Command Of The Air General Giulio Douhet.2014-08-15 In the pantheon of air power spokesmen, Giulio Douhet holds center stage. His writings, more often cited than perhaps actually read, appear as excerpts and aphorisms in the writings of numerous other air power spokesmen, advocates-and critics. Though a highly controversial figure, the very controversy that surrounds him offers to us a testimonial of the value and depth of his work, and the need for airmen today to become familiar with his thought. The progressive development of air power to the point where, today, it is more correct to refer to aerospace power has not outdated the notions of Douhet in the slightest In fact, in many ways, the kinds of technological capabilities that we enjoy as a global air power provider attest to the breadth of his vision. Douhet, together with Hugh "Boom" Trenchard of Great Britain and William "Billy" Mitchell of the United States, is justly recognized as one of the three great spokesmen of the early air power era. This reprint is offered in the spirit of continuing the dialogue that Douhet himself so perceptively began with the first edition of this book, published in 1921. Readers may well find much that they disagree with in this book, but also much that is of enduring value. The vital necessity of Douhet's central vision-that command of the air is all important in modern warfare-has been proven throughout the history of wars in this century, from the fighting over the Somme to the air war over Kuwait and Iraq.

Strengthening Forensic Science in the United States National Research Council, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Policy and Global Affairs, Committee on Science, Technology, and Law, Committee on Identifying the Needs of the Forensic Sciences Community. 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform

and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Operation Shakespeare John Shiffman.2015-08-25 A Pulitzer Prize finalist presents the rare and intimate narrative of a daring national security sting designed to protect US soldiers, sailors, and pilots from the greatest danger they face on the battlefield--an enemy equipped with American-made weapons and technology. In Operation Shakespeare, investigative journalist John Shiffman traces an audacious and high-risk undercover operation--from Philadelphia to Shiraz to London to Beverly Hills to Tbilisi and Dubai. The sting is launched by an elite undercover Homeland Security unit created to stop the Iranians, Russians, Chinese, Pakistanis, and North Koreans from acquiring sophisticated American-made electronics capable of guiding missiles, jamming radar, and triggering countless weapons--from wireless IEDs to nuclear bombs. The US agents must outwit not only enemy brokers, but American manufacturers and global bankers too willing to put profit over national security. The three-year sting in Operation Shakespeare climaxes when the US agents lure the Iranian broker to a former Soviet republic with the promise of American-made radar, fighter-jet and missile components, then secretly drag him back to the United States, where he is held in secret for

two years. The laptop the Iranian carries into the sting provides the CIA with a treasure trove, a virtual roadmap to Tehran's clandestine effort to obtain US military technology. Tenacious, richly detailed, broad in scope, and emotionally powerful--and boasting unprecedented access to the government agents fighting this shadow war, as well as the captured Iranian arms broker--Operation Shakespeare is a fast-paced and masterful account of the covert effort to preserve American military supremacy, and to protect US troops--

Regions and Powers Barry Buzan, Ole Wæver. 2003-12-04 This book develops the idea that since decolonisation, regional patterns of security have become more prominent in international politics. The authors combine an operational theory of regional security with an empirical application across the whole of the international system. Individual chapters cover Africa, the Balkans, CIS Europe,

East Asia, EU Europe, the Middle East, North America, South America, and South Asia. The main focus is on the post-Cold War period, but the history of each regional security complex is traced back to its beginnings. By relating the regional dynamics of security to current debates about the global power structure, the authors unfold a distinctive interpretation of post-Cold War international security, avoiding both the extreme oversimplifications of the unipolar view, and the extreme deterritorialisations of many globalist visions of a new world disorder. Their framework brings out the radical diversity of security dynamics in different parts of the world.

Elements of Causal Inference Jonas Peters,Dominik Janzing,Bernhard Scholkopf.2017-11-29 A concise and self-contained introduction to causal inference, increasingly important in data science and machine learning. The mathematization of causality is a relatively recent development, and has

become increasingly important in data science and machine learning. This book offers a self-contained and concise introduction to causal models and how to learn them from data. After explaining the need for causal models and discussing some of the principles underlying causal inference, the book teaches readers how to use causal models: how to compute intervention distributions, how to infer causal models from observational and interventional data, and how causal ideas could be exploited for classical machine learning problems. All of these topics are discussed first in terms of two variables and then in the more general multivariate case. The bivariate case turns out to be a particularly hard problem for causal learning because there are no conditional independences as used by classical methods for solving multivariate cases. The authors consider analyzing statistical asymmetries between cause and effect to be highly instructive, and they report on their decade of intensive research into this problem. The book is accessible to readers with a background in machine learning or statistics, and can be used in graduate courses or as a reference for researchers. The text includes code snippets that can be copied and pasted, exercises, and an appendix with a summary of the most important technical concepts.

Handbook of Contact Mechanics Valentin L. Popov, Markus Heß, Emanuel Willert. 2019-04-26 This open access book contains a structured collection of the complete solutions of all essential axisymmetric contact problems. Based on a systematic distinction regarding the type of contact, the regime of friction and the contact geometry, a multitude of technically relevant contact problems from mechanical engineering, the automotive industry and medical engineering are discussed. In addition to contact problems between isotropic elastic and viscoelastic media, contact problems between transversal-isotropic elastic materials and functionally graded materials are addressed, too.

The optimization of the latter is a focus of current research especially in the fields of actuator technology and biomechanics. The book takes into account adhesive effects which allow access to contact-mechanical questions about micro- and nano-electromechanical systems. Solutions of the contact problems include both the relationships between the macroscopic force, displacement and contact length, as well as the stress and displacement fields at the surface and, if appropriate, within the half-space medium. Solutions are always obtained with the simplest available method - usually with the method of dimensionality reduction (MDR) or approaches which use the solution of the non-adhesive normal contact problem to solve the respective contact problem.

Spearhead of Logistics Benjamin King, Richard C. Biggs. 2016-02-25 *Spearhead of Logistics* is a

narrative branch history of the U.S. Army's Transportation Corps, first published in 1994 for transportation personnel and reprinted in 2001 for the larger Army community. The Quartermaster Department coordinated transportation support for the Army until World War I revealed the need for a dedicated corps of specialists. The newly established Transportation Corps, however, lasted for only a few years. Its significant utility for coordinating military transportation became again transparent during World War II, and it was resurrected in mid-1942 to meet the unparalleled logistical demands of fighting in distant theaters. Finally becoming a permanent branch in 1950, the Transportation Corps continued to demonstrate its capability of rapidly supporting U.S. Army operations in global theaters over the next fifty years. With useful lessons of high-quality support that validate the necessity of adequate transportation in a viable national defense posture, it is an important resource for those now involved in military transportation and movement for ongoing expeditionary operations. This text should be useful to both officers and noncommissioned officers who can take examples from the past and apply the successful principles to future operations, thus ensuring a continuing legacy of Transportation excellence within Army operations. Additionally, military science students and military historians may be interested in this volume.

Killing Strangers T. K. Wilson. 2020-09-02 A bewildering feature of so much contemporary political violence is its stunning impersonality. Every major city centre becomes a potential shooting gallery; and every metro system a potential bomb alley. Victims just happen, as the saying goes, to 'be in the wrong place at the wrong time'. We accept this contemporary reality - at least to some degree. But we rarely ask: where has it come from historically? *Killing Strangers* tackles this question head on. It examines how such violence became 'unchained' from inter-personal relationships. It traces the rise of such impersonal violence by examining violence in conjunction with changing social and political realities. In particular, it traces both 'push' and 'pull' - the ability of modern states to force the violence of their challengers into niche forms: and the disturbing new opportunities that technological changes offer to cause mayhem in fresh and original ways. *Killing Strangers* therefore aims to highlight the very strangeness of contemporary experience when it is viewed against a long-term perspective. Atrocities regularly capture media attention - and just as quickly fade from public view. That is both tragic - and utterly predictable. Deep down we expect no different. And that is why such atrocities must be repeated if our attention is to be re-engaged. Deep down we expect

that, too. So *Killing Strangers* deliberately asks the very simplest of questions. How on earth did we get here?
