

Geriatric Emergent Urgent And Ambulatory Care The

Principles and Practices of Geriatric Emergency Medicine

James Wilson.2017-05-09 This book provides a comprehensive, practical framework for community and academic emergency medicine practitioners, as well as emergency department administrators striving to improve delivery of care to this vulnerable, growing population. This book focuses on the unique pathophysiology of the elderly, presenting guidelines for resuscitation, evaluation and management. The first section discusses general principles including demographics, pharmacology and pain management. The following sections cover high-risk chief presenting complaints and review geriatric emergencies. Finally, topics of particular relevance in the geriatric population are discussed, including functional assessment, end-of-life care, financial considerations and abuse.

Geriatric Emergency Medicine Christian Nickel, Abdelouahab Bellou, Simon Conroy.2017-12-11 This book discusses all important aspects of emergency medicine in older people, identifying the particular care needs of this population, which all too often remain unmet. The up-to-date and in-depth coverage will assist emergency physicians in identifying patients at risk for adverse outcomes, in conducting appropriate assessment, and in providing timely and adequate care. Particular attention is paid to the common pitfalls in emergency management and means of avoiding them. Between 1980 and 2013, the number of older patients in emergency departments worldwide doubled. Compared with younger patients, older people suffer from more comorbidities, a higher mortality rate, require more complex assessment and diagnostic testing, and tend to stay longer in the

emergency department. This book, written by internationally recognized experts in emergency medicine and geriatrics, not only presents the state of the art in the care of this population but also underlines the increasing need for adequate training and development in the field.

Geriatric Emergencies Iona Murdoch, Sarah Turpin, Bree Johnston, Alasdair MacLulich, Eve Losman. 2015-02-23 *Geriatric Emergencies* is a practical guide to the common conditions affecting older patients who present in an emergency to hospital or primary care. Beginning with the essentials of history taking and clinical examination, the book covers a comprehensive range of emergencies, emphasizing the different management approaches which may be required in older patients. Common geriatric presentations such as falls, delirium and stroke, are explored in detail in addition to more diverse topics such as abdominal pain, major trauma and head injury. Ethical considerations such as advanced care planning, palliative care and capacity assessment are discussed with practical tips on communicating with patients and their relatives. *Geriatric Emergencies* provides concise up-to-date guidance to the emergency management of the older patient. It is a recommended resource for all health professionals working in the acute environment, in which a large proportion of patients are aged over 65.

Geriatrics for Specialists Andrew G. Lee, Jane F. Potter, G. Michael Harper. 2021-08-31 This book aims to be a single point of reference for advances in the care of geriatric populations across medical and surgical specialties. The aging population is a unique demographic with its own health challenges. Geriatricians are specifically trained to address these challenges but few medical students or residents enter geriatrics, even as the demand for geriatric expertise increases. The practices of many medical and surgical specialists are dominated by older patients who may themselves see many specialists but rarely visit geriatricians. This updated edition elucidates the most common medical conditions seen in aging patients and translates approaches to those conditions for physicians across specialties. Divided into three sections that assemble crosscutting issues, medical specialties, and surgical and related specialties, this book serves as a guide for clinicians of all backgrounds who will work with older patients as the demographic ages further. This second edition of *Geriatrics for Specialists* expands the number of specialist chapters to reflect growth in research in aging and clinical care for older people in dermatology, plastic surgery, and behavioral neurology. All original chapters from the first edition are extensively revised and updated to reflect the rapid growth of new knowledge in the field.

This text was developed to help providers who evaluate low acuity complaints in any setting. The aim is to highlight common pitfalls in the management of those seemingly minor illnesses or injuries, which if not identified early or if managed incorrectly can have devastating and longterm consequences. This text will bring the provider's attention to high-risk aspects of chief complaints that may be encountered in a variety of low-acuity settings. Focused on high-risk pitfalls practitioners may encounter in everyday practice, each of the book's chapters is written by an expert chosen for his/her expertise in their respective topics. Advanced Geriatric Education for Emergency Medical Services Course Workbook National Association of Emergency Medical Technicians (U.S.).2017-04-21 Older adults remain the largest single consumer of health-care resources. For increasing numbers of older people in society, the emergency medical services practitioner is the only health-care worker, outside of the emergency department, who is immediately available to assist the older person in crisis 24 hours a day, 7 days a week. Advanced geriatric education for emergency medical services expands on the Geriatric education for emergency medical services core course, delving into more complex scenarios and addressing the unique devices that emergency medical services practitioners are likely to encounter when assessing, treating, and transporting older adults --Back cover.

Geriatric Emergencies Amal Mattu,Shamai Grossman,Peter Rosen,Robert Anderson,Christopher R. Carpenter,Andrew Chang,Jon Mark Hirshon,Ula Hwang,Maura Kennedy,Don Melady,Vaishal Tolia,Scott Wilbur.2016-07-12 The elderly

represent the fastest growing segment of the population in developed countries, reflected in the patient population presenting to EDs and hospitals. These patients more often than not have greater co-morbidities, more complicated workups and utilize more laboratory and radiologic services. This text is designed to teach emergency physicians how best to care for this specific demographic of patients. It addresses physiologic changes, high-risk conditions, and atypical presentations associated with elderly patients in the ED that result in frequent misdiagnosis or delays in diagnosis. It instructs the readers how best to care for elderly patients in order to minimize morbidity and mortality, addressing some of the difficult psychosocial issues that confront health care providers that care for elderly patients, such as psychiatric disease and end-of-life care. The utility of this text is not limited to emergency physicians, but it should be useful to all health care providers involved in the treatment of elderly patients with acute medical or surgical conditions.

Geriatric Emergencies Lee A. Lindquist, Scott M.

Dresden. 2019-05-15 Care for older adults in Emergency Departments (EDs) has historically been focused on acute medical conditions with little emphasis on geriatric-specific issues. In 2010, emergency departments (EDs) throughout the nation saw almost 130 million patients, 15% of whom were 65 or older. The number of older adults who visit an ED has doubled in the last decade and continues to grow rapidly. Older adults receiving care in an ED are highly likely to be admitted to the hospital, much more so than their younger counterparts. Preventing a hospital admission saves older adults from frequently encountered adverse events, including hospital-acquired delirium, functional status impairment, cognitive loss, and nursing home admission. It is unknown how many older adults are hospitalized for reasons other than acute medical illness, such as functional decline, polypharmacy, progressive dementia, caregiver stress, or unstable living situation. These non-emergent conditions are

rarely addressed during a typical ED visit due to lack of resources, significant patient volumes, and the need for rapid turnover of care spaces. The predominant management strategy of emergency physicians to handle these important but not imminently life-threatening geriatric issues is to recommend hospital admission. Northwestern has pioneered the Geriatric Emergency Department through the creation of the Geriatric Emergency Department Innovation model (GEDI), with goals to prevent admissions for older adults by assessing and meeting their geriatric-specific, non-acute care needs in the ED. The GEDI model at Northwestern centers on a multi-disciplinary curriculum composed of clinical, didactic, and practical arms developed by emergency medicine and geriatrics educational experts. In this title, we will present case studies of older adults seen in the Emergency Department through the GEDI model and discuss means of identifying/screening for, diagnosing, and treating geriatric syndromes seen in the emergent care of the older adult patient. In addition, there will be a set of concise “take-home points” for each case study that will be easy to commit to memory and implement in clinical care of older adults. As the number of seniors seeking emergent care will continue to increase, the ED setting must become responsive to geriatric-specific needs. This book will provide a variety of models detailing how to offer comprehensive, state-of-the-art, optimal care for managing the full range of geriatric syndromes that regularly present in the emergent care setting.

Geriatric Emergency Medicine Joseph H. Kahn, Brendan G. Magauran, Jr, Jonathan S. Olshaker. 2014-01-16 As the global geriatric population continues to grow, an increasing proportion of people reporting to emergency departments are elderly. The work-up of these patients uses more time and resources than that of younger patients, and is complicated by the fact that acute disease often presents more subtly, without the outward manifestations typically seen in younger patients. This volume focuses on the unique pathophysiology of the elderly, presenting guidelines for resuscitation, evaluation and management. The first section discusses general principles including demographics, pharmacology and pain management. The following sections cover high-risk chief presenting complaints and review geriatric emergencies. Finally, topics of particular relevance in the geriatric population are discussed, including functional assessment, end-of-life care, financial considerations and abuse. This book provides a comprehensive, practical framework for community and academic emergency medicine practitioners, as well as emergency department administrators striving to improve delivery of care to this vulnerable, growing population.

Geriatrics Models of Care Michael L. Malone, Elizabeth A. Capezuti, Robert M. Palmer. 2015-05-22 This book describes geriatrics practice models that are used to guide the care of older adults, allowing seniors to remain at home, prevent functional disability and preserve quality of life. The models include specific interventions which are performed by health care workers to address the needs of older persons and their caregivers. These models respect patient values, consider patient safety and appreciate psychosocial needs as well. Divided into six parts that discuss hospital-based models of care, transitions from hospital to home, outpatient-based models of care and emergency department models of care, this text addresses the needs of vulnerable patients and the community. Geriatric Models of Care is an excellent resource for health care leaders who must translate these programs to address the needs of the patients in their communities.

Geriatric Education for Emergency Medical Services (Gems) National Association of Emergency Medical Technicians

(Naemt).2023-02-07 According to the Centers for Disease Control and Prevention, Americans aged 65 and over comprise 15 percent of the population but account for nearly 40 percent of ambulance transports. This is not surprising given that older adults experience more chronic conditions, multiple diseases, and polypharmacy issues than the rest of the population. Yet despite EMS practitioners' experience in the field, research shows that geriatric trauma patients are often undertriaged to trauma centers. High-quality geriatric-specific education can make a difference. With the right text, EMS practitioners can gain a deeper understanding of how the body ages, how multiple medications can create or exacerbate emergencies, how certain communication techniques can improve assessments, and more. Armed with new knowledge, EMS professionals can learn how to give older patients in their community better emergency care and an improved quality of life. The third edition of Geriatric Education for Emergency Medical Services is authored by experts in the field, reviewed by the American Geriatrics Society (AGS), and endorsed by the National Association of Emergency Medical Technicians (NAEMT). Comprehensive and updated, the new edition addresses the National EMS Education Standards in 15 chapters--covering communication, assessment, trauma, respiratory and cardiovascular emergencies, medication toxicity, elder abuse, and much more. The third edition provides even greater value: - New guidance on how to conduct a comprehensive geriatric assessment - New education on how to correctly triage older patients and transport them to the appropriate level of care - New updates to medications and dosages throughout the book, updates to ILCOR guidelines, the inclusion of COVID-19 considerations, and more Unique in prehospital geriatric education, Geriatric Education for Emergency Medical Services engages EMS personnel in the complexities of geriatric care and prepares them with the updated guidance they need to successfully assess and care for

their older patients. Chapter 1 Aging Chapter 2 Changes with Age Chapter 3 Communication Chapter 4 Assessment of the Older Patient Chapter 5 Psychosocial Aspects of Aging Chapter 6 Death and Dying Chapter 7 Trauma Chapter 8 Respiratory Emergencies Chapter 9 Cardiovascular Emergencies Chapter 10 Neurological Emergencies Chapter 11 Other Medical Emergencies Chapter 12 Pharmacology and Medication Toxicity Chapter 13 Elder Abuse Chapter 14 Mobile Integrated Healthcare Chapter 15 Elderly in Disasters

These sections make this book a must-have for any center looking to improve its care of the elderly patient or just trying to be sure its care is already the best it can be.
