**Transgenic Microalgae as Green Cell Factories** Rosa León,Aurora Galván Cejudo,Emilio Fernández.2008-12-10 Microalgae have been largely commercialized as food and feed additives, and their potential as a source of high-added value compounds is well known. Yet, only a few species of microalgae have been genetically transformed with efficiency. A better understanding of the mechanisms that control the regulation of gene expression in eukaryotes is therefore needed. In this book a group of outstanding researchers working on different areas of microalgae biotechnology offer a global vision of the genetic manipulation of microalgae and their applications.

**Lipids in Plant and Algae Development** Yuki Nakamura,Yonghua Li-Beisson.2016-03-29 This book summarizes recent advances in understanding the functions of plant and algal lipids in photosynthesis, in development and signaling, and in industrial applications. As readers will discover, biochemistry, enzymology and analytical chemistry, as well as gene knock-out studies have all contributed to our rapidly increasing understanding of the functions of lipids. In the past few decades, distinct physical and biochemical properties of specific lipid classes were revealed in plant and algal lipids and the functional aspects of lipids in modulating critical biological processes have been uncovered. These chapters from international authors across relevant research fields highlight the underlying evolutionary context of lipid function in photosynthetic unicellular and multicellular organisms. The book goes on to encompass what lipids can do for industrial applications at a time of fascination with plants and algae in carbon fixation and as sources for production of food, energy and novel chemicals. The developmental context is a part of the fresh and engaging perspective that is presented in this work which graduate students and scientists will find both illuminating and useful.

**Conservation of Marine Archaeological Objects** Colin Pearson.2014-05-20 Over the past twenty years there has been a significant increase in underwater activities such as scuba diving which, coupled with the adventure and romance always associated with shipwrecks, has led to rapid developments in the discovery and excavation of shipwrecked material. These shipwrecks are invaluable archaeological 'time capsules', which in the majority of cases have come to an equilibrium with their environment. As soon as artefacts on the wreck site are moved, this equilibrium is disturbed, and the artefacts may commence to deteriorate, sometimes in a rapid and devastating fashion. In fact excavation without having conservation facilities available is vandalism--the artefacts are much safer being left on the sea bed. Such famous shipwrecks as the Mary Rose (1545), the Wasa (1628) and the Batabia (1629) have not only brought the world's attention to these unique finds, but have also produced tremendous conservation problems. The treatment of a 30 metre waterlogged wooden hull or large cast iron cannon is still causing headaches to conservators.

**Placing Nature** Joan Nassauer.2013-02-22 Landscape ecology is a widely influential approach to looking at ecological function at the scale of landscapes, and accepting that human beings powerfully affect landscape pattern and function. It goes beyond investigation of pristine environments to consider ecological questions that are raised by patterns of farming, forestry, towns, and cities. *Placing Nature* is a groundbreaking volume in the field of landscape ecology, the result of collaborative work among experts in ecology, philosophy, art, literature, geography, landscape architecture, and history. Contributors asked each other: What is our appropriate role in nature? How are assumptions of Western culture and ingrained traditions placed in a new context of ecological knowledge? In this book, they consider the goals and strategies needed to bring human-dominated landscapes into intentional relationships with nature, articulating widely varied approaches to the task. In the essays: novelist Jane Smiley, ecologist Eville Gorham, and historian Curt Meine each examine the urgent realities of fitting together ecological function and culture philosopher Marcia Eaton and landscape architect Joan Nassauer each suggest ways to use the culture of nature to bring ecological health into settled landscapes urban geographer Judith Martin and urban historian Sam Bass Warner, geographer and landscape architect Deborah Karasov, and ecologist William Romme each explore the dynamics of land development decisions for their landscape ecological effects artist Chris Faust's photographs juxtapose the crass and mundane details of land use with the poetic power of ecological pattern. Every possible future landscape is the embodiment of some human choice. *Placing Nature* provides important insight for those who make such choices -- ecologists, ecosystem managers, watershed managers, conservation biologists, land developers, designers, planners -- and for all who wish to promote the ecological health of their communities.

**Iron and Steel in Art** David A. Scott, Gerhard Eggert.2017-03-03 - A comprehensive journey through the history of iron - Aims to become a main reference text on this subject - Of interest to enthusiasts of anthropology, iron-age and art This book will be of interest to all who seek to further their understanding of iron artefacts: their corrosion, conservation, and pigments based on iron compounds, which mankind has used for millennia. The authors take the reader through some of the latest observations on the occurrence and role of compounds of iron - from the hot water undersea vents where the presence of iron pyrites is thought to be vital to the emergence of life on Earth, to the discovery of jarosite on the surface of Mars, possibly indicating the presence of water; from the pyrophoric surprises one can have when dealing with iron artefacts taken from beneath the sea to the use of a blue oxide of iron as a pigment in mediaeval wall paintings; from rusticles on the Titanic to the analysis of coloring matter on the Turin shroud. The great variety of iron compounds is examined (from the simple oxides to the exotic green rusts, from Prussian blue to yellow jarosites), the corrosion of iron in different environments is discussed and a critical review of the many attempts to conserve iron is presented. This volume will serve as a useful textbook on the subject for many years.

**Death Waits in the Dark** Mark Edward Langley.2020-08-04 It took all of thirty seconds for two shots to bring the world of Margaret Tabaaha crashing down around her. After losing her husband in Afghanistan during the first year of Operation Enduring Freedom, her two sons were all she had left. Now they had been taken from her violently, deliberately, plunging her into a whiskey bottle and stripping away her reason for living. When Arthur Nakai receives a call from his first love, Margaret, her voice pleading for his help, it comes as he is attending a wake for one of the men he considered a brother from his days in the Marines 6th LAR Wolf Pack Battalion. Feeling a deep and responsible obligation to help her, Arthur soon finds himself involved in the multi-billion-dollar world of the oil and gas industry and coming face-to-face with an old adversary, Elias Dayton. Their paths had crossed when Arthur was a member of the Shadow Wolves, an elite tactical unit within US Customs and Border Protection. Now Dayton runs Patriot Security, a Blackwater-type firm that keeps the oil rigs, gas wells, and man camps secure from the Water Protectors, protesters pushing to stop the fracking and poisoning of Native lands. As Arthur works through the case from his end, Navajo police chief Jake Bilagody tackles it from another angle, looking into the strained relationship between the oil company and the Navajo people, all while searching for a missing Navajo man that may have become an unwilling piece on the reservation checkerboard. But when Arthur learns the identity of the boys' killer, he struggles to make sense of it. Because if the clues are right, he will be forced to make a decision that will haunt him for the rest of his life.

Section Three contains in-depth descriptions of the life history, behaviour, and ecology of the various invertebrate groups, and explains their important ecological contributions and relationships to humans. The Guide is broad in scope, geographically and taxonomically, and it is written at a substantive yet easily accessible level that will appeal to both novices and those with more advanced knowledge of the subject. It also contains more than 100 specially commissioned colour illustrations by the well-known scientific illustrator Amy Bartlett Wright that will greatly facilitate the easy and rapid identification of specimens.
