The Zambezi River Basin Jonathan Lautze,Zebediah Phiri,Vladimir Smakhtin,Davison Saruchera.2017-07-28 The Zambezi river is the fourth longest in Africa, crossing or bordering Zambia, Angola, Namibia, Botswana, Zimbabwe and Mozambique. The river basin is widely recognised as one of the most important basins in southern Africa and is the focus of contested development, including water for hydropower and for agriculture and the environment. This book provides a thorough review of water and sustainable development in the Zambezi, in order to identify critical issues and propose constructive ways forward. The book first reviews the availability and use of water resources in the basin, outlines the basin's economic potential and highlights key concerns related to climate vulnerability and risk. Focus is then devoted to hydropower and the water-energy-food (WEF) nexus, sustainable agricultural water management, and threats and opportunities related to provision of ecosystem services. The impact of urbanisation and water quality is also examined, as well as ways to enhance transboundary water cooperation. Last, the book assesses the level of water security in the basin, and provides suggestions for achieving Sustainable Development Goal (SDG) 6. Throughout, emphasis is placed on entry points for basin-level management to foster improved paths forward.

**Naturalistic Decision Making** Caroline E. Zsombok,Gary Klein.2014-01-02 If you aren't using the term naturalistic decision making, or NDM, you soon will be. Even as a very young field, NDM has already had far-reaching applications in areas as diverse as management, aviation, health care, nuclear power, military command and control, corporate teamwork, and manufacturing. Put simply, NDM is the way people use their experience to make decisions in the context of a job or task. Of particular interest to NDM researchers are the effects of high-stake consequences, shifting goals, incomplete information, time pressure, uncertainty, and other conditions that are present in most of today's work places and that add to the complexity of decision making. Applications of NDM research findings target decision aids and training that help people in their decision-making processes. This book reports the findings of top NDM researchers, as well as many of their current applications. In addition, the book offers a historical perspective on the emergence of this new paradigm, describes recent theoretical and methodological advancements, and points to future developments. It was written for people interested in decision making research and applications relative to a diverse array of work settings and products such as human-computer interfaces, decision support systems, individual and team training, product designs, and organizational development and planning.

Hypersonic Flow Theory Wallace Hayes.2012-12-02 Hypersonic Flow Theory presents the fundamentals of fluid mechanics, focusing on the hypersonic flow theory and approaches in theoretical aerodynamics. This book discusses the assumptions underlying hypersonic flow theory, unified supersonic-hypersonic similitude, two-dimensional and axisymmetric bodies, and circular cylinder. The constant-streamtube-area approximation, streamtube-continuity methods, and tangent-wedge and tangent-cone are also deliberated. This text likewise covers the similar laminar boundary layer solutions, bluntness induced interactions on slender bodies, and free molecule transfer theory.

The dynamics of hypersonic flight or hypersonic wing theory, magnetohydrodynamic theory, or any developments involving treatment of the Boltzmann equation are not included. This publication is intended for hypersonic aerodynamicists, students, and researchers conducting work on the hypersonic flow phenomena.

*Warm Waters* Vlad Sokhin.2021-09-07 Documenting the devastating effects of global warming and climate change, *Warm Waters* is a multi-year photographic documentary across the Pacific and Arctic Oceans, from Northern Alaska to the remote outposts of New Zealand. The journey started in 2013 in Papua New Guinea, where photographer Vlad Sokhin documented illegal logging and deforestation. In 2014, Sokhin covered the rise of sea levels, coastal erosion and the effects of El Niño in Papua New Guinea, Kiribati, Nauru, the Marshall Islands and Niue. In 2015, 2016 and 2018, he extensively covered the aftermath of tropical cyclones across Pacific island nations and delved deeper into documenting struggles of the affected communities, their resilience and adaptation to the realities of global warming. In 2019, he documented severe drought in Timor-Leste, caused by the weather anomalies. *Warm Waters* also looks at other environmental issues our planet is facing, such as climate migrants and their resettlement, permafrost melting, coral bleaching, and the need for renewable energy. The book shows the evidence of fight, adaptation, and hope of remote island and coastal communities. It takes you right into the lives of Inupiat and Yupik people in Alaska, and to the towns and villages that are being destroyed by the sea and coastal erosion on the Russian Kamchatka Peninsula. You will see how scientists work in the field, studying the effects of climate change, and how the people, affected by extreme weather conditions, are trying to survive and rebuild their lives after catastrophic events have ruined their land and homes. *Warm Waters* not only shows tragedy however; it shows the beauty of our planet, communities living in harmony with nature, and people that are tirelessly working to protect their fragile shores from the biggest environmental threat ever they have ever faced.

**Legal Translation and Court Interpreting: Ethical Values, Quality, Competence Training**

Wallace.2017-10-24 This multidisciplinary volume offers a systematic analysis of translation and interpreting as a means of guaranteeing equality under the law as well as global perspectives in legal translation and interpreting contexts. It offers insights into new research on • language policies and linguistic rights in multilingual communities • the role of the interpreter • accreditation of legal translators and interpreters • translator and interpreter education in multiple countries and • approaches to terms and tools for legal settings. The authors explore familiar problems with a view to developing new approaches to language justice by learning from researchers, trainers, practitioners and policy makers. By offering multiple methods and perspectives covering diverse contexts (e.g. in Austria, Belgium, England, Estonia, Finland, France, Germany, Hong Kong, Ireland, Norway, Poland), this volume is a welcome contribution to legal translation and interpreting studies scholars and practitioners alike, highlighting settings that have received limited attention, such as the linguistic rights of vulnerable populations, as well as practical solutions to methodological and terminological problems.

**Three Dimensional Grid Generation for Complex Configurations - Recent Progress** .1988 This AGARDograph surveys some of the capabilities of the CFD community for gridding complex three-dimensional configurations. The intent is to provide some insight as to the present state of grid generation for aircraft configurations in order to help assess whether this task presents a long term stumbling block to routine use of CFD in aerodynamic applications. This AGARDograph begins with a brief review of some of the techniques that are available for generating body-conforming curvilinear grids. In order to assess capabilities in grid generation, colleagues at selected institutions were solicited to describe their experiences and difficulties in grid generation of complex configurations. The intent here was not to describe the very latest in grid generation procedures, but to solicit honest comments about what are the difficulties in generating practical grids and what steps are taken to meet these difficulties. These experiences, which comprise the heart of this AGARDograph, are presented as case histories. Keywords: Computational fluid dynamics; Nato furnished; Aerodynamic configuration; Grids(coordinates); Computation; Computer graphics; Wing body configurations; Generating functions; Evaluation. *The harvest of wildlife for bushmeat and traditional medicine in East, South and Southeast Asia* Tien Ming Lee,Amanda Sigouin,Miguel Pinedo-Vasquez,Robert Nasi.2014-11-11 Bushmeat has always provided a source of nutrition and traditional medicine for local people throughout Asia; this important resource is becoming increasingly under pressure due to loss of forest and overharvesting because of rising demand from growing human populations and trade (legal and illegal). For this reason, the conservation of forests and sustainable use of wildlife are both imperative for improving rural livelihoods and poverty alleviation. A comprehensive literature review yielded 236 papers relevant to this topic, with the greatest number of papers discussing Southeast Asia (61%) followed by South Asia (22%) and East Asia (16%). Potential solutions that emerged from the review include the use of: measures of harvest to better gauge sustainable offtake levels, protected areas and

recovery zones; improved governance; and the implementation of co-management partnerships. Potential solutions for the traditional medicine trade include urban demand reduction campaigns, introduction of synthetic alternatives, increased efforts to reduce illegal trade, and implementation of certification schemes for wildlife products. In all of these cases, a myriad of social implications, such as the importance and spiritual significance of bushmeat in different cultures, the preferences for bushmeat over farmed alternatives and the tradition of wildlife-derived medicines, must be considered. Areas for further research include: the study of climate change on bushmeat and food security; the traditional medicine supply chain; consumer reaction to synthetic alternatives; the use of bushmeat particularly for medicinal purposes in urban societies; and the negative effects of the growing wildlife trade on local livelihoods.

**Survive--The Economic Collapse** Piero San Giorgio.2021-12-03 A valuable cram course in how to survive the rest of your life. - James Howard Kunstler. Author of *The Long Emergency*, *Too Much Magic*, *The Geography of Nowhere*, and *The World Made By Hand* For billions of people, the ongoing economic crisis has marked the end of the world as we know it. The American Dream (and ones like it) of a guaranteed job, a home, and a pension, has given way to the nightmare of unemployment, unpayable debt, depression, and uncertainty. In *Survive The Economic Collapse*, Piero San Giorgio looks behind the headlines and sound bites and demonstrates that today's economic crisis is no temporary downturn, nor is it simply the result of bad policies. The crisis is the beginning of the end of a global paradigm when expectations of endless economic growth and progress crash up against the reality of scarcity and limited resources. The implications of the collapse cannot be ignored: a steep decline in living standards due to the evaporation of easy credit; a new political landscape that might inspire nationalism, geopolitical reshuffling, and wars over resources; and, potentially, a reduction in global population. No mere doom-sayer, San Giorgio explains not just how to understand the crisis but overcome it to foster a resilient community, stay healthy, and become self-sufficient and productive in the interesting times that lie ahead. Packed with tactical information and resources, *Survive* is nothing less than a field manual for the apocalypse. This edition has been thoroughly reedited and includes an extensive postscript detailing global developments in the past decade.

*Colour Atlas of Paediatric Dermatology* Julian Verbov, W.N. Morley.2011-11-01 We have felt for some years that an atlas of paediatric dermatology merited a place in the world dermatological literature. Non-dermatologists find skin conditions difficult to describe and diagnose and this may be even more difficult in children. We usually rely on the parents for a history in children, although many conditions can be self-diagnosed. In this atlas we have tried to illustrate conditions seen regularly in our clinics as well as some seen more rarely but which are nevertheless important to recognize. We have limited the number of illustrations in order to produce a realistically-priced book and thus it has not always been easy to decide what to include and what to omit. However, we hope that we have produced a reasonably comprehensive work. We hope that this atlas will have a wide appeal both at home and abroad. It is a book either to read or to browse through. It is intended for senior medical students, family practitioners, and for trainees both in dermatology and in paediatrics. We would like it actually taken to skin clinics to be available for instant perusal, and to be on hand in the paediatric ward. We have said comparatively little about treatment because this alters regularly and often varies in different centres and because we do not think that an atlas is the place for this.

**The Burgess Shale** Margaret Atwood. 2017-03-17 "Atwood provides a window into her own early writing days . . . a treasure for readers interested in Canadian literature because this is where it all began." —Prairie Fire Review of Books "The outburst of cultural energy that took place in the 1960s was in part a product of the two decades that came before. It's always difficult for young people to see their own time in perspective: when you're in your teens, a decade earlier feels like ancient history and the present moment seems normal: what exists now is surely what has always existed." In this short work, Margaret Atwood, author of *The Handmaid's Tale* and "Canada's most famous writer" (*The New Yorker*), compares the Canadian literary landscape of the 1960s to the Burgess Shale, a geological formation that contains the fossils of many strange prehistoric life forms. The Burgess Shale is not entirely about writing itself, however: Atwood also provides some insight into the meager writing infrastructure of that time, taking a lighthearted look at the early days of the institutions we take for granted today—from writers' organizations, prizes, and grant programs to book tours and festivals. "Allows the reader a brief glimpse into the mind of a great writer and her perspective and experience living through what would now seem to many the Stone Age of the Canadian writing scene . . . invaluable and very readable." —Canadian Literature

Subject included are: dynamic lift, wing rock, fluid dynamics of rotary flows, mathematical modelling, non-linear data representation, vortex manipulation for control enhancement, and correlations of predictions based on rotary and oscillatory wind-tunnel and flight-test results. The complete course notes are contained in two volumes. The main part of the notes is contained in AGARD Advisory Report 265 (ADA235179). The present volume includes papers on: Unsteady aerodynamics of slender wings; Dynamic stall effects and applications to high performance aircraft; Oscillatory test techniques; Large amplitude oscillations; Oscillatory data for typical

configurations; and Forebody vortex control.--Stinet.

**Explosive Shocks in Air** Gilbert F. Kinney, Kenneth J. Graham. 2013-11-11 A purpose of science is to organize diversified factual knowledge into a coherent body of information, and to present this from the simplest possible viewpoint. This is a formidable task where our knowledge is incomplete, as it is with explosions. Here one runs the risk of oversimplification, naivete, and incompleteness.

Nevertheless a purpose of this work is to present as simply as possible a general description of the basic nature of explosions. This treatise should be of interest to all who are working with explosives such as used in construction or in demolition work, in mining operations, or in military applications. It should also be of interest to those concerned with disasters such as explosions or earthquakes, to those involved in civil defense precautions, and to those concerned with defense against terrorists. That is, this material should be of interest to all who wish to utilize, or to avoid, the effects of explosions as well as to those whose interest is primarily scientific in nature.
