Sebastian Dreaming Georg Trakl.2016 Sebastian Dreaming comprises the second book in James Reidel's Our Trakl series. Published posthumously in the original German in 1915, this is the second and last collection prepared by Trakl himself. Indeed, the Austrian poet may have tied his own fate to it. During his last days in a military hospital, Trakl had politely requested proofs of Sebastian Dreaming from his publisher and waited a week before overdosing on cocaine. He had been told once before that the war, which drove him into madness, had indefinitely postponed his masterpiece. Now the wait is over for Trakl's book to appear separately and in English. Until now translations of the poems from this collection have appeared in selections and complete volumes. Reidel has chosen to present the book individually, as Trakl wanted his book experienced. To achieve this, a certain verisimilitude in these English renderings has been achieved--even omitting the German facing texts is at work here--for which the translator has gone to great lengths, with an eye for seeing Trakl in his time and place, not only as an early modern poet but one whose strange and intriguing language and setting came from another century and still haunt us in ours.

Four Theories of the Press Fred Siebert, Theodore Peterson, Wilbur Schramm. 1963-10-01 Presented here are four major theories behind the functioning of the world's presses: (1) the Authoritarian theory, which developed in the late Renaissance and was based on the idea that truth is the product of a few wise men; (2) the Libertarian theory, which arose from the works of men like Milton, Locke, Mill, and Jefferson and avowed that the search for truth is one of man's natural rights; (3) the Social Responsibility theory of the modern day: equal radio and television time for political candidates, the obligations of the newspaper in a one-paper town, etc.; (4) the Soviet Communist theory, an expanded and more positive version of the old Authoritarian theory.

Looking for the Possible Dance A.L. Kennedy.2010-11-30 Mary Margaret Hamilton was educated in Scotland. She was born there too. These may not have been the best possible options, but they were the only ones on offer at the time. Although her father did his best, her knowledge of life is perhaps a little incomplete. Margaret knows the best way to look at the moon, how to wake on time and how to breathe fire. Now she must learn how to live. A. L. Kennedy's absorbing, moving and gently political first novel dissects the intricate difficulties of human relationships, from Margaret's passionate attachment to her father and her more problematic involvement with Colin, her lover, to the wider social relations between pupil and teacher, employer and employee, individual and state.

Design of a Computer Controlled Manipulator Victor David Scheinman.1969 The report covers the preliminary system studies, the design process, and the design details associated with the design of a new computer controlled manipulator. A systems study of various manipulator configurations, force sensing methods, and suitable components and hardware was first performed. Based on this study, a general design concept was formulated. This concept was then developed into a detailed manipulator design, having six degrees of freedom, all electric motor powered. The manipulator has exceptionally high position accuracy, comparatively fast feedback servo performance, and approximately human arm reach and motion properties. Supporting some of the design details and selections are several examples of the design calculation procedure employed. (Author).

Lonely Planet's Global Beer Tour Lonely Planet Food.2017-05-01 Explore the vibrant world of craft beer with Lonely Planet Global Beer Tour. We've selected some of the finest tap rooms, bars and

breweries that thirsty travellers can visit in 30 countries around the world. Discover how to find them, which beers to sample, and learn about local places of interest with our recommended itineraries. Each country is introduced by a beer expert and includes regional beverages that shouldn't be missed. There's a world of great beer to taste - go and discover it! So why go beer touring, especially when it's easy and cheap to find interesting craft beers in your local shop? Firstly, craft beer doesn't travel too well and is affected by changes in temperature and long distances. And secondly, due to the explosion in small-scale breweries, many great beers aren't distributed outside their city or region. Beer often tastes better the closer it is to home, especially if that's straight from a tap in the actual brewery. The craft beer revolution has seen waves of breweries open up to the public, not just in the United States, the UK and Australia, where the trend is well established, but all over the world. Visit European beer capitals like Belgium, Italy and Germany, and sample local favourites in Canada, Australia and New Zealand. In Asia, explore hotspots in Japan, Vietnam and China, then venture to South America, Africa and the Middle East. Each brewery is accompanied by a selection of sightseeing ideas and activities, from local museums and galleries, to great hikes or bike rides. The book also features fun sections on beer trails, hangover cures and the world's wildest beers. There's also practical advice like how to ask for a beer in the local language and the ideal snacks to accompany your drink.

Hypertext and Cognition Jean-Francois Rouet,Jarmo J. Levonen,Andrew Dillon,Rand J.

Spiro.2012-11-12 The recent evolution of western societies has been characterized by an increasing emphasis on information and communication. As the amount of available information increases, however, the user -- worker, student, citizen -- faces a new problem: selecting and accessing relevant information. More than ever it is crucial to find efficient ways for users to interact with information systems in a way that prevents them from being overwhelmed or simply missing their targets. As a result, hypertext systems have been developed as a means of facilitating the interactions between readers and text. In hypertext, information is organized as a network in which nodes are text chunks (e.g., lists of items, paragraphs, pages) and links are relationships between the nodes (e.g., semantic associations, expansions, definitions, examples -- virtually any kind of relation that can be imagined between two text passages). Unfortunately, the many ways in which these hypertext interfaces can be designed has caused a complexity that extends far beyond the processing abilities of regular users. Therefore, it has become widely recognized that a more rational approach based on a thorough analysis of information users' needs, capacities, capabilities, and skills is needed. This volume seeks to meet that need. From a user-centered perspective -- between systems and users -- this volume presents theoretical and empirical research on the cognitive processes involved in using hypertext. In so doing, it illustrates three main approaches to the design of hypertext systems: *cognitive, which examines how users process multilayered hypertext structures; *ergonomical, which explores how users interact with the design characteristics of hardware and software; and *educational, which studies the learning objectives, frequency and duration of hypertext sessions,

type of reading activity, and the user's learning characteristics. This volume also tries to provide answers for the questions that have plagued hypertext research: *What is hypertext good for? *Who is hypertext good for? *If it is useful for learning and instruction, then what type? *What particular cognitive skills are needed to interact successfully with a hypertext system? Anyone interested in the fields of computer science, linguistics, psychology, education, and graphic design will find this volume intriguing, informative, and a definitive starting point for future research in the field of hypertext.

Mechatronic Systems Design Klaus Janschek.2011-09-18 In this textbook, fundamental methods for model-based design of mechatronic systems are presented in a systematic, comprehensive form. The method framework presented here comprises domain-neutral methods for modeling and performance analysis: multi-domain modeling (energy/port/signal-based), simulation (ODE/DAE/hybrid systems), robust control methods, stochastic dynamic analysis, and quantitative evaluation of designs using system budgets. The model framework is composed of analytical dynamic models for important physical and technical domains of realization of mechatronic functions, such as multibody dynamics, digital information processing and electromechanical transducers. Building on the modeling concept of a technology-independent generic mechatronic transducer, concrete formulations for electrostatic, piezoelectric, electromagnetic, and electrodynamic transducers are presented. More than 50 fully worked out design examples clearly illustrate these methods and concepts and enable independent study of the material.

Play as Symbol of the World Eugen Fink.2016-06-06 Eugen Fink is considered one of the clearest interpreters of phenomenology and was the preferred conversational partner of Edmund Husserl and Martin Heidegger. In *Play as Symbol of the World*, Fink offers an original phenomenology of play as he attempts to understand the world through the experience of play. He affirms the philosophical significance of play, why it is more than idle amusement, and reflects on the movement from child's play to cosmic play. Well-known for its nontechnical, literary style, this skillful translation by Ian Alexander Moore and Christopher Turner invites engagement with Fink's philosophy of play and related writings on sports, festivals, and ancient cult practices.

New Studies in Multimodality Ognyan Seizov, Janina Wildfeuer. 2019-01-24 Multimodality is one of the most popular and influential semiotic theories for analysing media. However, the application and conceptual anchoring of multimodality often remains geographically and disciplinarily grounded within local systems of thought. New Studies in Multimodality combines the expertise of multimodalists from around the globe, offering novel readings and applications of central concepts in multimodality and inviting innovative synergies between previously disparate schools. Combining perspectives from the most actively developing traditions of theory and research, this book progresses from classic concepts to more empirically and practice-motivated contributions. Contributors engage in mutual dialogue to present new theoretical perspectives and compelling applications to a variety of old and new media. Expanding the basis and scope of multimodality, this volume shows awareness and experience of this field in many disciplines and illustrates how versatile, pervasive and relevant it is for studying today's communication phenomena.

Functional Programming in PHP Simon Holywell. 2014-04-01 Many programming languages have embraced Functional Programming paradigms to augment the tools available. It also facilitates

writing code that is easier to understand, easier to test, and able to take advantage of parallelization. PHP introduced anonymous function and closures in 5.3, providing a more succinct way to tackle common problems. However, making the leap from the more common imperative style requires understanding how and when to best use lambdas, closures, recursion, and more.

Functional Programming will show you how to leverage these new language features by understanding functional programming principles. Plenty of examples are provided to illustrate each concept as it's introduced and to show how to implement it with PHP. You'll learn how to use map/reduce, currying, composition, and more. You'll see what external libraries are available and new language features are proposed to extend PHP's functional programming capabilities.

Building Critique Gabu Heindl, Michael Klein, Ana Jeinic, Christina Linortner. 2019-05 For much of the 20th century, critique played an important part in what was considered modern architecture; the canon of modern architecture considered itself dedicated to both formal progress and social critique. But as the 1960s spurred a rereading of modern architecture from a perspective informed by Marxism and the decade's new social movements, many concluded that a building practice could not be critical, owing to its interdependent relationship with power and business. With recent economic crises hitting the building and property sectors, and research playing an increasingly large role in architectural practice, we are witnessing a renewed interest in critique in contemporary architecture, especially from postcolonial and feminist positions. The essays contained in this book, authored by a variety of international architects and thinkers, address this revived moment of critique, arguing that, far from being dead, architectural critique is now indispensable.
