Gels in the Conservation of Art Lora Angelova.2017-10-16 The papers in this publication will be talks at the 3 day Gels in Conservation conference held by IAP in association with Tate. The conference will be a gathering of conservators, conservation and other scientists, and students of conservation to present and discuss the theory and practical use of gels in various branches of conservation (paintings, paper, wall paintings, textiles, museum objects etc).The papers and posters present in this publication cover topics on the theory of Gels, recent developments in Gel technologies, clearance and residues, systematic evaluation of Gel properties and effects, preparation and practical issues with case studies concerning: wall paintings, easel paintings, contemporary art, textiles, archaeological objects, paper, sculpture, mixed media, traditional materials and more.

Conservation of Easel Paintings Joyce Hill Stoner,Rebecca Rushfield.2013-02-15 Conservation of Easel Paintings is the first comprehensive text on the history, philosophy, and methods of treatment of easel paintings that combines both theory with practice. With contributions from an international group of experts and interviews with important artists, this volume provides an all-encompassing guide to necessary background knowledge in technical art history, artists' materials, scientific methods of examination and documentation, with sections that present varying approaches and methods for treatment, including consolidation, lining, cleaning, retouching, and varnishing. The book concludes with a section featuring issues of preventive conservation, storage, shipping, exhibition, lighting, safety issues, and public outreach. Conservation of Easel Paintings is a crucial

resource in the training of conservation students and will provide generations of practicing paintings conservators and interested art historians, curators, directors, collectors, dealers, artists, and students of art and art history with invaluable information and guidance.

Natural Resource Conservation Daniel D. Chiras, John P. Reganold. 2010 This comprehensive book describes the ecological principles, policies, and practices required to create a sustainable future. It emphasizes practical, cost-effective, sustainable solutions to these problems that make sense from social, economic, and environmental perspectives. A focus on sustainable development puts readers in touch with one of the most significant shifts in thinking and action in the environmental and resource management arenas. A variety of lasting solutions are provided that make sense from social, economic, and environmental viewpoints. *Natural Resource Conservation and Management: Past, Present and Future, Economics, Ethics, and Critical Thinking: Tools for Creating a Sustainable Future, Lessons from Ecology, The Human Population Challenge, World Hunger: Solving the Problem Sustainably, The Nature of Soils, Soil Conservation and Sustainable Agriculture, Integrated Pest Management, Aquatic Environments, Managing Water Resources Sustainability, Water Pollution, Fisheries Conservation, Rangeland Management, Forest Management, Plant and Animal Extinction, Wildlife Management, Sustainable Waste Management, Air Pollution, Global Warming and Climate Change, Acid Deposition and Stratospheric Ozone Depletion, Minerals, Mining, and a Sustainable Society, Nonrenewable Energy Resources: Issues and Options, Creating a Sustainable System of Energy.* Intended for those interested in gaining a basic knowledge of natural resources and conservation

Contemporary Theory of Conservation Salvador Munoz-Vinas. 2012-05-23 Classical theories of conservation are well known in the heritage community, but in the last two decades

thinking has shifted, and classical theory has faced increasing criticism. Contemporary Theory of Conservation brings together current ideas in conservation theory, presenting a structured, coherent analysis of the subject for the first time. This engaging and readable text is split into 3 parts. The first, Fundamentals of conservation, addresses the identity of conservation itself, and problems arising when classical conservation theories are applied. The second part, Questioning classical theories, delves deeper into the criticism of classical ideas such as reversibility. This leads on to the creation of new paradigms such as sustainability, which are covered in the final part of the book, Conservation ethics.

Manual on the Conservation of Paintings International Museum Office. 1997 This book is a reprint facsimile of the manual originally published in English in 1940, based on the first International Conference for the Study of Scientific Methods for the Examination and Preservation of Works of Art, held in Rome in 1930. This congress can be seen as one of the most significant dates in the history of conservation. The Manual is a seminal work, both for its intrinsic value and the influence it has had and still has on the museum and conservation worlds.

Science and Technology for the Conservation of Cultural Heritage

Miguel Angel Rogerio-Candelera, Massimo Lazzari, Emilio Cano. 2013-10-01 From 2nd to 5th October 2012 an International Congress on Science and Technology for the conservation of Cultural Heritage was held in Santiago de Compostela, Spain, organized by the Universidade of Santiago de Compostela on behalf of TechnoHeritage Network. The congress was attended by some 160 participants from 10 countries, which presented a tot

Conservation of Easel Paintings Joyce Hill Stoner, Rebecca Rushfield. 2020-11-29 Conservation of Easel Paintings, Second Edition provides a much-anticipated update to the previous edition, which has come to be known internationally as an invaluable and comprehensive text on the history, philosophy and methods of the treatment of easel paintings. Including 49 chapters written by more than 90 respected authors from around the world, this volume offers the necessary background knowledge in technical art history, artists' materials and scientific methods of examination and documentation. Later sections of the book provide information about the varying approaches and methods for treatment and issues of preventive conservation, as well as valuable reflections on storage, shipping, and exhibition. Including exciting developments that have taken place since the last edition was published, the book also covers new techniques of examination, especially MacroXRF scanning and Reflectance Transmission Imagery. Drawing on research presented at recent professional conferences, information about innovative methods for cleaning modern and contemporary paintings and insights into modern oil paints is also included. Incorporating the latest regulations and understanding of health and safety practices and integrating theory with practice throughout, *Conservation of Easel Paintings, Second Edition* will continue to be an indispensable reference for practicing conservators. It will also be an essential resource for students taking conservation courses

around the world.

Preservation and Conservation for Libraries and Archives Nelly Balloffet, Jenny Hille, Judith Reed. 2009-04-30 For any library, archive, or historical society committed to getting materials back into circulation as quickly as possible, this reference offers a one-stop solution. From the issues relevant to directors to hands-on instructions for technicians, it's an excellent reference for the entire library.

Materials for Conservation C V Horie. 2013-10-22 *Materials for Conservation: Organic Consolidants, Adhesives and Coatings* provides an overview of one aspect of materials conservation treatment, particularly the properties of organic consolidants, adhesives, and coatings. The contents of the book are divided into two parts; these parts are background information and survey of polymers. The coverage of the first part includes polymer science and the uses and requirements of applied polymers. The second part covers resins, vinyl, thermoplastics, fillers, and colorants. The text will be most useful to individuals involved in the management and conservation of historic materials, such as museum curators. Materials engineer and polymer chemists will also benefit from the book.

Practical Preservation and Conservation Strategies for Libraries Brian J. Baird. 2018-02-09 Designed as a "how-to" manual, *Practical Preservation and Conservation Strategies for Libraries* provides librarians with practical information to help them grapple with specific preservation challenges by identifying areas of concern, optimizing the use of resources put towards preservation, and establishing goals for continual improvement over time. Straightforward and pragmatic, it helps a library to reduce immediate and long-term preservation costs, and strengthen a library's collection development goals. Topics include: Preservation in the digital age Establishing long-term preservation goals Environmental conditions Preservation needs of specific collections Understanding use patterns for library

materials Identifying potential threats to a collection Recognizing readily available preservation resources Almost 50 photographs, figures, checklists, and other tools make this a practical guide libraries will use on a day-to-day basis.

Nature's Best Hope Douglas W. Tallamy.2020-02-04 A NEW YORK TIMES BESTSELLER Douglas W. Tallamy's first book, *Bringing Nature Home*, awakened thousands of readers to an urgent situation: wildlife populations are in decline because the native plants they depend on are fast disappearing. His solution? Plant more natives. In this new book, Tallamy takes the next step and outlines his vision for a grassroots approach to conservation. *Nature's Best Hope* shows how homeowners everywhere can turn their yards into conservation corridors that provide wildlife habitats. Because this approach relies on the initiatives of private individuals, it is immune from the whims of government policy. Even more important, it's practical, effective, and easy—you will walk away with specific suggestions you can incorporate into your own yard. If you're concerned about doing something good for the environment, *Nature's Best Hope* is the blueprint you need. By acting now, you can help preserve our precious wildlife—and the planet—for future generations.

Care and Conservation of Manuscripts 13 Matthew James Driscoll.2012 *Care and Conservation of Manuscripts* collects the best contemporary scholarship on the conservation, preservation, and use of historic manuscripts, often engaging issues surrounding the history of books and manuscripts as well. Volume 13 contains over thirty contributions by top scholars in the field. It covers an array of topics, including the conservation of two composite Anselm manuscripts from the twelfth century and the refurbishment of a group of medieval manuscripts in the library of Henry VIII. Richly illustrated, the journal sets a high standard for the study of manuscript preservation and management.

Architecture in Conservation James Strike.1994-02-03 One of the problems faced by heritage organizations and museums is

adapting old buildings to their needs or building new ones to fit in with historic sites. How exactly do you create a visitor's centre at Stonehenge? The real difficulty lies where the budget is minimal, and the potential damage to the environment or setting enormous. Architecture i

Water Conservation and Wastewater Treatment in BRICS

Nations Pardeep Singh, Yulia Milshina, Kangming Tian, Deepak Gusain, João Paulo Bassin. 2020-05-13 Water Conservation and Wastewater Treatment in BRICS Nations: Technologies, Challenges, Strategies, and Policies addresses issues of water resources—including combined sewer system overflows—assessing effects on water quality standards and protecting surface and sub-surface potable water from the intrusion of saline water due to sea level rise. The book's chapters incorporate both policies and practical aspects and serve as baseline information for future adaption plans in BRICS nations. Users will find detailed important information that is ideal for policymakers, water management specialists, BRICS nation undergraduate or university students, teachers and researchers. Presents tools and techniques that can be used to preserve water resources, including groundwater and surface water Provides geophysical methods to quantitatively monitor physical earth processes associated with water resources, such as contaminant transport and ecological and climate change investigations and monitoring Includes desalination techniques which can solve the issue of scarce drinking water

Historical and Philosophical Issues in the Conservation of Cultural

Heritage Nicholas Price, M. Kirby Talley, Alessandra Melucco Vaccaro. 2016-09-23 This volume is the first comprehensive collection of texts on the conservation of art and architecture to be published in the English language. Designed for students of art history as well as conservation, the book consists of forty-six texts, some never before translated into English and many originally published only in obscure or foreign journals. The thirty

major art historians and scholars represented raise questions such as when to restore, what to preserve, and how to maintain aesthetic character. Excerpts have been selected from the following books and essays: John Ruskin, *The Seven Lamps of Architecture*; Bernard Berenson, *Aesthetics and History in the Visual Arts*; Clive Bell, *The Aesthetic Hypothesis*; Cesare Brandi, *Theory of Restoration*; Kenneth Clark, *Looking at Pictures*; Erwin Panofsky, *The History of Art as a Humanistic Discipline*; E. H. Gombrich, *Art and Illusion*; Marie Cl. Berducou, *The Conservation of Archaeology*; and Paul Philippot, *Restoration from the Perspective of the Social Sciences*. The fully illustrated book also contains an annotated bibliography and an index.

Global Perspectives for the Conservation and Management of Open-Air Rock Art Sites

António Batarda Fernandes, Melissa Marshall, Inés Domingo. 2022-07-29 *Global Perspectives for the Conservation and Management of Open-Air Rock Art Sites* responds to the growth in known rock art sites across the globe and addresses the need to investigate natural and human-originated threats to them as well as propose solutions to mitigate resulting deterioration. Bringing together perspectives of international research teams from across five continents, the chapters in this book are divided into four discrete parts that best reflect the worldwide scenarios where conservation and management of open-air rock art sites unfolds: 1) ethics, community and collaborative approaches; 2) methodological tools to support assessment and monitoring; 3) scientific examination and interventions; and 4) global community and collaborative case studies innovating methodologies for ongoing monitoring and management. The diverse origin of contributions results in a holistic and interdisciplinary approach that conciliates perceived intervention necessity, community and stakeholders' interests, and rigorous scientific analysis regarding open-air rock art conservation and management. The book unites the voices of the global community in tackling a significant challenge: to ensure a

better future for open-air rock art. Moving conservation and management of open-air rock art sites in from the periphery of conservation science, this volume is an indispensable guide for archaeologists, conservators and heritage professionals involved in rock art and its preservation.

CONSERVATION OF PAPERS AND TEXTILES National Research Institute of Cultural Heritage (South Korea).2012-11-21 This publication introduces conservation techniques and research outcome of selected conservation projects for paper and textile objects. This publication introduces conservation techniques and research outcome of selected conservation projects for paper and textile objects. It compiles various kinds of resource on conservation treatment of paper and textile objects such as paintings ancient documents and costumes. It consists of essays on techniques and materials of conservation treatment,scientific analysis,and storage methods with case studies of previous conservation treatments to display general practice of conserving paper and textile objects in Korea. Case studies have been selected among previous treatments executed by major conservation institutes such as National Research Institute of Cultural Heritage, and which recorded information clearly on materials and techniques applied to the artifacts during conservation process in written documents. Nature's Matrix Ivette Perfecto,John H. Vandermeer,Angus Wright.2009 Landscapes are frequently seen as fragments of natural habitat surrounded by a 'sea' of agriculture. But recent ecological theory shows that the nature of these fragments is not nearly as important for conservation as is the nature of the matrix of agriculture that surrounds them. Local extinctions from conservation fragments are inevitable and must be balanced by migrations if massive extinction is to be avoided. High migration rates only occur in what the authors refer to as 'high quality' matrices, which are created by alternative agroecological

techniques, as opposed to the industrial monocultural model of agriculture. The authors argue that the only way to promote such high quality matrices is to work with rural social movements. Their ideas are at odds with the major trends of some of the large conservation organizations that emphasize targeted land purchases of protected areas. They argue that recent advances in ecological research make such a general approach anachronistic and call, rather, for solidarity with the small farmers around the world who are currently struggling to attain food sovereignty. Nature's Matrix proposes a radically new approach to the conservation of biodiversity based on recent advances in the science of ecology plus political realities, particularly in the world's tropical regions.

Hyperbolic Conservation Laws and the Compensated Compactness Method Yunguang Lu. 2002-09-27 The method of compensated compactness as a technique for studying hyperbolic conservation laws is of fundamental importance in many branches of applied mathematics. Until now, however, most accounts of this method have been confined to research papers. Offering the first comprehensive treatment, Hyperbolic Conservation Laws and the Compensated Comp

Numerical Methods for Conservation Laws

LEVEQUE. 2013-11-11 These notes developed from a course on the numerical solution of conservation laws first taught at the University of Washington in the fall of 1988 and then at ETH during the following spring. The overall emphasis is on studying the mathematical tools that are essential in developing, analyzing, and successfully using numerical methods for nonlinear systems of conservation laws, particularly for problems involving shock waves. A reasonable understanding of the mathematical structure of these equations and their solutions is

first required, and Part I of these notes deals with this theory. Part II deals more directly with numerical methods, again with the emphasis on general tools that are of broad use. I have stressed the underlying ideas used in various classes of methods rather than presenting the most sophisticated methods in great detail. My aim was to provide a sufficient background that students could then approach the current research literature with the necessary tools and understanding. Without the wonders of TeX and LaTeX, these notes would never have been put together. The professional-looking results perhaps obscure the fact that these are indeed lecture notes. Some sections have been reworked several times by now, but others are still preliminary. I can only hope that the errors are not too blatant. Moreover, the breadth and depth of coverage was limited by the length of these courses, and some parts are rather sketchy.

Chemicals and Methods for Conservation and Restoration

Johannes Karl Fink. 2017-06-15 Before the 1970s, most information concerning the conservation and restoration of paintings, wood, and archaeological artefacts were focused on the history of the artefacts, previous attempts of conservation, and the future use of these artefacts. The technical methods of how the restoration and conservation were made were dealt with only very briefly. Today, sophisticated methods of scientific analysis such as DNA are common place, and this encourages conservators and scientists to work together to work out the development of new methods for analysis and conservation of artefacts. This book focuses on the chemicals used for conservation and restoration of various artefacts in artwork and archaeology, as well as special applications of these materials. Also the methods used, both methods for cleaning, conservation and restoration, as well as methods for the analysis of the state of the respective artefacts. Topics include oil paintings, paper conservation, textiles and dyes for them, archaeological wood, fossils, stones, metals and metallic coins, and glasses, including

church windows.

Managing Conservation in Museums Suzanne Keene.2002

Explaining and critically reviewing management procedures such as performance indicators and strategic planning, this book shows how techniques from mainstream management can be used to facilitate a holistic and professional approach to the business of conservation and collection preservation. It offers practical guidance on strategy, quantitative planning and condition surveying, and presents many solutions to the challenges faced by museum staff and conservation specialists. This new edition takes into account changes such as the arrival of the Heritage Lottery Fund, policies for access and the growing convergence of museums, libraries and archives. It also highlights the advent of digital collections and the use of information and communications technology. * Learn about professional management information techniques and how to apply them to the preservation of collections * Covers the latest issues in conservation management, including information on digital collections, to give readers a full understanding of the subject * An ideal reference which demystifies the issue of 'management'

The Conservation of Decorated Surfaces on Earthen Architecture

Leslie Rainer,Angelyn Bass Rivera.2006 For millennia, people of all cultures have decorated the surfaces of their domestic, religious, and public buildings. Earthen architecture in particular has been, and continues to be, a common ground for surface decoration such as paintings, sculpted bas-relief, and ornamental plasterwork. This volume explores the complex issues associated with preserving these surfaces. Case studies from Asia, Europe, Africa, the Middle East, and the Americas are presented. The publication is the result of a colloquium held in 2004 at Mesa Verde National Park, Colorado, co-organized by the Getty Conservation Institute (GCI) and the National Park Service (NPS). The meeting brought together fifty-five conservators, cultural resource managers, materials scientists, engineers, architects,

archaeologists, anthropologists, and artists from eleven countries. Divided into four themes--Archaeological Sites, Museum Practice, Historic Buildings, and Living Traditions--the papers examine the conservation of decorated surfaces on earthen architecture within these different contexts.

Preserve, Protect, and Defend Barbara Appelbaum.2018-05-10
Preserve, Protect, and Defend: A Practical Guide to the Care of Collections is an essential text for museum professionals, volunteers and consultants across a wide range of responsibilities: curators, registrars, collections managers, archivists, museum administrators, museum educators, conservators, art historians, operations staff, designers, engineers, architects, building contractors, suppliers, security specialists, and pest control experts. The topics are wide ranging: conservation assessments; practical advice for examining collections and buildings to uncover collection safety issues; routine collection safety practices; preparing for the unexpected, including wind and water penetration, fire and smoke, and infestations; and controlling the museum environment including temperature and relative humidity, light and lighting, and air quality. The book also offers an inside look into the world of museums and the people who work in them. Written in the accessible-and sometimes irreverent-style that the author is famous for, this book is a must-have for everyone who cares for collections and the buildings that house them-museums of all sizes, archives, libraries, and private collections.

Stone Conservation Clifford A. Price,Eric Doehne.2011-02-15
First published in 1996, this volume has been substantially updated to reflect new research in the conservation of stone monuments, sculpture, and archaeological sites.

Collections Vol 8 N3 Collections.2012-12-14
Collections: A Journal for Museum and Archives Professionals is a multi-disciplinary peer-reviewed journal dedicated to the discussion of all aspects of handling, preserving, researching, and organizing

collections. Curators, archivists, collections managers, preparators, registrars, educators, students, and others contribute.

Conservation Skills for the 21st Century Chris Caple, Emily Williams. 2023-05-12 Conservation Skills for the 21st Century provides a much-needed update to the original Conservation Skills volume, presenting an overview of current issues facing conservators of historic and artistic works. Beginning with the basics – why the past is important, as well as an overview of the nature and history of conservation – the book allows the reader to develop a holistic appreciation of the subject. As with the first edition, this volume assists with the development of judgement in conservation students and young professionals. A selection of new case studies representing issues conservators are likely to face in the 21st century illustrates the crucial considerations that must be made when proposing and executing a conservation treatment. Incorporating recent developments and use of new technologies in conservation processes, the book also covers topics such as conservation ethics; recording and documentation; investigating and cleaning objects; stabilisation and restoration; values, decision-making, and responsibilities; preventive conservation; approaches to the treatment of working and socially active objects; sustainability in conservation; and the conservator's role as advocate. With detailed case studies and written in a clear, accessible style, Conservation Skills for the 21st Century remains essential reading for student conservators and conservation professionals around the globe working across a wide range of conservation disciplines.

Stone Conservation: Principles and Practice Alison Henry. 2015-12-08 Winner of the RIBA Book Award, this important and timely publication brings together contributions from leading stone conservation practitioners. It discusses the philosophical principles on which stone conservation is founded and the need to understand the full history and development of a building before

starting work. Other topics covered in this book include consolidation, cleaning, and the replacement of stone; conservation of different stone types, including limestone, sandstone, and marble; problems of dealing with polychrome stone; and finally, issues relating to church monuments and graveyards, taking account of the need for good maintenance and health and safety requirements. The book is illustrated with the authors' own examples of stone conservation in practice. Architects, surveyors and craftsmen involved in the conservation of stone structures will find this both a practical and useful reference work.

Preventive Conservation Lisa Elkin, Christopher Norris. 2019-05
Good storage is the foundation of effective collection care, advancing conservation while at the same time promoting accessibility and use. *Preventive Conservation: Collection Storage* covers the storage of all types of collections, including science, fine and decorative art, history, library, archive, and digital collections. It concentrates on preventive conservation and emphasizes a risk management approach. Reflecting the breadth of its scope, the new book is collaboration between The Society for the Preservation of Natural History Collections; the American Institute for Conservation of Historic & Artistic Works; the Smithsonian Institution; and the George Washington University Museum Studies Program.

An Introduction to Methods and Models in Ecology, Evolution, and Conservation Biology Stanton Braude, Bobbi S. Low. 2010-01-04
An innovative introduction to ecology and evolution This unique textbook introduces undergraduate students to quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation. It explores the core concepts shared by these related fields using tools and practical skills such as experimental design, generating phylogenies, basic statistical inference, and persuasive grant writing. And contributors use examples from their own cutting-

edge research, providing diverse views to engage students and broaden their understanding. This is the only textbook on the subject featuring a collaborative active learning approach that emphasizes hands-on learning. Every chapter has exercises that enable students to work directly with the material at their own pace and in small groups. Each problem includes data presented in a rich array of formats, which students use to answer questions that illustrate patterns, principles, and methods. Topics range from Hardy-Weinberg equilibrium and population effective size to optimal foraging and indices of biodiversity. The book also includes a comprehensive glossary. In addition to the editors, the contributors are James Beck, Cawas Behram Engineer, John Gaskin, Luke Harmon, Jon Hess, Jason Kolbe, Kenneth H. Kozak, Robert J. Robertson, Emily Silverman, Beth Sparks-Jackson, and Anton Weisstein. Provides experience with hypothesis testing, experimental design, and scientific reasoning Covers core quantitative models and methods in ecology, behavioral ecology, evolutionary biology, and conservation Turns discussion sections into thinking labs Professors: A supplementary Instructor's Manual is available for this book. It is restricted to teachers using the text in courses. For information on how to obtain a copy, refer to: http://press.princeton.edu/class_use/solutions.html

A Practical Approach to Water Conservation for Commercial and Industrial Facilities Mohan

Seneviratne.2007-07-11 Industry and commerce use vast amounts of water and in some parts of the world water is becoming a scarce commodity. We need to take more care in our future use of water, and this book is a 'best practice' manual for industrial and commercial users world-wide. It offers a practical account of the measures which can be taken to re-educate industrial and commercial users in the techniques of water saving and re-use anywhere in the world. The principles are covered in detail and supported by examples from specific industries and commercial operations. Author Mohan Seneviratne is Manager of Sydney Water's 'Every Drop Counts Business Program', which won the prestigious 2006 Stockholm Industry Water Award in recognition of how the utility is working in partnership with business, industry and government to help ensure the long-term sustainability of Sydney's water supply. * The first book to cover water conservation for industrial users from processing plants to pubs and clubs * Provides practical advice on implementing water conservation for users in various industry sectors * Written by a

Conservation Treatment Methodology Barbara Appelbaum.2012-05-04 Conservation Treatment Methodology presents a systematic approach to decision-making for conservation treatments. The methodology is applicable to all cultural property, independent of object type or material, and its use will enable conservators to be more confident in their treatment decisions. Conservation Treatment Methodology is illustrated with numerous examples that emphasize the equal importance of the physical and cultural aspects of objects for decision-making. The book also explains how the history of an object and the meaning that it holds for its owner or custodian contribute to determining its treatment. Conservation Treatment Methodology is an essential text for conservators, historic preservation specialists, and restorers, as well as students. Since it is not a technical manual about how to carry out treatments, the book will also be of value to art historians and museum personnel who work with conservators. This book is unique in its overarching, multidisciplinary approach. The writing is not only clear, but entertaining and engaging. Dan Kushel, Distinguished Teaching Professor, Art Conservation Department, Buffalo New York) State College Barbara Appelbaum is one of the premier objects conservators in the United States and the author of Guide to Environmental Protection of Collections. Practicing in New York, Appelbaum was trained at New York University and began her career at The Brooklyn Museum. The author treats a wide range of object types. Projects of note have included George Washington's leather portfolio, a Marcel Duchamp urinal, and a Marilyn Monroe dress.

Natural Resource Conservation Oliver S. Owen.1975
Proceedings of the 9th International Congress on Deterioration and Conservation of Stone V. Fassina.2000-06-13 The conservation of historic monuments, sites and structures constitutes an inter-professional discipline co-ordinating a range

of aesthetic historic, scientific and technical methods. Conservation is a rapidly developing field, which, by its true nature, is a multidisciplinary activity with experts respecting one another's contributions and combining to form an effective team. Conservation is an artistic activity aided by scientific and historical knowledge. Main topics at this Congress included: - the most appropriate methodology for the assessment of the degree of weathering of stone - development of new methods and instruments for the diagnosis of the state of conservation, for the study of alteration mechanisms and for conservation treatments. - the definition of Technical European Standard Methods for the evaluation of conservation treatments of artistic and historic stone objects and monuments.

Timber Decay in Buildings Brian Ridout. 2013-06-17 This is the first book to tackle all the issues relating to timber decay. It presents the facts and explores timber decay problems through case studies. These are illustrated with clear self-explanatory photographs for the reader to use as a diagnostic aid. Section 1 discusses timber as a living material, Section 2 deals with decay organisms and their habitat requirements. Section 3 moves on to the building as an environment for timber and discusses the ways in which wood responds to moisture change. Section 4 ends with an approach to timber decay which integrates knowledge on the decay organism, its requirements and natural predators with appropriate and targeted chemical treatments.
