Owls Heimo Mikkola.2020-01-15 Owls are soft-plumaged, short-tailed, big-headed birds that have the most frontally situated eyes of all birds and they can blink the upper eyelids. This, together with a broad facial disc, gives owls all the right characteristics to make them attractive in our eyes. At the same time, some people fear their presence and even their calls, and there are more myths and beliefs about owls than there are about any other bird. Bats are often similarly feared as owls, partly because both of them inhabit the night; a place that is unknown and alien to us. Owls and bats symbolise all that is mysterious about the night and their complete mastery of the darkness only highlights our own deficiencies. In this book, we will get to know the relationships between bats and owls. This book describes the biological control of rats by owls in Malaysia, the prey-predator interactions in a tropical forest in Mexico, and provides an overview of the breeding biology of owls. From numerous owl belief and myth studies, described in this book are those of the lesser known Central Asian countries where owls are often worshipped for their supernatural powers.

Current Topics in Early Childhood Education, Volume 5

Lilian G. Katz.1984-01-01 The chapters in this volume are divided into three sections. In the first section, the authors provide a framework for the reader by setting ethnography in context. Chapters cover definitions of ethnography, its basic underlying principles, and propose ways in which it can be useful to education. The second section presents a range of ethnographic studies. The research presented defines by illustration some essential characteristics of ethnography. Chapters in the third

section reflect on the different themes, issues, and concerns of the field of ethnography and education in general, and of the articles in the volume in particular. The central themes are continuity vs. discontinuity in children's lives; the role of folklore in education; researcher/ educator collaboration; and micro vs. macro levels of analysis. Dynamics of Human Reproduction James W. Wood. 2017-09-29
Awarded the W. W. Howells Award for the Outstanding Book in Biological Anthropology, this volume presents a comprehensive, integrated, and up-to-date overview of the major physiological and behavioral factors affecting human reproduction. In attempting to identify the most important causes of variation in fertility within and among human populations, Wood summarizes data from a wide range of societies. Trained as an anthropologist as well as a demographer, he devotes special attention to so-called natural fertility populations, in which modern contraceptives and induced abortion are not used to limit reproductive output. Such an emphasis enables him to study the interaction of biology and behavior with particular clarity. The volume weaves together the physiological, demographic, and biometric approaches to human fertility in a way that will encourage future interdisciplinary research. Instead of offering a general overview, the focus is to answer one question: Why does fertility and the number of live births vary from couple to couple within any particular population, and from population to population across the human species as a whole? Topics covered include ovarian function, conception and pregnancy, intrauterine mortality, reproductive maturation and senescence, coital frequency and the waiting time to conception, marriage patterns and the initiation of reproduction, the fertility-reducing effects of breastfeeding, the impact of maternal nutrition on reproduction, and reproductive seasonality. This unique combination of comprehensive subject matter and an integrated analytical

approach makes the book ideally suited both as a graduate-level textbook and as a reference work.

Biennial Review of Infertility Peter N. Schlegel, Bart C. Fauser, Douglas T. Carrell, Catherine Racowsky. 2013-06-04 In this third volume, the Biennial Review of Infertility brings together the most up-to-date research and clinical information on male and female infertility, emerging assisted reproductive techniques, and controversial issues in reproductive medicine. An impressive panel of contributors presents cutting-edge information in a clear and well-balanced manner. This volume includes hot topics in reproductive medicine including age and its impact on fertility, lifestyle factors and reproductive health, fertility preservation for cancer patients, reproductive tourism and a discussion of clinical research design. The expanded section on controversies allows for point/counterpoint discussion between experts with differing opinions on topics like safety of the ICSI procedure and the role of IUI in modern reproductive medicine. Created to provide an ongoing appraisal of current knowledge, the Biennial Review of Infertility stimulates communication amongst all those working to help couples resolve their infertility.

Regulating Assisted Reproductive Technologies Amel Alghrani. 2018-11-22 Examines emerging assisted reproductive technologies that will revolutionise the future of human reproduction and their regulation.

Disorders of Puberty Sandro La Vignera, Aldo E Calogero. 2020-09-10 How often is male idiopathic infertility diagnosed nowadays? It is estimated that 70% of male infertility is apparently idiopathic because its etiology cannot be found despite a complete diagnostic procedure. Epidemiological studies have highlighted that sperm concentration and total count have halved in the past forty years. The reasons for this decline are still unknown and, therefore, it is urgently necessary to research the etiopathogenetic moments. Given that Sertoli cells are responsible for supporting spermatogenesis, much attention

should be focused on their function. During childhood, these cells have peculiar characteristics. After the onset of puberty, they reach a state of maturity and lose their ability to proliferate. Therefore, several environmental or lifestyle factors in childhood could reasonably interfere with the proliferation of Sertoli cells and this may be the cause of so-called idiopathic infertility in adulthood. For that reason, this book explores molecular aspects involving prepubertal Sertoli cells, risk factors for infertility in the early stages of life, and the correct management of andrological health from the first months of life and during infancy and adolescence. A close collaboration between pediatricians, endocrinologists, and andrologists is of fundamental importance to achieve an important goal: To protect the health of the fathers of tomorrow!

Reproductive Disruptions Marcia C. Inhorn, Marcia Claire Inhorn. 2007 Based on research by leading medical anthropologists from around the world, this book examines such issues as local practices detrimental to safe pregnancy and birth; conflicting reproductive goals between women and men; and miscommunications between pregnant women and their genetic counselors.

Biennial Review of Infertility Douglas T. Carrell, Peter N. Schlegel, Catherine Racowsky, Luca Gianaroli. 2016-10-15 Now in its fourth volume, the Biennial Review of Infertility brings together the most up-to-date research and clinical information on male and female infertility, emerging assisted reproductive techniques and evolving controversies in reproductive medicine. An impressive panel of contributors presents cutting-edge information in a clear and well-balanced manner. Volume 4 discusses hot topics in contemporary reproductive medicine, including stem cell technologies for male infertility, the current state of ovarian tissue cryopreservation and time-lapse video microscopy of embryos. The expanded section on controversies allows for point/counterpoint discussion between experts with

differing opinions on topics like eSET and the use and role of dietary supplements in IVF cycles. Created to provide an ongoing appraisal of current knowledge, the Biennial Review of Infertility stimulates communication amongst all clinicians and researchers working to help couples resolve their infertility.

Boar Reproduction Sergi Bonet, Isabel Casas, William V Holt, Marc Yeste. 2013-02-01 Latent knowledge in the field of pig reproduction is vast but scattered, making it difficult to take in all information at a glance. Moreover, nascent branches in biotechnology cannot grow if deprived of roots. The book *Boar Reproduction: Fundamentals and New Biotechnological Trends* links the past, the present and the emerging scientific research fields on reproductive biotechnology, offering a rigorous but easy to follow compilation of topics, from “old favorites” to the latest advances. The book is organized in three parts. The chapters of the first and second part cover various biological aspects of boar spermatozoa within the male, and within the female environments, respectively. The most common laboratory and artificial insemination techniques are discussed in the third part. As an additional feature, some chapters focus on the basis of a technology transfer to bring research expertise from basic science to the market, making the information provided in this book suitable for academic, research and other professional applications.

How We Do It Robert Martin. 2013-06-11 A primatologist explores the mystery of the origins of human reproduction, explaining that understanding the evolutionary past can provide insight into what worked, what didn't, and what it all means for the future of mankind.

Critical Issues in Reproductive Health Andrzej Kulczycki. 2013-08-23 In this book, leading academics and practitioners in the field of reproductive health address topics such as contraception, abortion, sexually transmitted infections, maternal and prenatal health, sexuality and reproductive rights

by examining a number of critical issues in these areas. The authors describe new research, identify gaps and priorities in policy and practice, and illustrate innovative solutions. The book further addresses such current imperatives as understanding the social meanings of emergency contraception, measuring gender-based violence, improving reproductive health governance, strengthening health systems and services, and redressing institutional barriers. The book also assesses how reproductive health programs can be reconfigured to new challenges such as those posed by climate change, vulnerable youth in fragile states, and risks from new infertility treatments. Using a rich and varied set of cases, a broad public health and social science perspective, and novel methodological approaches, this book questions common assumptions, illustrates effective solutions and sets out research, policy, and programmatic agendas for the present and future. This is a comprehensive volume which provides a valuable resource to researchers, educators, practitioners, policymakers and students, as well as anyone studying or advocating for reproductive health.

Hormones and Reproduction of Vertebrates, Volume 5 David

Norris, Kristin Lopez. 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals. It is designed to provide a readable, coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events. Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group, respectively, the volumes are prepared so as to provide a thorough topical treatment across the vertebrates.

Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature, and a comprehensive glossary of these terms and their alternative names is provided. A complete, essential and up to date reference for research scientists working on vertebrate hormones and reproduction - and on animals as models in human reproductive research Covers the endocrinology, neuroendocrinology, physiology, behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects, similarities and differences between them

The End of Sex and the Future of Human Reproduction Henry T.

Greely. 2016-05-30 Within twenty, maybe forty, years most people in developed countries will stop having sex for the purpose of reproduction. Instead, prospective parents will be told as much as they wish to know about the genetic makeup of dozens of embryos, and they will pick one or two for implantation, gestation, and birth. And it will be safe, lawful, and free. In this work of prophetic scholarship, Henry T. Greely explains the revolutionary biological technologies that make this future a

Reproductive Ethics Lisa Campo-Engelstein, Paul

Burcher. 2017-06-10 This book summarizes the contributions at an April 2016 conference held at Albany Medical College, *Reproductive Ethics: New Challenges and Conversations*. Reproductive ethics does not suffer from a lack of challenging issues, yet a few hot button issues such as abortion and surrogacy seem to attract most of the attention, while other issues and dilemmas remain relatively underdeveloped in bioethics literature. The goal of this book is to explore and expand the range of topics addressed in reproductive ethics. This is a multi-disciplinary book bringing together philosophers, clinicians, sociologists, anthropologists, and other scholars whose research or clinical interests touch reproductive issues. The results of this compilation are a comprehensive and unique discussion of the evolving issues in the rapidly changing field. The majority of the popular reproductive ethics anthologies were published at least 10 years ago. The field of reproductive ethics would benefit from a new anthology that addresses some of the perennial dilemmas in reproductive ethics (e.g. abortion, sex selection) from updated perspectives and that also covers new technologies that have

Conceiving the New World Order Faye D. Ginsburg, Rayna Rapp. 1995-07-31 This volume provides an investigation of the dynamics of reproduction. Using reproduction as an entry point the authors examine how cultures are produced, contested, and transformed as people imagine their collective future in the creation of the next generation.

Assisted Reproductive Technology Charles P. Kindregan, Maureen McBrien. 2006 As more people turn to assisted reproduction, the legal issues surrounding it have become increasingly complex. Beyond representing patients or clinics, numerous legal problems are arising from the technology's application. Disputes in divorce are the most common, but this technology impacts the law in other areas, including personal injury, insurance, criminal law, and estate planning. Drawing from multiple legal sources, this

book presents complex information in a direct, balanced and fair manner. It includes glossary, sample forms and checklists, and bibliography.

Conceiving the Future Laura L. Lovett.2009-11-30 Through nostalgic idealizations of motherhood, family, and the home, influential leaders in early twentieth-century America constructed and legitimated a range of reforms that promoted human reproduction. Their pronatalism emerged from a modernist conviction that reproduction and population could be regulated. European countries sought to regulate or encourage reproduction through legislation; America, by contrast, fostered ideological and cultural ideas of pronatalism through what Laura Lovett calls nostalgic modernism, which romanticized agrarianism and promoted scientific racism and eugenics. Lovett looks closely at the ideologies of five influential American figures: Mary Lease's maternalist agenda, Florence Sherbon's eugenic fitter families campaign, George Maxwell's homecroft movement of land reclamation and home building, Theodore Roosevelt's campaign for conservation and country life, and Edward Ross's sociological theory of race suicide and social control. Demonstrating the historical circumstances that linked agrarianism, racism, and pronatalism, Lovett shows how reproductive conformity was manufactured, how it was promoted, and why it was coercive. In addition to contributing to scholarship in American history, gender studies, rural studies, and environmental history, Lovett's study sheds light on the rhetoric of family values that has regained currency in recent years.

Disease Control Priorities, Third Edition (Volume 2) Robert Black,Ramanan Laxminarayan,Marleen Temmerman,Neff Walker.2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

The Ethics of New Reproductive Technologies Dolores Dooley, Panagiota Dalla-Vorgia, Tina Garanis-Papadatos, Joan McCarthy. 2003-05-01 The new reproductive technologies (NRTs) have given rise to new ethical questions that are widely debated. This book, the outcome of a European Union-wide collaborative process, draws on the experience and expertise of ethicists, lawyers, and clinical practitioners and focuses on some of the burning issues in different European countries. These include: donor insemination; surrogacy; preimplantation genetic diagnosis; embryo research; access to IVF treatment; and parental, professional and social responsibility. Familiar notions such as quality of life, parenthood, mothering, responsibility and personal identity surface at many points throughout the book and are refashioned to accommodate new questions. This book introduces and probes ethical questions and challenges in a hands-on way by working through relevant case studies with key commentaries and activities. It engages the reader directly in ethical reasoning and decision-making and provides clear explanations, insightful commentaries and informed debate on NRTs.

Human Reproduction L. M. Baggott. 1997-02-20 Concise, introductory textbook examining human reproduction for advanced school and beginning university students.

Reproduction Nick Hopwood, Rebecca Flemming, Lauren Kassell. 2018-12-06 From contraception to cloning and pregnancy to populations, reproduction presents urgent challenges today. This field-defining history synthesizes a vast amount of scholarship to take the long view. Spanning from antiquity to the present day, the book focuses on the Mediterranean, western

Europe, North America and their empires. It combines history of science, technology and medicine with social, cultural and demographic accounts. Ranging from the most intimate experiences to planetary policy, it tells new stories and revises received ideas. An international team of scholars asks how modern 'reproduction' - an abstract process of perpetuating living organisms - replaced the old 'generation' - the active making of humans and beasts, plants and even minerals. Striking illustrations invite readers to explore artefacts, from an ancient Egyptian fertility figurine to the announcement of the first test-tube baby. Authoritative and accessible, *Reproduction* offers students and non-specialists an essential starting point and sets fresh agendas for research.

Infertility Around the Globe Marcia Claire Inhorn, Frank van Balen. 2002-05-30 These essays examine the global impact of infertility as a major reproductive health issue, one that has profoundly affected the lives of countless women and men. The contributors address a range of topics including how the deeply gendered nature of infertility sets the blame on women's shoulders.

Infections, Infertility, and Assisted Reproduction Kay Elder, Doris J. Baker, Julie A. Ribes. 2004-12-09 ART treatment is vulnerable to the hazard of potential infection from many different sources: patients, samples, staff and the environment. Culture of gametes and embryos in vitro provides multiple targets for transmission of potential infection, including the developing embryo, neighbouring gametes and embryos, the couple undergoing treatment and other couples being treated during the same period. This unique situation, with multifaceted opportunities for microbial growth and transmission, makes infection and contamination control absolutely crucial in the practice of assisted reproduction, and in the laboratory in particular. Originally published in 2004, this practical book provides a basic overview of microbiology in the context of ART, providing a guide

to infections in reproductive medicine. The relevant facets of the complex and vast field of microbiology are condensed and focused, highlighting information that is crucial for safe practice in both clinical and laboratory aspects of ART.

Stress and Resilience Leith Mullings, Alaka Wali. 2012-12-06

Documenting the daily efforts of African Americans to protect their community against highly oppressive conditions, this ground-breaking volume chronicles the unique experiences of black women that place them at higher risk for morbidity and mortality - especially during pregnancy. *Stress and Resilience: The Social Context of Reproduction in Central Harlem* examines the processes through which economic circumstances, environmental issues, and social conditions create situations that expose African American women to stress and chronic strain. Detailing the individual and community assets and strategies used to address these conditions, this volume provides a model methodology for translating research into public health and social action. Based on interactive community partnered research, *Stress and Resilience: The Social Context of Reproduction in Central Harlem* Facilitates more exact hypotheses about the relationship between risk factors, protective factors and reproductive health; Furnishes a better understanding of chronic disease patterns and suggests more effective interventions to reduce rates of infant mortality; Incorporates the voices of the community and of women themselves through their own words and actions; Sheds light on epidemiologic research and intervention protocols; Examines the social context in which reproductive behaviors are practiced; Provides a holistic framework in which to understand infant mortality; And more. Filling a large gap in the literature on the social context of reproduction this important monograph offers indispensable information for public health researchers, program planners, anthropologists, sociologists, urban planners, medical providers, policy makers, and private funders.

Outside the Womb Scott Rae, Joy Riley. 2011-01-01 The use of assisted reproductive technology (ART) is on the rise in our culture as an alternative for couples facing infertility issues and single women desiring to have children. Is it right - morally, ethically, biblically - to engage this new technology? Are there some aspects of ART that are more acceptable than others? *Outside the Womb: The Ethics of Reproductive Technologies* addresses the whole issue of "making life", providing valuable information, both theologically and scientifically, for Christian couples to reflect upon as they consider the various fertility treatments.

Reproductive Sciences in Animal Conservation Pierre Comizzoli, Janine L. Brown, William V. Holt. 2019-08-30 This second edition emphasizes the environmental impact on reproduction, with updated chapters throughout as well as complete new chapters on species such as sharks and rays. This is a wide-ranging book that will be of relevance to anyone involved in species conservation, and provides critical perspectives on the real utility of current and emerging reproductive sciences. Understanding reproductive biology is centrally important to the way many of the world's conservation problems should be tackled. Currently the extinction problem is huge, with up to 30% of the world's fauna being expected to disappear in the next 50 years. Nevertheless, it has been estimated that the global population of animals in zoos encompasses 12,000 - 15,000 species, and we anticipate that every effort will be made to preserve these species for as long as possible, minimizing inbreeding effects and providing the best welfare standards available. Even if the reproductive biology community cannot solve the global biodiversity crisis for all wild species, we should do our best to maintain important captive populations. Reproductive biology in this context is much more than the development of techniques for helping with too little or too much breeding. While some of the relevant techniques are useful for

individual species that society might target for a variety of reasons, whether nationalistic, cultural or practical, technical developments have to be backed up by thorough biological understanding of the background behind the problems.

under the impact of new biomedical technologies. Selective reproductive technologies (SRTs) - technologies that aim to prevent or promote the birth of particular kinds of children - are increasingly widespread across the globe. Wahlberg and Gammeltoft bring together a collection of essays providing unique ethnographic insights on how SRTs are made available within different cultural, socio-economic and regulatory settings and how people perceive and make use of these new possibilities as they envision and try to form their future lives. Topics covered include sex-selective abortions, termination of pregnancies following detection of fetal anomalies during prenatal screening, the development of preimplantation genetic diagnosis techniques as well as the screening of potential gamete donors by egg agencies and sperm banks. This is invaluable reading for scholars of medical anthropology, medical sociology and science and technology studies, as well as for the fields of gender studies, reproductive health and genetic disease research.

Emerging Topics in Reproduction Douglas T.

Carrell, Catherine Racowsky, Peter N. Schlegel, Alan H.

DeCherney. 2018-06-20 Previously known as Biennial Review of Infertility, the fifth installment in this series brings together the most current research and clinical evidence on male and female infertility, emerging assisted reproductive technologies (ART) and evolving controversies in reproductive medicine. In this latest volume, parts one and two discuss recent developments in male and female infertility respectively, including fertility preservation in the male adolescent cancer patient, the clinical relevance of sperm RNA, the management of subclinical hypothyroidism, and the effects of endocrine-disrupting chemicals. Part three covers the latest in ART, such as evidence-based morphological approaches for embryo selection and culturing human embryos. The final section highlights controversies in reproductive medicine, including the use of preimplantation genetic screening (PGS) and blastocyst transfer, as well as the ethics surrounding a maximum BMI for IVF. Providing an ongoing appraisal of current knowledge, and featuring contributions from leading experts in the field, Emerging Topics in Reproduction, Volume 5 is a worthy addition to the series and an ideal resource on the latest topics for reproductive medicine and REI specialists, OB-GYNs, andrologists, and any clinician working with infertility.

Science and Babies Institute of Medicine, Suzanne Wymelenberg. 1990-02-01 By all indicators, the reproductive health of Americans has been deteriorating since 1980. Our nation is troubled by rates of teen pregnancies and newborn deaths that are worse than almost all others in the Western world. *Science and Babies* is a straightforward presentation of the major reproductive issues we face that suggests answers for the public. The book discusses how the clash of opinions on sex and family planning prevents us from making a national commitment to reproductive health; why people in the United States have fewer contraceptive choices than those in many other countries; what we need to do to improve social and medical services for teens and people living in poverty; how couples should shop for a fertility service and make consumer-wise decisions; and what we can expect in the future—featuring interesting accounts of potential scientific advances.

The Routledge Handbook of Anthropology and

Reproduction Sallie Han, Cecília Tomori. 2021-11-09 The Routledge Handbook of Anthropology and Reproduction is a comprehensive overview of the topics, approaches, and trajectories in the anthropological study of human reproduction. The book brings together work from across the discipline of anthropology, with contributions by established and emerging scholars in archaeological, biological, linguistic, and sociocultural anthropology. Across these areas of research, consideration is given to the contexts, conditions, and contingencies that mark and shape the experiences of reproduction as always gendered, classed, and racialized. Over 39 chapters, a diverse range of international scholars cover topics including: Reproductive governance, stratification, justice, and freedom. Fertility and infertility. Technologies and imaginations. Queering reproduction. Pregnancy, childbirth, and reproductive loss. Postpartum and infant care. Care, kinship, and alloparenting. Exercise and Human Reproduction Diana Vaamonde, Stefan S du Plessis, Ashok Agarwal. 2016-03-07 Providing a comprehensive review of the interactions between exercise and human reproduction, this unique text focuses on both the positive and negative consequences of sport and physical activity on male and female fertility and infertility and the biological mechanisms and processes behind them. Beginning with a review of the structure and function of the male and female reproductive systems as well as fertilization and gestation, the discussion then turns to the physiology and endocrinology of sport and exercise, which is further elaborated in subsequent chapters on the impact of physical activity, hormonal changes, pathologies, and consequences of drug use for active men and women. Additional chapters address related topics, such as the impact of sport on young athletes and developing reproductive potential, physical activity and pregnancy, the use of oral contraceptives in athletes, oxidative stress, and the impact of nutritional deficiencies on athletes' fertility, with a final chapter providing recommendations and therapeutic guidelines for exercise-related reproductive disorders. Covering everything from the fundamental principles of sports physiology and human reproductive potential to the interaction between physical exercise and the endocrinology of the reproductive system, *Exercise and Human Reproduction* is an authoritative resource for helping clinicians understand how the reproductive system adapts to activity and exercise and offers strategies to avoid potential harm to human reproduction.
