Seveneves Neal Stephenson.2015-05-19 From the #1 New York Times bestselling author of *Anthem*, *Reamde*, and *Cryptonomicon* comes an exciting and thought-provoking science fiction epic—a grand story of annihilation and survival spanning five thousand years. What would happen if the world were ending? A catastrophic event renders the earth a ticking time bomb. In a feverish race against the inevitable, nations around the globe band together to devise an ambitious plan to ensure the survival of humanity far beyond our atmosphere, in outer space. But the complexities and unpredictability of human nature coupled with unforeseen challenges and dangers threaten the intrepid pioneers, until only a handful of survivors remain . . . Five thousand years later, their progeny—seven distinct races now three billion strong—embark on yet another audacious journey into the unknown . . . to an alien world utterly transformed by cataclysm and time: Earth. A writer of dazzling genius and imaginative vision, Neal Stephenson combines science, philosophy, technology, psychology, and literature in a magnificent work of speculative fiction that offers a portrait of a future that is both extraordinary and eerily recognizable. As he did in *Anthem*, *Cryptonomicon*, the *Baroque Cycle*, and *Reamde*, Stephenson explores some of our biggest ideas and perplexing challenges in a breathtaking saga that is daring, engrossing, and altogether brilliant.

Transdisciplinary Engineering for Complex Socio-technical Systems - Real-life Applications J. Pokojski,M. Gil,L. Newnes.2020-10-20 Transdisciplinary engineering transcends other inter- and multi-disciplinary ways of working, such as Concurrent Engineering (CE). In particular, transdisciplinary processes are aimed at solving complex, ill-defined problems, or problems for which the solution is not immediately obvious. No one discipline or single person can provide sufficient knowledge to solve such problems, so collaboration is essential. This book presents the proceedings of the 27th ISTE International Conference on Transdisciplinary Engineering, organized by Warsaw University of Technology, Poland, from 1-10 July 2020. ISTE2020 was the first of this conference series to be held virtually, due to the COVID-19 restrictions. Entitled *Transdisciplinary Engineering for Complex Socio-technical Systems - Real-life Applications*, the book includes 71 peer-reviewed papers presented at the conference by authors from 17 countries. These range from theoretical and conceptual to strongly pragmatic and addressing industrial best practice and, together with invited talks, they have been collated into 9 sections: Transdisciplinary Engineering (7 papers); Transdisciplinary Engineering Education (4 papers); Industry 4.0, Methods and Tools (7 papers); Human-centered Design (8 papers); Methods and Tools for Design and Production (14 papers); Product and Process Development (9 papers); Knowledge and Data Modeling (13 papers); Business Process and Supply Chain Management (7 papers); and Sustainability (2 papers). The book provides an overview of new approaches, methods, tools and their applications, as well as current research and development, and will be of interest to researchers, design practitioners, and educators working in the field.

Madame Blavatsky Marion Meade.2014-04-01 The life and times of Helena Blavatsky, the controversial religious guru who cofounded the Theosophical Society and kick-started the New Age movement. Recklessly brilliant, Helena Petrovna Blavatsky scandalized her 19th century world with a controversial new religion that tried to synthesize Eastern and Western philosophies. If her contemporaries saw her as a freak, a charlatan, and a snake oil salesman, she viewed herself as a special person born for great things. She firmly believed that it was her destiny to enlighten the world. Rebelliously breaking conventions, she was the antithesis of a pious religious leader. She cursed, smoked, overate, and needed to airbrush out certain inconvenient facts, like husbands, lovers, and a child. Marion Meade digs deep into Madame Blavatsky's life from her birth in Russia among the aristocracy to a penniless exile in Europe, across the Atlantic to New York where she became the first Russian woman naturalized as an American citizen, and finally moving on to India where she established the international headquarters of the Theosophical Society in 1882. As she chased from continent to continent, she left in her aftermath a trail of enthralled followers and the ideas of Theosophy that endure to this day. While dismissed as a female messiah, her efforts laid the groundwork for the New Age movement, which sought to reconcile Eastern traditions with Western occultism. Her teachings entered the mainstream by creating new respect for the cultures and religions of the East—for Buddhism and Hinduism—and interest in meditation, yoga, gurus, and reincarnation. Madame Blavatsky was one of a kind. Here is her richly bizarre story told with compassion, insight, and an attempt to plumb the truth behind those astonishing accomplishments.

Architecturally Exposed Structural Steel Terri Meyer Boake.2015-02-17 This book provides the means for a better control and purposeful consideration of the design of Architecturally Exposed Structural Steel (AESS). It deploys a detailed categorization of AESS and its uses according to design context, building typology and visual exposure. In a rare combination, this approach makes high quality benchmarks compatible with economies in terms of material use, fabrication methods, workforce and cost. Building with exposed steel has become more and more popular worldwide, also as advances in fire safety technology have permitted its use for building tasks under stringent fire regulations. On her background of long standing as a teacher in architectural steel design affiliated with many institutions, the author ranks among the world's best scholars on this topic. Among the fields covered by the extensive approach of this book are the characteristics of the various categories of AESS, the interrelatedness of design, fabrication and erection of the steel structures, issues of coating and protection (including corrosion and fire protection), special materials like weathering steel and stainless steel, the member choices and a connection design checklist. The description draws on many international examples from advanced contemporary architecture, all visited and photographed by the author, among which figure buildings like the Amgen Helix Bridge in Seattle, the Shard Observation Level in London, the New York Times Building and the Arganquela Footbridge.

Complex Steel Structures Terri Meyer Boake.2020-08-24 Complexity in architecture, construction and material manipulation is constantly increasing due to our present ability to design, calculate and fabricate an extending range of geometric shapes and systems. This volume addresses the design of complexity in the planning, fabrication and construction of steel structures based on non-orthogonal geometries: curved and chaotic geometries, poly-diagrid systems, lattice-grid structures and others. Topical photographs by the author on a wide range of international projects present innovative methods and techniques, providing an excellent understanding of the possibilities and requirements of complex steel structures.

Architecture Timed Karen A. Franck.2016-03-07 The traditional veneration of architecture for its monumental and enduring qualities seems to be changing. Architects and other designers are moving away from seeking permanence towards a more open, creative use of what time has to offer. This is revealed in new approaches to historic preservation, the proliferation of temporary structures, concerns regarding sustainability, and the employment of time-efficient processes. Architecture Timed explores the role of ideas about time in the design inclinations and choices of contemporary designers of the environment. Contributors consider how the new can be incorporated into the old; how designing for the very short term has significant advantages; how what is temporary can be re-used; and how the design of materials, buildings and landscapes can improve sustainability and enhance experiences of time passing. Many designers have replaced the ideal of 'timelessness' and the view of time as a series of singular, static moments with an enriched and more nuanced perspective, treating time as a source of inspiration to be embraced, not a condition to be defended against. Contributors include: Juhani Pallasmaa, Brian McGrath, Federica Goffi, Jill Stoner, Richard Garber and Eric Parry. Designers featured include: Agence Ter, Shigeru Ban, BanG Studio, Diller Scofidio + Renfro, EMF Landscape Architects, Gluck+, GRO Architects, Interboro Partners, Toyo Ito, Kengo Kuma, Enric Miralles, Eric Parry Architects, Carlo Scarpa, Taylor Cullity Lethlean, UNStudio and Peter Zumthor.

BIM Handbook Rafael Sacks, Kathleen Liston, Chuck Eastman, Paul Teicholz.2011-03-25 The BIM Handbook is an extensively researched and meticulously written book, showing evidence of years of work rather than something that has been quickly put together in the course of a few months. It brings together most of the current information about BIM, its history, as well as its potential future in one convenient place, and can serve as a handy reference book on BIM for anyone who is involved in the design, construction, and operation of buildings and needs to know about the technologies that support it. The need for such a book is indisputable, and it is terrific that Chuck Eastman and his team were able to step up to the plate and make it happen. Thanks to their efforts, anyone in the AEC industry looking for a deeper understanding of BIM now knows exactly where to look for it. Constructing the Future Ghassan Aouad, Angela Lee, Song Wu. 2006-12-05 This essential book introduces the concept of nD modelling, which takes the theory of computer modelling of the built environment to n dimensions. nD modelling utilizes a decision support tool for systematic assessment and comparison between various design parameters such as cost, accessibility, maintainability, sustainability, crime, energy, whole life costing, acoustics and scheduling among others. *Constructing the Future* is a comprehensive book which provides a global perspective on the concept of nD modelling and examines its impact on construction, from development to application. The text offers a critique of competing views that seek to justify (or ignore) the role of nD modelling in the future of construction as well as describing developments in this area which are already happening worldwide. Presenting a thorough critique of competing views as well as providing guidance on best practice, *Constructing the Future* is a bold, well-grounded and illustrated title introducing construction management professionals and researchers to this exciting new development in the quest for a single building and product model.

Diagrid Structures Terri Meyer Boake. 2014-01-23 Diagrids are load-bearing structures made of steel diagonal grids. They were first used in the great buildings of the turn of the millennium, such as the Swiss Re Tower in London ("The Gherkin") and the Hearst Magazine Tower in New York City. Diagrids owe their ensuing popularity not only to their stunning aesthetic value, but also to their very tangible benefits: lateral loading capacity, a massive saving of material, a significant gain in open, usable floor area, and increased flexibility. At its opening in 2014, the Leadenhall Building in London will be the first skyscraper without a bearing inner core—thanks to a diagrid structure. This book explains comprehensively for the first time all of the aspects involved in this new bearing structure. The author, experienced in teaching, research, and practice (recent publication: *Understanding Steel Design. An Architectural Design Manual*, 2011), has tracked the development of this technology from its beginnings and employs photographic documentation of the construction phases of many diagrid structures.
