Catalogue of Geadephaga (Coleoptera, Adephaga) of

America, north of Mexico Yves Bousquet.2012-11-28

This publication provides a comprehensive review of the nomenclature and distribution of the Geadephaga of America, north of Mexico. Overall 2439 valid species-group taxa in 208 genera are catalogued along with their synonyms. Besides the usual information pertaining to author(s), date and page of publication, the type locality, location of name-bearing type, first reference establishing each synonym, and etymology for many patronymic names are provided for species-group names. Genus-group names are listed with the author(s), year of publication, page citation, type species with manner of fixation and etymology for most. The geographical distributions of all species-group taxa are briefly summarized and their state and province records are indicated. About 2500 references are listed with publication dates for many in order to assess priority of names. Several new nomenclatural acts are introduced including one new genus-group taxon, one new replacement name, three changes in precedence, five new genus-group synonymies, 65 new species-group synonymies, one new species-group status, and 12 new combinations. The work includes also a discussion of the notable private North American carabid collections, a synopsis of all extant world geadephagan tribes and subfamilies, a brief faunistic assessment of the fauna, a list of North American fossil Geadephaga, a list of North American Geadephaga larvae described or illustrated, a list of species described from specimens mislabeled as from North America, and a list of unavailable names listed from North

America.

Le Regne Animal Distribue D'Apres Son Organisation - Volume 3 Georges Cuvier.2012-11-13 Published in 1817, this influential four-volume work was the first to integrate geology, palaeontology, zoology and comparative anatomy.

Les insectes et les arachnides Glénat.2007 Partez à la découverte du monde méconnu des insectes, ces petits invertébrés qui représentent pourtant 80% des espèces animales ! Ces minuscules animaux appartiennent à un monde discret, malgré leurs formes et leurs couleurs souvent surprenantes. Cet ouvrage vous donnera une multitude d'informations sur la vie et le comportement des insectes : ainsi, l'abeille mellifère, lorsqu'elle vole au-dessus d'une source de nectar, communique sa découverte par un numéro de danse ; le lucane doit son nom de cerf-volant à ses gigantesques mandibules évoquant les bois d'un cerf ; le petit paon de nuit, ne pouvant se nourrir, est condamné à mourir de faim ; les fourmis esclavagistes lancent des raids meurtriers pour voler de jeunes nymphes ; la luciole, dont le système d'éclairage, produisant une lumière froide, est absolument extraordinaire. Cet atlas nature présente les principales espèces, parmi les plus courantes, vous aurez ainsi tous les atouts en main pour devenir un apprenti entomologiste !
