*The Goshawk* Robert Kenward.2010-01-30 A large and spectacular bird of prey, the Goshawk lives in boreal forests throughout the Northern hemisphere. The Goshawk is an authoritative yet highly readable monograph of the species. A powerful hunter of large birds and woodland mammals, it was persecuted for many years by game keepers to the point of extinction in the UK. However, escaped falconry birds led to the establishment of a new population in the 1960s, though the species remains rare and elusive - birders need a combination of hard work and a little luck to see this magnificent raptor. The Goshawk includes chapters on nomenclature, races and morphs, biometrics, nesting, incubation and chick-rearing, migration, feeding ecology, population dynamics, and conservation, punctuated throughout with illuminating tales from author Robert Kenward's extensive field research. The book is packed with illustrations, figures and maps, and contains a selection of the author's superb photographs of the birds. The product of almost 30 years work, this title is a classic Poyser monograph; birders will enjoy the fascinating insights into the biology of the bird, while academics will appreciate the book's comprehensive literature review.

**Manual of Small Animal Internal Medicine** Richard William Nelson,C. Guillermo Couto.1999 For small animal disease information at your fingertips, turn to MANUAL OF SMALL ANIMAL INTERNAL MEDICINE. This stand-alone quick reference covers major assessment, diagnostic, and treatment protocols for common diseases of dogs and cats. Like the parent text, SMALL ANIMAL INTERNAL MEDICINE, the manual logically presents common disorders by body system and has a distinctive approach that enables students and practitioners to make diagnoses based on clinical signs. Page cross-references to the parent text are provided for more detailed discussions, particularly of relevant anatomy, physiology and pathophysiology. It's a valuable tool no student or practitioner should be without. \* Focuses on key information related to assessment, diagnosis, and treatment of common medical conditions in dogs and cats. \* Includes over 200 tables with key information such as etiology, clinical signs, differential diagnosis, and treatment regimens. \* Provides end-of-section drug appendices to highlight common drugs used to treat diseases. \* Identifies helpful reading material in the bibliography at the end of book. \* Gives page cross-references to parent text to direct the reader to more detailed information on conditions and disorders. Spanish version also available, ISBN: 84-8174-461-1

Systems Reliability Engineering Amit Kumar,Mangey Ram.2021-05-10 Reliability is one of the fundamental criteria in engineering systems. Design and maintenance serve to support it throughout the systems life. As such, maintenance acts in parallel to production and can have a great impact on the availability and capacity of production and the quality of the products. The authors describe current and innovative methods useful to industry and society.

**Organic Computing - Technical Systems for Survival in the Real World** Christian Müller-Schloer,Sven Tomforde.2017-12-28 This book is a comprehensive introduction into Organic Computing (OC), presenting systematically the current state-of-the-art in OC. It starts with motivating examples of self-organising, self-adaptive and emergent systems, derives their common characteristics and explains the fundamental ideas for a formal characterisation of such systems. Special emphasis is given to a quantitative treatment of concepts like self-organisation, emergence, autonomy, robustness, and adaptivity. The book shows practical examples of architectures for OC systems and their applications in traffic control, grid computing, sensor networks, robotics, and smart camera systems. The extension of single OC systems into collective systems consisting of social agents based on concepts like trust and reputation is explained. OC makes heavy use of learning and optimisation technologies; a compact overview of these technologies and related approaches to self-organising systems is provided. So far, OC literature has been published with the researcher in mind. Although the existing books have tried to follow a didactical concept, they remain basically collections of scientific papers. A comprehensive and systematic account of the OC ideas, methods, and achievements in the form of a textbook which lends itself to the newcomer in this field has been missing so far. The targeted reader of this book is the master student in Computer Science, Computer Engineering or Electrical Engineering - or any other newcomer to the field of Organic Computing with some technical or Computer Science background. Readers can seek access to OC ideas from different perspectives: OC can be viewed (1) as a „philosophy“ of adaptive and self-organising - life-like - technical systems, (2) as an approach to a more quantitative and formal understanding of such systems, and finally (3) a construction method for the practitioner who wants to build such systems. In this book, we first try to convey to the reader a feeling of the special character of natural and technical self-organising and adaptive systems through a large number of illustrative examples. Then we discuss quantitative aspects of such forms of organisation, and finally we turn to methods of how to build such systems for practical applications.

**On the Portability of Applications in Platform as a Service** Stefan Kolb.2019 In recent years, the cloud hype has led to a multitude of different providers and offerings across the entire cloud market, from Infrastructure as a Service (IaaS) to Platform as a Service (PaaS) to Software as a Service (SaaS). Despite the high popularity, there are still a number of problems and deficiencies. In particular with PaaS, the advertised portability between different clouds is hampered by a heterogeneous, difficult to compare provider landscape, technological differences between providers, and the lack of common standards. Therefore, the selection of a suitable provider and a potential change between different providers may involve substantial (migration) costs. Thus, the thesis deals with the analysis and improvement of application portability in PaaS environments. In the course of this, obstacles over the typical life cycle of an application - from the selection of a suitable cloud provider, through the deployment of the application, to the operation of the application - are considered. As foundation for further investigations, an improved delimitation and conceptualization of PaaS through a categorization, the definition of a reference model, and the establishment of a knowledge database is presented. As it turns out, in particular the heterogeneous provider landscape in this area is an obstacle for the assessment and feasibility of application portability. To solve this problem, the thesis presents a decision support system for the selection and comparison of suitable cloud platforms. Based on the PaaS model, a heuristic is proposed which can identify potential partners by matching the technological software ecosystem of the providers with the requirements of an application or a user. With the help of this system, it is possible for a user to identify offerings that enable application portability. To validate the approach, a case study with a real-world application is conducted that is migrated to different cloud platforms. In this context, we also develop a suitable assessment framework for measuring migration efforts, which allows making the differences between compatible providers quantifiable. The application management interface of the providers is identified as a central effort factor of the migration. Despite the semantically identical use cases, different interfaces are used by the providers for the management of the application's life cycle. Finally, to reduce the effort in this area, the thesis presents a unified interface for application deployment and management. In summary, the work provides evidence of application portability problems in PaaS environments and presents a framework for early detection and avoidance. In addition, the results of the work contribute to a reduction of lock-in effects by proposing a suitable standard for management interfaces.

**The Essential Path** Neale Donald Walsch.2019-06-04 “Deep inside you know Who You Truly Are. We all do. It's not a question of discovering it, it's a question of claiming it. Being it. And that's actually easier done than said. We're all just one decision away from The Essential Path. It's a path that could change a world that deeply yearns for a new direction.” — Neale Donald Walsch, author, The Essential Path Our modern era is plagued by increasing alienation—we are seeing an “us against them” world. Everywhere we turn, we find ourselves divided from each other as never before across political, economic, social, and spiritual lines. As

humanity is being torn apart right before our eyes—separating many of us from our friends and even our loved ones, from our hopes and dreams, from the natural world, and from so much that gives meaning and value to our lives—people are blaming everyone and everything around them for the collective problems that we have created ourselves. We are turning against each other, rather than to each other, just when we need each other the most. Bestselling author of *Conversations with God* Neale Donald Walsch offers a radical solution to the growing problem of humanity's alienation. He invites us to question our basic assumptions about ourselves, about each other, about life and how it works, and about God, and to rethink the very definition of humanity. The *Essential Path* challenges every human to make a Daring Decision—to look at who we are and how we can choose to be, in a planet-altering new way. With insight and spiritual perceptivity, Walsch peers into the heart of a broken, divided society, prompting us to ask the critical questions that have the power to transform our world.

*The Philosophy and Politics of Aesthetic Experience* Nathan Ross.2017-04-07 This book develops a philosophy of aesthetic experience through two socially significant philosophical movements: early German Romanticism and early critical theory. In examining the relationship between these two closely intertwined movements, we see that aesthetic experience is not merely a passive response to art—it is the capacity to cultivate true personal autonomy, and to critique the social and political context of our lives. Art is political for these thinkers, not only when it paints a picture of society, but even more when it makes us aware of our deeply ingrained forms of experience in a transformative way. Ultimately, the book argues that we have to think of art as a form of truth that is not reducible to communicative rationality or scientific knowledge, and from which philosophy and politics can learn valuable lessons.

*Against Nature* Lorraine Daston.2019-05-28 A pithy work of philosophical anthropology that explores why humans find moral orders in natural orders. Why have human beings, in many different cultures and epochs, looked to nature as a source of norms for human behavior? From ancient India and ancient Greece, medieval France and Enlightenment America, up to the latest controversies over gay marriage and cloning, natural orders have been enlisted to illustrate and buttress moral orders. Revolutionaries and reactionaries alike have appealed to nature to shore up their causes. No amount of philosophical argument or political critique deters the persistent and pervasive temptation to conflate the “is” of natural orders with the “ought” of moral orders. In this short, pithy work of philosophical anthropology, Lorraine Daston asks why we continually seek moral orders in natural orders, despite so much good counsel to the contrary. She outlines three specific forms of natural order in the Western philosophical tradition—specific natures, local natures, and universal natural laws—and describes how each of these three natural orders has been used to define and oppose a distinctive form of the unnatural. She argues that each of these forms of the unnatural triggers equally distinctive emotions: horror, terror, and wonder. Daston proposes that human reason practiced in human bodies should command the attention of philosophers, who have traditionally yearned for a transcendent reason, valid for all species, all epochs, even all planets.

**The Future of New Testament Textual Scholarship** Garrick V. Allen.2018-12 This volume fundamentally re-examines textual approaches to the New Testament and its manuscripts in the age of digital editing and media. Using the eccentric work of Herman Charles Hoskier as a shared foundation for analysis, contributors examine the intellectual history of New Testament textual scholarship and the production of critical editions, identify many avenues for further research, and discuss the methods and protocols for producing the most recent set of editions of the New Testament: the *Editio Critica Maior*. Contributors: Garrick V. Allen, J. K. Elliott, Gregory Peter Fewster, Peter J. Gurry, Juan Hernández Jr., H. A. G. Houghton, Annette Hüffmeier, Dirk Jongkind, Martin Karrer, Jennifer Wright Knust, Jan Krans, Thomas J. Kraus, Christina M. Kreinecker, Curt Niccum, D. C. Parker, Jacob Peterson, Stanley E. **Library Design for the 21st Century** Diane Koen, Traci Engel Lesneski.2018-12-03 Library design in the 21st century has one common theme: collaboration is at the heart of innovation. Designing modern libraries is a complex process involving many stakeholders and participants. Libraries of all types work with an almost limitless range of constituent groups for input, buy-in and successful implementation. Securing support for new library buildings and renovations of libraries engages many people: library clients, community members, faculty, funding agencies, donors, governing authorities, librarians, architects, interior designers and planners. Telling the right story and getting to the end game demand carefully crafted approaches, wide-ranging skills, a unified vision and productive teamwork. The IFLA Library Buildings and Equipment Section has selected the best papers presented by award-winning architects and international thought leaders from the academic and public library sector at our recent satellite conferences and seminars: *Collaborative Strategies for Successful Library Design* (Chicago, Illinois), *What comes after the Third Place?* (Columbus, Ohio); *Key Issues for Library Space: International Perspectives* (Maynooth, Ireland); *Storage, the final frontier* (Munich, Germany) and *Telling and selling the space story* (Wrocław, Poland). The stories by the library and design professionals within this publication illustrate how powerful a role partnerships, outreach and cooperation play in a library project's success.

*Organic Computing* Sven Tomforde, Bernhard Sick.2019-04-10 This book presents the results of the OC-DDC 2018. Successful participants have been invited to extend their abstracts submitted to the event towards a full book chapter by taking reviews and feedback received at the event in Würzburg into account. The participants prepared an initial extended abstract, helped to perform a sophisticated review process, and finally came up with interesting articles summarising their current work in the context of Organic Computing. Hence, the book also gives an overview of corresponding research activities in the field in Germany for the year 2018. The collection of contributions reflects the diversity of the different aspects of Organic Computing. In the following, we outline the contributions contained in this book.

Phylogenetic Relationships Among Gerrhonotine Lizards David A. Good.1988-01-01 In this study the author analyzes the phylogenetic relationships among the genera and species of alligator lizards (Squamata: Anguillidae: Gerrhonotinae). The subfamily consists of six monophyletic genera: Colopychon, Gerrhonotus, Elgaria, Barisia, Mesaspis, and Abronia. The author reviews the history of gerrhonotine taxonomy, provides a key to, and diagnoses of, all gerrhonotine taxa, and discusses taxonomic and biogeographic implications of gerrhonotine relationships.
