An Introduction to Quantum Theory Keith

Hannabuss.1997-03-20 This book provides an introduction to quantum theory primarily for students of mathematics. Although the approach is mainly traditional the discussion exploits ideas of linear algebra, and points out some of the mathematical subtleties of the theory. Amongst the less traditional topics are Bell's inequalities, coherent and squeezed states, and introductions to group representation theory. Later chapters discuss relativistic wave equations and elementary particle symmetries from a group theoretical standpoint rather than the customary Lie algebraic approach. This book is intended for the later years of an undergraduate course or for graduates. It assumes a knowledge of basic linear algebra and elementary group theory, though for convenience these are also summarized in an appendix.

The Ethics of Archaeology Chris Scarre,Geoffrey

Scarre.2006-01-19 The question of ethics and their role in archaeology has stimulated one of the discipline's liveliest debates. In this collection of essays, first published in 2006, an

international team of archaeologists, anthropologists and philosophers explore the ethical issues archaeology needs to address. Marrying the skills and expertise of practitioners from different disciplines, the collection produces interesting insights into many of the ethical dilemmas facing archaeology today. Topics discussed include relations with indigenous peoples; the professional standards and responsibilities of researchers; the role of ethical codes; the notion of value in archaeology; concepts of stewardship and custodianship; the meaning and moral implications of 'heritage'; the question of who 'owns' the past or the interpretation of it; the trade in antiquities; the repatriation of skeletal material; and treatment of the dead. This important collection is essential reading for all those working in the field of archaeology, be they scholar or practitioner.

Victorian Soundscapes John M. Picker.2003-09-04 Far from the hushed restraint we associate with the Victorians, their world pulsed with sound. This book shows how, in more ways than one, Victorians were hearing things. John Picker draws upon literary and scientific works to recapture the Victorian sense of aural discovery.

Contested Pasts Katharine Hodgkin,Susannah

Radstone.2003-09-02 This inter-disciplinary volume demonstrates, from a range of perspectives, the complex cultural work and struggles over meaning that lie at the heart of what we call memory. In the last decade, a focus on memory in the human sciences has encouraged new approaches to the study of the past. As the humanities and social sciences have put into question their own claims to objectivity, authority and universality, memory has appeared to offer a way of engaging with knowledge of the past as inevitably partial, subjective and local. At the same time,

memory and memorial practices have become sites of contestation, and the politics of memory are increasingly prominent.

Publisher Description

Differential Europe Adrienne Windhoff-Héritier.2001 Heritier, Kerwer, Knill, Lehmkuhl (all with the Max Planck Project Group, Common Goods: Law, Politics, and Economics), Teutsch (European Union Department of the German Federal Ministry of Labour and Social Affairs), and Douillet (Ecole Normale Supérieure de Cachan) combine efforts in this study to develop a theoretical and conceptual framework for studying the impact of European policies on member states. The authors argue that the influence of EU policies on each member state depends on each state's preexisting policies and institutional capacity to change. The study focuses on transport policy, presenting case studies from Britain, France, Germany, Italy and the Netherlands to demonstrate differences in the impacts of EU policies. The text concludes with a comparison of the differences in responses of member states to identical European policy demands and similar external and internal conditions. c. Book News Inc.

Politics and Industrialization Colleen A. Dunlavy.1994 Dunlavy examines the rich political context of a seeming paradox: authoritarian, centralized Prussia adopted a largely hands-off policy toward the railroads, but the more liberal, fragmented American government sought vigorously both to promote and to regulate the new industry. By also fragmenting interests and technological choices, the American structure impeded the emergence of the railroad as a system, while the centralized Prussian structure facilitated it.

Steam, Steel & Stars Tim Hensley.1998 Ninety photographs with captions present the activities of the Norfolk and Western Railway, the last major railroad in America to use steam power. Most of the photographs were taken at night, and Thomas H. Garver's afterword includes description of Link's methods of flash photography.

A Shadow of War Claudia Theune.2017-08-30 This book presents archaeological research from places of war, violence, protest and oppression of the 20th and the 21st century; sites where the material relics give a deep insight to fateful events - a shadow of war. Alongside renewed interest in National Socialism and the Holocaust, archaeological interest started in former concentration camps of the Nazi dictatorship. The focus was on the central places of the camps, such as the gas chambers, the

crematoria, or execution sites, as well as prisoners' barracks and the parade ground. In many cases, these sites revealed forgotten and vanished structures, where archaeological excavations can offer the possibility for commemorating the victims. The research has since widened and includes other sites of Nazi dictatorship and the Second World War, as well as the First World War, the Cold War and locations of civil wars and civilian protest against state authorities and against companies and corporations in many parts of the world. In order to come to a comprehensive understanding contemporary archaeology must take a global perspective. Archaeological finds often shed light on daily life, revealing survival conditions in the internment camps; the lives of people and their fighting and dying on battlefields and in trenches. Likewise, the relics of politically active people in protest camps give an impression of their commitment in civilian protest. Sometimes material remains can help to tell an alternative or balancing narrative to the state's official recorded history. The enormous volume and diverse range of material culture presents challenges and opportunities. Through careful archaeological investigation, we can present different and new perspectives that are not recorded clearly in existing written, pictorial or oral archives. The merging and examination of all sources together is what enables us to understand the complexity of the history. This book will also present future directions in contemporary archaeology that will help bring the study focus beyond sites and assemblages of war and protest.

Uneven Growth Pedro Gadanho. 2014 In 2030, the world's population will be a staggering eight billion people. Of these, two-thirds will live in cities, and most will be poor. With limited resources, this uneven growth will be one of the greatest challenges faced by societies across the globe. Over the next years, city authorities, urban planners and designers, economists, and many others will have to join forces to avoid major social and economical catastrophes, working together to ensure these

expanding megacities will remain habitable. To engage this international debate The Museum of Modern Art presents Uneven Growth, Tactical Urbanisms for Expanding Megacities, its third iteration in the 'Issues in Contemporary Architecture' series. Following the same model as the critically acclaimed Rising Currents: Projects for New York's Waterfront and Foreclosed: Rehousing the American Dream, Uneven Growth brings together an international group of scholars, practitioners, and experts of architecture and urbanism in a series of workshops, an exhibition, and a publication to focus on how emergent forms of tactical urbanism can address the increasing inequality of urban development around the globe. Featuring proposals for six global metropolises - New York, Mumbai, Rio de Janeiro, Istanbul, Hong Kong and Lagos - each developed by a team pairing local practitioners with international researchers, Uneven Growth documents the brainstorming sessions and workshops. Interviews with each team and essays by leading scholars on the issue make the publication a rich resource for students and professionals alike, and a catalyst for worldwide change.

The German National Railway in World War II Janusz Piekalkiewicz.2008 The Second World War made the greatest demands on the German Reichsbahn (national railway). Year after year, great quantities of war materiel were transported and almost always delivered. At times the trains rolled over nearly the entire continent of Europe. This heavily illustrated book documents the everyday life along the German rail lines on many war fronts. This is the first book of its kind in English for both the railroad fan as well as the military historian.

Berechman.1993 Fundamental changes are taking place in Europe - demographic, economic, technological and lifestyles. Barriers are coming down and the EC 12 are likely to increase in number, making Europe the largest free trade area in the world. Transport will have a key role in achieving greater unification in Europe. This book takes a Europe-wide perspective in presenting transport by the different modes of travel. This contextual part is then balanced with extensive reviews of the policy issues and challenges facing decision makers - these include missing transport networks, the issue of sustainability, peripheral countries, regulatory reforms, links with Central and East European countries, finance and investment. Finally, a comparison is made with the USA. The book brings together 22 authors from 16 different countries, and this unique combination of international authors gives an authoritative overview of transport. It provides a definitive view of the main transport issues in Europe and analyses the main challenges facing decision makers at all levels.

Steam, Steel, and Stars Winston O. Link.1994-07-22 The glorious late years of steam railroading in America -- 1955 to 1960 -- are powerfully documented in this captivating book by a major American photographer. The riveting black-and-white photographs, made at night to capture the drama and energy of the great trains in action, cover every activity of the Norfolk and Western, the last railroad in the United States to use steam power, and also offer a nostalgic portrayal of trackside rural American life.
