For the Love of ACT Science Michael Cerro.2015-10-15 To really nail the Science section of the ACT standardized exam, you have to understand basic principles of science - experimentation, data collection, numerical and graphic data analysis, and how to develop conceptual conclusions. Who better to write the test prep book than an engineer who loves science? Michael Cerro uses his background as a chemical engineer, chess player, and highly-impactful ACT tutor with years of test prep experience to write a book that offers a new approach to ACT Test Prep rooted in: LOGIC. He brings together copious opportunities to practice with sample problems at each strategic lesson, using customized questions that feel just like the real test. Michael has an ability to create essential teaching moments on each page, as you walk through the book; and you may even have fun doing it!Above all, his love of the exam and of science ensure that anyone who uses this book - from teachers to tutors to students - will master the ACT Science section as well as gain a valuable understanding about the world of science that will be beneficial throughout life.

Quaker Writings Thomas D. Hamm.2011-01-25 An illuminating collection of work by members of the Religious Society of Friends. Covering nearly three centuries of religious development, this comprehensive anthology brings together writings from prominent Friends that illustrate the development of Quakerism, show the nature of Quaker spiritual life, discuss Quaker contributions to European and American civilization, and introduce the diverse community of Friends, some of whom are little remembered even among Quakers today. It gives a balanced overview of Quaker history, spanning the globe from its origins to missionary work, and explores daily life, beliefs, perspectives, movements within the community, and activism throughout the world. It is an exceptional contribution to contemporary understanding of religious thought. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. With more than 1,700 titles, Penguin Classics represents a global bookshelf of the best works throughout history and across genres and disciplines. Readers trust the series to provide authoritative texts enhanced by introductions and notes by distinguished scholars and contemporary authors, as well as up-to-date translations by award-winning translators.

Epic Iran John Curtis, Tim Stanley, Ina Sarikhani Sandmann.2021-02-02 A stunning introduction to the material culture of some of the great civilizations of Asia Iran was the home of some of the greatest civilizations of both the ancient and medieval worlds, but these achievements remain poorly known and largely misunderstood outside the country. Epic Iran tells the story of Iran from pre-Islamic through modern times and provides an opportunity to see pieces from key museum and private collections. This book combines the ancient and Islamic periods and continues the narrative into the contemporary world. It shows how civilized life emerged in Iran around 3,200 BC and how a distinctive Iranian identity formed 2,500 years ago has survived until today, expressed in the Persian language and in religious affiliations. Lavishly illustrated, some 250 images showcase pieces including goldwork, ceramics, glass, illustrated manuscripts, textiles, carpets, oil paintings, drawings, and photographs. Alongside the historical sweep are examples from contemporary artists and makers, demonstrating the rich antecedents still influencing some modern-day practitioners.

The Concise Oxford Dictionary of Mathematics Christopher Clapham, James Nicholson.2014-05-22 Authoritative and reliable, this A-Z provides jargon-free definitions for even the most technical mathematical terms. With over 3,000 entries ranging from Achilles paradox to zero matrix, it covers all commonly encountered terms and concepts from pure and applied mathematics and statistics, for example, linear algebra, optimisation, nonlinear equations, and differential equations. In addition, there are entries on major mathematicians and on topics of more general interest, such as fractals, game theory, and chaos. Using graphs, diagrams, and charts to render definitions as comprehensible as possible, entries are clear and accessible. Almost 200 new entries have been added to this edition, including terms such as arrow paradox, nested set, and symbolic logic. Useful appendices follow the A-Z dictionary and include lists of Nobel Prize winners and Fields' medallists, Greek letters, formulae, and tables of inequalities, moments of inertia, Roman numerals, a geometry summary, additional trigonometric values of special angles, and many more. This edition contains recommended web links, which are accessible and kept up to date via the Dictionary of Mathematics companion website. Fully revised and updated in line with curriculum and degree requirements, this dictionary is indispensable for students and teachers of mathematics, and for anyone encountering mathematics in the workplace.

Human Lifeworlds David Dunér, Göran Sonesson. 2016 This book, which presents a cognitive-semiotic theory of cultural evolution, including that taking place in historical time, analyses various cognitive-semiotic artefacts and abilities. It claims that what makes human beings human is fundamentally the semiotic and cultural skills by means of which they endow their Lifeworld with meaning. The properties that have made human beings special among animals living in the terrestrial biosphere do not derive entirely from their biological-genetic evolution, but also stem from their interaction with the environment, in its culturally interpreted form, the Lifeworld. This, in turn, becomes possible thanks to the human ability to learn from other thinking beings, and to transfer experiences, knowledge, meaning, and perspectives to new generations.
