexity dramatically depends on the query being evaluated, and can be #P-hard. The book also discusses some advanced topics in probabilistic data management such as top-k query processing, sequential probabilistic databases, indexing and materialized views, and Monte Carlo databases. Table of Contents: Overview / Data and Query Model / The Query Evaluation Problem / Extensional Query Evaluation / Intensional Query Evaluation / Advanced Techniques

Des Pawson's Knot Craft Des Pawson.2013-06-20 This treasure trove of Des Pawson's personal ropecraft recipes contains projects ranging from bellropes, key fobs and fenders to mats, doorstops, knife lanyards and belts. The second edition has been expanded to include more of Des's enticing ropework projects. Along with fascinating tidbits of nautical history as background to the many projects, and guidance as to how they can be the starting point for many other items, Des gives step-by-step instructions on how to put these knots together to form the finished article, and provides advice on the size and lengths of the materials required - just as you would expect from a recipe book. With this book to hand, readers will have the confidence to start making desirable objects with knots because, as Des says, this is the book that makes all other knot books work! 'You'll certainly

Greek Gods Abroad Robert Parker.2017-05-23 From even before the time of Alexander the Great, the Greek gods spread throughout the Mediterranean, carried by settlers and largely adopted by the indigenous populations. By the third century b.c., gods bearing Greek names were worshipped everywhere from Spain to Afghanistan, with the resulting religious systems a variable blend of Greek and indigenous elements. *Greek Gods Abroad* examines the interaction between Greek religion and the cultures of the eastern Mediterranean with which it came into contact. Robert Parker shows how Greek conventions for naming gods were extended and adapted and provides bold new insights into religious and psychological values across the Mediterranean. The result is a rich portrait of ancient polytheism as it was practiced over 600 years of history.

A History of Optics from Greek Antiquity to the Nineteenth Century Olivier

Darrigol.2012-01-26 This book is a long-term history of optics, from early Greek theories of vision to the nineteenth-century victory of the wave theory of light. It shows how light gradually became the central entity of a domain of physics that no longer referred to the functioning of the eye; it retraces the subsequent competition between medium-based and corpuscular concepts of light; and it details the nineteenth-century flourishing of mechanical ether theories. The author critically exploits and sometimes completes the more specialized histories that have flourished in the past few years. The resulting synthesis brings out the actors' long-term memory, their dependence on broad cultural shifts, and the evolution of disciplinary divisions and connections. Conceptual precision, textual concision, and abundant illustration make the book accessible to a broad variety of readers interested in the origins of modern optics.

What the Buddha Taught Walpola Rahula.2007-12-01 “A terrific introduction to the Buddha’s teachings.” —Paul Blairon, California Literary Review This indispensable volume is a lucid and faithful account of the Buddha’s teachings. “For years,” says the Journal of the Buddhist Society, “the newcomer to Buddhism has lacked a simple and reliable introduction to the complexities of the subject. Dr. Rahula’s What the Buddha Taught fills the need as only could be done by one having a firm grasp of the vast material to be sifted. It is a model of what a book should be that is addressed first of all to ‘the educated and intelligent reader.’ Authoritative and clear, logical and sober, this study is as comprehensive as it is masterly.” This edition contains a selection of illustrative texts from the Suttas and the Dhammapada (specially translated by the author), sixteen illustrations, and a bibliography, glossary, and index. “[Rahula’s] succinct, clear overview of Buddhist concepts has

never been surpassed. It is the standard.” —Library Journal

Solomon.2006-03-20 Column Generation is an insightful overview of the state of the art in integer programming column generation and its many applications. The volume begins with A Primer in Column Generation which outlines the theory and ideas necessary to solve large-scale practical problems, illustrated with a variety of examples. Other chapters follow this introduction on Shortest Path Problems with Resource Constraints, Vehicle Routing Problem with Time Window, Branch-and-Price Heuristics, Cutting Stock Problems, each dealing with methodological aspects of the field. Three chapters deal with transportation applications: Large-scale Models in the Airline Industry, Robust Inventory Ship Routing by Column Generation, and Ship Scheduling with Recurring Visits and Visit Separation Requirements. Production is the focus of another three chapters: Combining Column Generation and Lagrangian Relaxation, Dantzig-Wolfe Decomposition for Job Shop Scheduling, and Applying Column

Generation to Machine Scheduling. The final chapter by François Vanderbeck, Implementing Mixed Integer Column Generation, reviews how to set-up the Dantzig-Wolfe reformulation, adapt standard MIP techniques to the column generation context (branching, preprocessing, primal heuristics), and deal with specific column generation issues (initialization, stabilization, column management strategies).
