Global Status Report on Noncommunicable Diseases 2010 World Health Organization.2011 This report sets out the statistics, evidence and experiences needed to launch a more forceful response to the growing threat posed by noncommunicable diseases. While advice and recommendations are universally relevant, the report gives particular attention to conditions in low- and middle-income countries, which now bear nearly 80% of the burden from diseases like cardiovascular disease, diabetes, cancer and chronic respiratory diseases. The health consequences of the worldwide epidemic of obesity are also addressed. The report takes an analytical approach, using global, regional and country-specific data to document the magnitude of the problem, project future trends, and assess the factors contributing to these trends. As noted, the epidemic of these diseases is being driven by forces now touching every region of the world: demographic aging, rapid unplanned urbanization, and the globalization of unhealthy lifestyles--Publisher's description.

Contraception for the Medically Challenging Patient Rebecca H. Allen, Carrie A. Cwiak.2014-09-03 Women with chronic medical problems are at higher risk for complications during pregnancy and therefore, they are especially in need of appropriate preconception and contraception care. Furthermore, many women with chronic medical problems do not obtain adequate preconception and contraception care. Despite published guidelines by the Centers for Disease Control and Prevention, there is a substantial gap in medical practice regarding the use of contraception in women with co-existing medical problems. *Contraception for the Medically Challenging Patient* fills the gap that currently exists in the knowledge of correct contraceptive prescribing practice and shows that inappropriate contraindications can easily become a barrier to effective contraception use among women. Chapters highlight obsolete views about appropriate candidates for contraception and address the complex contraceptive needs of today's medically challenging patients with HIV/AIDS, uterine fibroids or cardiac, neurologic or thyroid disease. The book gives attention to recommendations on the use of contraception in women with medical problems such as diabetes, obesity, epilepsy, and lupus, among others and provides comprehensive information regarding the effects that certain drugs may have on contraceptive hormone levels. While national guidelines do exist for contraceptive eligibility, this book discusses in more detail the evidence behind the guideline recommendations and the nuances that clinicians confront in daily practice.

**Medical Disorders in Obstetric Practice** Michael De Swiet.2008-04-15 Obstetricians must have a firm grounding in the diagnosis and management of diseases affecting pregnant women as in some cases these may threaten the life of mother or baby or both. This book still remains the standard reference work on medical disorders in obstetric practice in the UK and UK-influenced areas such as the former Commonwealth. Exhaustive in its coverage, it provides clear practical advice on the major medical disorders the obstetrician is likely to encounter. Each chapter reviews the pathophysiology of a complaint then applies the physiological and pathophysiological changes to the problem of diagnosis and management of the disorder as well as giving clear guidance on the welfare of the unborn One of the major strengths of the book is that each chapter teaches the principles of care and gives an appreciation of the natural history of the disease rather than just the facts. Although a scholarly and rigorous account it manages to point out the clinically relevant information that the practising obstetrician will actually need.

**Contraception for Adolescent and Young Adult Women** Amy Whitaker, Melissa Gilliam.2014-06-27 Forty-five percent of adolescents ages 15-19 have had sexual intercourse. By age 19, 75% of all adolescents have had sexual intercourse. Most adolescents select condoms as their most reliable

method of contraception. The United States continues to rank among the highest of all similarly developed countries in rates of adolescent pregnancy, and the unintended pregnancy rate is highest among women ages 20-24. The reasons for these public health statistics are myriad, but a major issue is that adolescents and young women use contraception inconsistently. Thus, there is a need for youth to learn about and use contraception consistently and effectively. Unfortunately, misinformation abounds, even among practicing clinicians. Young people need a clinician who is up to date on clinical recommendations regarding contraceptive care. The busy clinician needs information at his or her fingertips, needs to know how to create a teen-friendly environment and must exhibit best contraceptive counseling practices. Gynecologists and primary care practitioners (as well as family physicians, adolescent medicine physicians and pediatricians) are on the front lines when it comes to discussing, recommending and prescribing contraceptive options to adolescent and young women. This book is a valuable resource for these clinicians; it is the only handbook on the market on contraception for the adolescent and young adult women and it is filled with evidence-based information in an easy to read and easy to digest format. Now is an optimal time for a book of this sort. The Centers for Disease Control and Prevention just completed a clinical guideline for contraceptive care based on the World Health Organization's Medical Eligibility Criteria (MEC). The United States MEC seeks to demystify contraceptive care for all women. It also lays the groundwork for helping providers improve clinical practice in contraceptive care. Contraception for Adolescent and Young Adult Women will complement these efforts in a manner tailored to the unique needs of this population.

**Williams Obstetrics 24/E (EBOOK)** Marlene M. Corton,Kenneth J. Leveno,Steven L. Bloom,Barbara L. Hoffman.2014-05-06 The premier reference in obstetrics for more than a century - now even more relevant to today's practice Williams Obstetrics is the most detailed, comprehensive, and rigorously referenced text on the subject. Written by an author team from the world-renowned Parkland Hospital, the hallmarks of this classic are its thoroughness, scientific basis, and practical applicability for the obstetrician at the bedside. This edition of Williams Obstetrics continues to emphasize the scientific-based underpinnings and evidence-based practices of the specialty. This is accomplished by using incorporating more than 3,000 new literature citations and guidelines from the most trusted professional and academic organizations. One of the important features of the twenty-fourth edition is a greater focus on the fetus as a patient and an expanded discussion of fetal diagnosis and therapy. This is complemented by more than 100 new sonographic and MR images of common fetal abnormalities. A new reorganization of the text enables the book to highlight more effectively the myriad disorders that may complicate pregnancy. Williams Obstetrics provides a convenient, clinically relevant text of value to the busy practitioner. The book summarizes important new data that has influenced evidence-based management to improve pregnancy outcomes. Much of this data is conveniently distilled into newly created tables and diagnostic and treatment algorithms. During discussion, numerous sources are cited to provide evidence-based options for patient management. Additionally, nearly 900 images complement the text, many of which are new or enhanced. These include sonograms, MR images, photographs, diagrams, and graphs. This edition of Williams Obstetrics continues to provide clinicians with everything they need to know about the practice of obstetrics with a level of authority and quality of presentation not found in any other resource.

**pH of the Skin: Issues and Challenges** C. Surber,C. Abels,H. Maibach.2018-08-21 The concept of expressing acidity as the negative logarithm of the hydrogen ion concentration was defined and termed pH in the beginning of the 20th century. The general usefulness of the pH concept for life science was recognized and later gained importance to analytical research. Reports on results of pH measurements from living skin established the term acid mantle - the skin's own protective shield that maintains a naturally acid pH. It is invisible to the eye but crucial to the overall wellbeing of skin. Chronic alkalization can throw this acid mantle out of balance, leading to inflammation, dermatitis, and atopic skin diseases. It is therefore no surprise, that skin pH shifts have been observed in various skin pathologies. It is also obvious that the pH in topically applied preparations may play an important role. Optimal pH and buffer capacity within topical preparations not only support stability of active ingredients and auxiliary materials, but may also increase absorption of the non-ionized species of an acidic or a basic active ingredient. They may even open up opportunities to modify and correct skin pH and hence accelerate barrier recovery and maintain or enhance barrier integrity. Further efforts are needed to standardize and improve pH measurements in biological media or pharmaceutical/cosmetic vehicles to increase and ensure quality, comparability, and relevance of research data. In this volume, we present a unique collection of papers that address past, present and future issues of the pH of healthy and diseased skin. It is hoped that this collection will foster future efforts in clinical and experimental skin research.

**Evidence-Based Dermatology** Hywel Williams,Michael Bigby,Thomas Diepgen,Andrew Herxheimer,Luigi Naldi,Berthold Rzany.2009-01-22 Evidence-based Dermatology, Second Edition is a unique book in the field of clinical dermatology. Written and edited by some of the world's leading experts in evidence-based dermatology, it takes a highly evidence-based approach to the treatment of all major and many of the less common skin conditions. The toolbox at the beginning of the book explaining how to critically appraise different studies, along with the comprehensive reviewing and appraisal of evidence in the clinical chapters make this book distinctive in its field as do the treatment recommendations which are based on the discussion of the best available evidence using a question-driven approach and a common structure on dealing with efficacy, drawbacks and implications for clinical practice.

**Exploring Geovisualization** J. Dykes,A.M. MacEachren,M.-J. Kraak.2005-02-10 Sophisticated interactive maps are increasingly used to explore information - guiding us through data landscapes to provide information and prompt insight and understanding. Geovisualization is an emerging domain that draws upon disciplines such as computer science, human-computer interaction design, cognitive sciences, graphical statistics, data visualization, information visualization, geographic information science and cartography to discuss, develop and evaluate interactive cartography. This review and exploration of the current and future status of geovisualization has been produced by key researchers and practitioners from around the world in various cognate fields of study. The thirty-six chapters present summaries of work undertaken, case studies focused on new methods and their application, system descriptions, tests of their implementation, plans for collaboration and reflections on experiences of using and developing geovisualization techniques. In total, over 50 pages of color are provided in the book along with more than 250 color images on an enclosed CD-ROM.

**Hypertension Control** WHO Expert Committee on Hypertension Control,World Health Organization.1996 A state-of-the-art review of research findings that contribute to an understanding of hypertension and the best measures for its prevention and control, whether in individual patients or entire populations. Noting that elevated blood pressure is a massive health problem in almost every country, the report argues that programs for hypertension control should be an integral part of all national health care systems. With this goal in mind, the report aims to help policy makers appreciate the significance and complexities of hypertension, understand the options available for control and then select the most appropriate mix of interventions. Details range from recommended procedures for obtaining an accurate assessment of blood pressure through advice on the best drugs

for first-line treatment of hypertensive patients to a discussion of ways to educate populations about relevant lifestyle changes. Throughout the report, population-based and individual approaches are presented as complementary, synergistic strategies for hypertension control. To assist physicians as well as policy makers, the report includes abundant recommendations based on the best scientific evidence for the management of different patient groups. A section on the clinical assessment of the hypertensive patient explains the components of a coherent step-wise diagnostic process involving history taking, physical examination and laboratory investigation. Included are an assessment of the most suitable drugs for first-line treatment and guidelines for developing management plans for mild hypertension, moderate and severe hypertension, resistant hypertension and hypertensive emergencies. In view of the need to assure that scarce resources are invested wisely, the report also discusses and compares the cost-effectiveness of different management strategies.

**Selected Topics in Breastfeeding** René Mauricio Barría. 2018-12-19 Breastfeeding is a cornerstone of child nutrition and the growth and development of children. In addition, it generates other multiple benefits for both child and mother. Consequently, it has been recognized as a strategy of promotion and protection of the main health for different countries across the world. However, despite the strong evidence of its benefits and the public health policies being implemented to promote breastfeeding, the prevalence of exclusive breastfeeding at the sixth month does not reach the recommendations of many countries. This book intends to provide the reader with an overview of selected topics on current state-of-the-art breastfeeding in different situations and conditions. Specialists in the field of breastfeeding from different countries have developed these chapters and through them they share part of their experience.

*Sourcebook of Social Support and Personality* Gregory R. Pierce, Brian Lakey, I.G. Sarason. 2013-11-11 The work of 47 contributors from the U.S., Canada, and Israel, the Sourcebook gives special attention to the complexity of the social support construct, expanding the field's theoretical base by seriously reappraising social support research in the context of findings from other fields of psychology and related disciplines. Personality processes are specified to account for observed associations between social support and physical well-being. Several new studies are included which illustrate empirical approaches to exploring these processes. And key contributions highlight the great strides made in understanding the links among personal dispositions, situational contexts, and potentially supportive transactions.

*Women and Work in Indonesia* Michele Ford, Lyn Parker. 2008-02-19 This book examines the meaning of work for women in contemporary Indonesia. It takes a broad definition of work in order to interrogate assumptions about work and economic activity, focusing on what women themselves see as their work, which includes not only paid employment, home life and child care, but also activities surrounding ritual, healing and religious life. It analyses the key issues, including the contrasts between 'new' and 'old' forms of work, the relationship between experiences of migration and work, and the ways in which religion - especially Islam - shapes perceptions and practice of work. It discusses women's work in a range of different settings, both rural and urban, and in different locations, covering Sumatra, Bali, Lombok, Java, Sulawesi and Kalimantan. A wide range of types of employment are considered: agricultural labour, industrial work and new forms of work in the tertiary sector such as media and tourism, demonstrating how capitalism, globalization and local culture together produce gendered patterns of work with particular statuses and identities. It addresses the question of the meaning and valuing of women's 'traditional' work, be it agricultural labour, domestic work or other kinds of reproductive labour, challenging assumptions of women as 'only' mothers and housewives, and demonstrating how women can negotiate new definitions of 'housewife' by mobilizing kinship and village relations to transcend conventional categories such as wage labour and the domestic sphere. Overall, this book is an important study of the meaning of work for women in Indonesia.

*Translation and Tourism* M. Zain Sulaiman, Rita Wilson. 2019-03-05 This book addresses one of the most central, yet criticised, solutions for international tourism promotion, namely translation. It brings together theory and practice, explores the various challenges involved in translating tourism promotional materials (TPMs), and puts forward a sustainable solution capable of achieving maximum impact in the industry and society. The solution, in the form of a Cultural-Conceptual Translation (CCT) model, identifies effective translation strategies and offers a platform for making TPM translation more streamlined, efficient and easily communicated. Using the English-Malay language combination as a case study, the book analyses tourism discourse and includes a road test of the CCT model on actual end-users of TPMs as well as tourism marketers in the industry. Guidelines for best practices in the industry round out the book, which offers valuable insights not only for researchers but also, and more importantly, various stakeholders in the translation, tourism and advertising industries.

**Abortion Pills, Test Tube Babies, and Sex Toys** L. L. Wynn, Angel M. Foster. 2017-07-25 From Viagra to in vitro fertilization, new technologies are

rapidly changing the global face of reproductive health. They are far from neutral: religious, cultural, social, and legal contexts condition their global transfer. The way a society interprets and adopts (or rejects) a new technology reveals a great deal about the relationship between bodies and the body politic. Reproductive health technologies are often particularly controversial because of their potential to reconfigure kinship relationships, sexual mores, gender roles, and the way life is conceptualized. This collection of original ethnographic research spans the region from Morocco and Tunisia to Israel and Iran and covers a wide range of technologies, including emergency contraception, medication abortion, gamete donation, hymenoplasty, erectile dysfunction, and gender transformation. **Improving Palliative Care for Cancer** National Research Council, Institute of Medicine, National Cancer Policy Board. 2001-10-19 In our society's aggressive pursuit of cures for cancer, we have neglected symptom control and comfort care. Less than one percent of the National Cancer Institute's budget is spent on any aspect of palliative care research or education, despite the half million people who die of cancer each year and the larger number living with cancer and its symptoms. *Improving Palliative Care for Cancer* examines the barriers—scientific, policy, and social—that keep those in need from getting good palliative care. It goes on to recommend public- and private-sector actions that would lead to the development of more effective palliative interventions; better information about currently used interventions; and greater knowledge about, and access to, palliative care for all those with cancer who would benefit from it.
