Nonlinear Potential Theory on Metric Spaces Anders Björn, Jana Björn. 2011 The Δ -Laplace equation is the main prototype for nonlinear elliptic problems and forms a basis for various applications, such as injection moulding of plastics, nonlinear elasticity theory, and image processing. Its solutions, called p -harmonic functions, have been studied in various contexts since the 1960s, first on Euclidean spaces and later on Riemannian manifolds, graphs, and Heisenberg groups. Nonlinear potential theory of p -harmonic functions on metric spaces has been developing since the 1990s and generalizes and unites these earlier theories. This monograph gives a unified treatment of the subject and covers most of the available results in the field, so far scattered over a large number of research papers. The aim is to serve both as an introduction to the area for interested readers and as a reference text for active researchers. The presentation is rather self contained, but it is assumed that readers know measure theory and functional analysis. The first half of the book deals with Sobolev type spaces, so-called Newtonian spaces, based on upper gradients on general metric spaces. In the second half, these spaces are used to study p -harmonic functions on metric spaces, and a nonlinear potential theory is developed under some additional, but natural, assumptions on the underlying metric space. Each chapter contains historical notes with relevant references, and an extensive index is provided at the end of the book.

The Method of Coordinates I. M. Gelfand, E. G. Glagoleva, A. A. Kirillov. 2002-01-01 Two-part treatment begins with discussions of coordinates of points on a line, coordinates of points in a plane, and coordinates of points in space. Part two examines geometry as an aid to calculation and peculiarities of four-dimensional space. Abundance of ingenious problems — includes solutions, answers, and hints. 1967 edition.

Revelation Unveiled Tim LaHaye. 2010-02-23 In *Revelation Unveiled*, Dr. Tim LaHaye, co-author of the best-selling *Left Behind* series, reveals the scriptural foundation of beloved novels. In this book, LaHaye explains the biblical topics he and Jerry Jenkins explored in *Left Behind: The Rapture of the Church: The Return of Christ The Great Tribulation The Final Battle against Satan and His Hosts The Seven Seals The Antichrist The Seven Trumpets The Seven Bowls of Wrath The Great White Throne The Destruction of Babylon The New Heaven and New Earth* Previously titled *Revelation Illustrated and Made Plain*, this revised and updated, verse-by-verse commentary of the book of Revelation includes numerous charts. With simple and accessible language, *Revelation Unveiled* will help you better understand the mysterious, final book of the Bible and its implications. Perfect for fans of the *Left Behind* books and for anyone confused or curious about the book of Revelation.

Why Cats Land on Their Feet Mark Levi. 2012-05-27 How to use physical reasoning to solve surprising paradoxes Ever wonder why cats land on their feet? Or what holds a spinning top upright? Or whether it is possible to feel the Earth's rotation in an airplane? *Why Cats Land on Their Feet* is a compendium of paradoxes and puzzles that readers can solve using their own physical intuition. And the surprising answers to virtually all of these astonishing paradoxes can be arrived at with no formal knowledge of physics. Mark Levi introduces each physical problem, sometimes gives a hint or two, and then fully explains the solution. Here readers can test their critical-thinking skills against a whole assortment of puzzles and paradoxes involving floating and diving, sailing and gliding, gymnastics, bike riding, outer space, throwing a ball from a moving car, centrifugal force, gyroscopic motion, and, of course, falling cats. Want to figure out how to open a wine bottle with a book? Or how to compute the square root of a number using a tennis shoe and a watch? *Why Cats Land on Their Feet* shows you how, and all that's required is a familiarity with basic high-school mathematics. This lively collection also features an appendix that explains all physical concepts used in the book, from Newton's laws to the fundamental theorem of calculus.

Pathology of the Larynx L. Michaels. 2012-12-06 The purpose of this work is to review the current knowledge of laryngeal pathology in the light of my experience at the Institute of Laryngology and Otology, London. The role of histopathological investigations in the care of patients with diseases of the larynx is given special consideration. Radiological study of the larynx has become more refined in recent years with the introduction of computerised tomography. Microlaryngoscopy with biopsy of the interior of the larynx is now a frequent procedure in the diagnosis of laryngeal disease. In the effort to interpret the findings resulting from these methods, the need for a monograph outlining the pathological basis of laryngeal disorders has arisen. To the best of my knowledge, such a work, devoted to the pathology of the larynx only, has never been written; a modern study in this field is certainly not available. I have aimed the text towards the practising pathologist in order to give it the broadest scope. It was necessary, therefore, to include an account of the basic anatomy of the larynx. For this purpose (and in subsequent descriptions throughout the book) I have not used the formal anatomical terminology for the two folds on either side of the ventricle of the larynx. There is some variation in the use of these terms, and they are not yet completely in general use.

So Long, Silver Screen Blutch. 2013 What are the movies? What effect do they have on us? Why do we love them so much? Blutch addresses all these questions in a series of interlocking short comics that move between scholarly history, romantic theory and ribald vignettes, featuring a motley cast of actors and topics including Burt Lancaster, Jean-Luc Godard, Claudia Cardinale, Tarzan, and Michel Piccoli. As much a visual essay as it is graphic novel, a daydream and a fantastic meditation on the other art of telling stories with images, *So Long, Silver Screen* is a new height for an uncontested master.

Bases in Function Spaces, Sampling, Discrepancy, Numerical Integration Hans Triebel. 2010 The first chapters of this book deal with Haar bases, Faber bases and some spline bases for function spaces in Euclidean n -space and n -cubes. These are used in the subsequent chapters to study sampling and numerical integration preferably in spaces with dominating mixed smoothness. The subject of the last chapter is the symbiotic relationship between numerical integration and discrepancy, measuring the deviation of sets of points from uniformity. This book is addressed to graduate students and mathematicians who have a working knowledge of basic elements of function spaces and approximation theory and who are interested in the subtle interplay between function spaces, complexity theory and number theory (discrepancy).

Risk Management and Assessment Jorge Rocha, Sandra Oliveira, César Capinha. 2020-10-14 Risk analysis, risk evaluation and risk management are the three core areas in the process known as 'Risk Assessment'. Risk assessment corresponds to the joint effort of identifying and analysing potential future events, and evaluating the acceptability of risk based on the risk analysis, while considering influencing factors. In short, risk assessment analyses what can go wrong, how likely it is to happen and, if it happens, what are the potential consequences. Since risk is a multi-disciplinary domain, this book gathers contributions covering a wide spectrum of topics with regard to their theoretical background and field of application. The work is organized in the three core areas of risk assessment.

Twelve Years a Slave Solomon Northup. 2024-01-04 Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Northup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US, on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of

a mystery, though it is thought that he struggled to cope with family life after being freed.

Geometrisation of 3-manifolds .2010 The Geometrisation Conjecture was proposed by William Thurston in the mid 1970s in order to classify compact 3-manifolds by means of a canonical decomposition along essential, embedded surfaces into pieces that possess geometric structures. It contains the famous Poincaré Conjecture as a special case. In 2002, Grigory Perelman announced a proof of the Geometrisation Conjecture based on Richard Hamilton's Ricci flow approach, and presented it in a series of three celebrated arXiv preprints. Since then there has been an ongoing effort to understand Perelman's work by giving more detailed and accessible presentations of his ideas or alternative arguments for various parts of the proof. This book is a contribution to this endeavour. Its two main innovations are first a simplified version of Perelman's Ricci flow with surgery, which is called Ricci flow with bubbling-off, and secondly a completely different and original approach to the last step of the proof. In addition, special effort has been made to simplify and streamline the overall structure of the argument, and make the various parts independent of one another. A complete proof of the Geometrisation Conjecture is given, modulo pre-Perelman results on Ricci flow, Perelman's results on the π_2 -functional and κ -solutions, as well as the Colding-Minicozzi extinction paper. The book can be read by anyone already familiar with these results, or willing to accept them as black boxes. The structure of the proof is presented in a lengthy introduction, which does not require knowledge of geometric analysis. The bulk of the proof is the existence theorem for Ricci flow with bubbling-off, which is treated in parts I and II. Part III deals with the long time behaviour of Ricci flow with bubbling-off. Part IV finishes the proof of the Geometrisation Conjecture.

Mathematics in Popular Culture Jessica K. Sklar,Elizabeth S. Sklar.2014-01-10 Mathematics has maintained a surprising presence in popular media for over a century. In recent years, the movies Good Will Hunting, A Beautiful Mind, and Stand and Deliver, the stage plays Breaking the Code and Proof, the novella Flatland and the hugely successful television crime series NUMB3RS all weave mathematics prominently into their storylines. Less obvious but pivotal references to the subject appear in the blockbuster TV show Lost, the cult movie The Princess Bride, and even Tolstoy's War and Peace. In this collection of new essays, contributors consider the role of math in everything from films, baseball, crossword puzzles, fantasy role-playing games, and television shows to science fiction tales, award-winning plays and classic works of literature. Revealing the broad range of intersections between mathematics and mainstream culture, this collection demonstrates that even "mass entertainment" can have a hidden depth.

Efficient Numerical Methods for Non-local Operators Steffen Börm.2010 Hierarchical matrices present an efficient way of treating dense matrices that arise in the context of integral equations, elliptic partial differential equations, and control theory. While a dense $n \times n$ matrix in standard representation requires n^2 units of storage, a hierarchical matrix can approximate the matrix in a compact representation requiring only $O(n k \log n)$ units of storage, where k is a parameter controlling the accuracy. Hierarchical matrices have been successfully applied to approximate matrices arising in the context of boundary integral methods, to construct preconditioners for partial differential equations, to evaluate matrix functions, and to solve matrix equations used in control theory. H^2 -matrices offer a refinement of hierarchical matrices: Using a multilevel representation of submatrices, the efficiency can be significantly improved, particularly for large problems. This book gives an introduction to the basic concepts and presents a general framework that can be used to analyze the complexity and accuracy of H^2 -matrix techniques. Starting from basic ideas of numerical linear algebra and numerical analysis, the theory is developed in a straightforward and systematic way, accessible to advanced students and researchers in numerical mathematics and scientific computing. Special techniques are required only in isolated sections, e.g., for certain classes of model problems.

Artificial Intelligence in Behavioral and Mental Health Care David D. Luxton.2015-09-10 Artificial Intelligence in Behavioral and Mental Health Care summarizes recent advances in artificial intelligence as it applies to mental health clinical practice. Each chapter provides a technical description of the advance, review of application in clinical practice, and empirical data on clinical efficacy. In addition, each chapter includes a discussion of practical issues in clinical settings, ethical considerations, and limitations of use. The book encompasses AI based advances in decision-making, in assessment and treatment, in providing education to clients, robot assisted task completion, and the use of AI for research and data gathering. This book will be of use to mental health practitioners interested in learning about, or incorporating AI advances into their practice and for researchers interested in a comprehensive review of these advances in one source. Summarizes AI advances for use in mental health practice Includes advances in AI based decision-making and consultation Describes AI applications for assessment and treatment Details AI advances in robots for clinical settings Provides empirical data on clinical efficacy Explores practical issues of use in clinical settings

The Nile Henri J. Dumont.2009-05-06 What have we learnt about the Nile since the mid-1970s, the moment when Julian Rzoska decided that the time had come to publish a comprehensive volume about the biology, and the geological and cultural history of that great river? And what changes have meanwhile occurred in the basin? The human population has more than doubled, especially in Egypt, but also in East Africa. Locally, industrial development has taken place, and the Aswan High Dam was clearly not the last major infrastructure work that was carried out. More dams have been built, and some water diversions, like the Toshka lakes, have created new expanses of water in the middle of the Sahara desert. What are the effects of all this on the ecology and economy of the Basin? That is what the present book sets out to explore, 33 years after the publication of "The Nile: Biology of an Ancient River". Thirty-seven authors have taken up the challenge, and have written the "new" book. They come from 13 different countries, and 15 among them represent the largest Nilotic states (Egypt, Sudan, Ethiopia, Uganda, and Kenya). Julian Rzoska died in 1984, and most of the authors of his book have now either disappeared or retired from research. Only Jack Talling and Samir Ghabbour were still available to participate again.

Management of Unintended and Abnormal Pregnancy Maureen Paul,Steve Lichtenberg,Lynn Borgatta,David A. Grimes,Phillip G.

Stubblefield,Mitchell D. Creinin.2011-08-24 Access to high quality abortion care is essential to women's health, as evidenced by the dramatic decrease in pregnancy-related morbidity and mortality since the legalization of abortion in the United States, and by high rates of maternal death and complications in those countries where abortion is still provided under unsafe conditions. The past two decades have brought important advances in abortion care as well as increasing cross-disciplinary use of abortion technologies in women's health care. Abortion is an important option for pregnant women who have serious medical conditions or fetal abnormalities, and fetal reduction techniques are now well-integrated into infertility treatment to reduce the risks of multiple pregnancies resulting from assisted reproductive technologies. Management of Unintended and Abnormal Pregnancy: Comprehensive Abortion Care is the textbook of the National Abortion Federation, and serves as the standard, evidence-based reference text in abortion care. This state-of-the-art textbook provides a comprehensive overview of the public health implications of unsafe abortion and reviews the best surgical and medical practices for pregnancy termination, as well as managing ectopic and other abnormal pregnancies.

Management of Unintended and Abnormal Pregnancy: Comprehensive Abortion Care is the leading source for a comprehensive understanding of issues related to unintended and abnormal pregnancy. This textbook: is authored by internationally-known leaders in women's health care; addresses unintended pregnancy and abortion from historical, legal, public health, clinical, and quality care perspectives; includes chapters on pregnancy loss, ectopic pregnancy, gestational trophoblastic disease, and multifetal pregnancy reduction; covers treatment of pregnancies in the first and second trimester by both medical and surgical techniques; and provides resources for clinical, scientific, and social support for the abortion provider and patient.

A grammar of modern Indo-European Carlos Quiles,Kárlós Kúriákí,Fernando López-Menchero.2011-05-03 A Grammar of Modern Indo-European is a complete reference guide to a living Indo-European language. It contains a comprehensive description of Proto-Indo-European grammar, and offers an analysis of the complexities of the prehistoric language and its reconstruction from its descendant languages. Written in a fresh and accessible style, and illustrated with maps, figures and tables, this book focusses on the real patterns of use of Late Indo-European. The book is well

organised and is filled with full, clear explanations of areas of confusion and difficulty. It also contains an extensive English - Indo-European, Indo-European - English vocabulary, as well as detailed etymological notes, designed to provide readers with an easy access to the information they require. An essential reference source for the student of Indo-European as a learned and living language, this work will appeal to students of languages, classics, and the ancient world, as well as to general readers interested in the history of language, and in speaking the direct ancestor of the world's largest language family.

Nonabelian Algebraic Topology Ronald Brown, Philip J. Higgins, Rafael Sivera. 2011 The main theme of this book is that the use of filtered spaces rather than just topological spaces allows the development of basic algebraic topology in terms of higher homotopy groupoids; these algebraic structures better reflect the geometry of subdivision and composition than those commonly in use. Exploration of these uses of higher dimensional versions of groupoids has been largely the work of the first two authors since the mid 1960s. The structure of the book is intended to make it useful to a wide class of students and researchers for learning and evaluating these methods, primarily in algebraic topology but also in higher category theory and its applications in analogous areas of mathematics, physics, and computer science. Part I explains the intuitions and theory in dimensions 1 and 2, with many figures and diagrams, and a detailed account of the theory of crossed modules. Part II develops the applications of crossed complexes. The engine driving these applications is the work of Part III on cubical ω -groupoids, their relations to crossed complexes, and their homotopically defined examples for filtered spaces. Part III also includes a chapter suggesting further directions and problems, and three appendices give accounts of some relevant aspects of category theory. Endnotes for each chapter give further history and references.

Tractability of Multivariate Problems: Linear information Erich Novak, H. Woźniakowski. 2008 Multivariate problems occur in many applications. These problems are defined on spaces of d -variate functions and d can be huge—in the hundreds or even in the thousands. Some high-dimensional problems can be solved efficiently to within ϵ , i.e., the cost increases polynomially in ϵ^{-1} and d . However, there are many multivariate problems for which even the minimal cost increases exponentially in d . This exponential dependence on d is called intractability or the curse of dimensionality. This is the first volume of a three-volume set comprising a comprehensive study of the tractability of multivariate problems. It is devoted to tractability in the case of algorithms using linear information and develops the theory for multivariate problems in various settings: worst case, average case, randomized and probabilistic. A problem is tractable if its minimal cost is not exponential in ϵ^{-1} and d . There are various notions of tractability, depending on how we measure the lack of exponential dependence. For example, a problem is polynomially tractable if its minimal cost is polynomial in ϵ^{-1} and d . The study of tractability was initiated about 15 years ago. This is the first and only research monograph on this subject. Many multivariate problems suffer from the curse of dimensionality when they are defined over classical (unweighted) spaces. In this case, all variables and groups of variables play the same role, which causes the minimal cost to be exponential in d . But many practically important problems are solved today for huge d in a reasonable time. One of the most intriguing challenges of the theory is to understand why this is possible. Multivariate problems may become weakly tractable, polynomially tractable or even strongly polynomially tractable if they are defined over weighted spaces with properly decaying weights. One of the main purposes of this book is to study weighted spaces and obtain necessary and sufficient conditions on weights for various notions of tractability. The book is of interest for researchers working in computational mathematics, especially in approximation of high-dimensional problems. It may be also suitable for graduate courses and seminars. The text concludes with a list of thirty open problems that can be good candidates for future tractability research.

Separately Analytic Functions Marek Jarnicki, Peter Pflug. 2011 The story of separately holomorphic functions began about 100 years ago. During the second half of the 19th century, it became known that a separately continuous function is not necessarily continuous as a function of all variables. At the beginning of the 20th century, the study of separately holomorphic functions started due to the fundamental work of Osgood and Hartogs. This book provides the first self-contained and complete presentation of the study of separately holomorphic functions, from its beginnings to current research. Most of the results presented have never been published before in book form. The text is divided into two parts. The first part deals with separately holomorphic functions, "without singularities". The second part addresses the situation of existing singularities. A discussion of the classical results related to separately holomorphic functions leads to the most fundamental result, the classical cross theorem as well as various extensions and generalizations, to more complicated "crosses". Additionally, several applications for other classes of "separately regular" functions are given. A solid background in basic complex analysis is a prerequisite. To make the book self contained, all the results are collected in special introductory chapters and referred to at the beginning of each section. This book is addressed to students and researchers in several complex variables as well as mathematicians and theoretical physicists interested in this area of mathematics.

Simon Alexander Masters. 2012-02-28 Alexander Masters tripped over his first book subject on a Cambridge sidewalk, and the result was the multi-award-winning bestseller *Stuart: A Life Backwards*. His second, he's found under his floorboards. One of the greatest mathematical prodigies of the twentieth century, Simon Norton stomps around Alexander's basement in semidarkness, dodging between stalagmites of bus timetables and engorged plastic bags, eating tinned kippers stirred into packets of Bombay mix. Simon is exploring a theoretical puzzle so complex and critical to our understanding of the universe that it is known as the Monster. It looks like a sudoku table—except a sudoku table has nine columns of numbers. The Monster has 80801742479451287588645990496171075700575436800000000 columns. But that's not the whole story. What's inside the decaying sports bag he never lets out of his clutches? Why does he hurtle out of the house in the middle of the night? And—good God!—what is that noxious smell that creeps up the stairwell? Grumpy, poignant, comical—more intimate than either the author or his quarry intended—*Simon: The Genius in My Basement* is the story of a friendship and a pursuit. Part biography, part memoir, and part popular science, it is a study of the frailty of brilliance, the measures of happiness, and Britain's most uncooperative egghead eccentric.

A Storm of Words: Vetera Verba, Priscae Linguae Carlos Quiles. 2019 What was initially described by Krahe as an Old European community based on studies of European hydronymy, and what has been described through comparative grammar as a North-West Indo-European dialect continuum - sharing common lexical and grammatical traits -, is now more clearly defined as an ancient Indo-European proto-language that expanded at least twice, from two small European regions during the third millennium: from the North Pontic steppe to the Carpathian basin in the first half, and from the Middle Danube to the rest of Europe in the second half. This book deals with that matter from a linguistic point of view and, as a consequence, with the reconstruction of different Proto-Indo-European stages and dialects, as well as neighbouring languages, including especially Uralic and its dialects.

Integrated River Basin Governance Bruce Hooper. 2005-08-31 *Integrated River Basin Governance - Learning from International Experience* is designed to help practitioners implement integrated approaches to river basin management (IRBM). It aims to help the coming generation of senior university students learn how to design IRBM and it provides current researchers and the broader water community with a resource on river basin management. Drawing on both past and present river basin and valley scale catchment management examples from around the world, the book develops an integration framework for river basin management. Grounded in the theory and literature of natural resources management and planning, the thrust of the book is to assist policy and planning, rather than extend knowledge of hydrology, biophysical modelling or aquatic ecology.

Providing a classification of river basin organizations and their use, the book also covers fundamental issues related to implementation: decision-making, institutions and organizations, information management, participation and awareness, legal and economic issues, integration and coordination processes, building human capacity. Integrated River Basin Governance focuses on the social, economic, organizational and institutional arrangements of river basin management. Methods are outlined for implementing strategic and regional approaches to river basin management, noting the importance of context and other key elements which have been shown to impede success. The book includes a range of tools for river basin governance methods, derived from real life experiences in both developed and developing countries. The successes and failures of river basin management are discussed, and lessons learned from both are presented. The ebook for this title is available to download for free on the WaterWiki.

Drug Therapy for the Elderly Martin Wehling.2012-08-17 With people aged 65 years and older currently making up the fastest growing age group throughout the world, the demographic revolution of an aging society will inevitably lead to increased pressure to develop a rationalistic and age-tailored process of diagnosis and treatment among the elderly. As aging people often suffer from several chronic diseases and are being treated with multiple medications concurrently, unwanted drug interactions occur more frequently. Whereas recent approaches have recommended to remove particular drugs from the medication regimen to avoid adverse effects, *Drug Therapy for the Elderly* underlines both indispensable and dispensable elements of drug treatment in order to provide an overall assessment of drugs suitable for the aged. In view of the multimorbidity and polypharmacy situations experienced by elderly patients, this book takes into account the special needs and requirements shown by this group, thus serving as a timely reference for physicians who treat the elderly.

Homotopy Quantum Field Theory Vladimir G. Turaev.2010 Homotopy Quantum Field Theory (HQFT) is a branch of Topological Quantum Field Theory founded by E. Witten and M. Atiyah. It applies ideas from theoretical physics to study principal bundles over manifolds and, more generally, homotopy classes of maps from manifolds to a fixed target space. This book is the first systematic exposition of Homotopy Quantum Field Theory. It starts with a formal definition of an HQFT and provides examples of HQFTs in all dimensions. The main body of the text is focused on 2-dimensional and 3-dimensional HQFTs. A study of these HQFTs leads to new algebraic objects: crossed Frobenius group-algebras, crossed ribbon group-categories, and Hopf group-coalgebras. These notions and their connections with HQFTs are discussed in detail. The text ends with several appendices including an outline of recent developments and a list of open problems. Three appendices by M. Muger and A. Virelizier summarize their work in this area. The book is addressed to mathematicians, theoretical physicists, and graduate students interested in topological aspects of quantum field theory. The exposition is self-contained and well suited for a one-semester graduate course. Prerequisites include only basics of algebra and topology.

Descartes' Dream Philip J. Davis,Reuben Hersh.2005-01-01 These provocative essays take a modern look at the 17th-century thinker's dream, examining the influences of mathematics on society, particularly in light of technological advances. They survey the conditions that elicit the application of mathematic principles; the applications' effectiveness; and how applied mathematics transform perceptions of reality. 1987 edition.

Ruta Tannenbaum Miljenko Jergovic.2011-05-06 The novel *Ruta Tannenbaum* is by prolific, award-winning Croatian author Miljenko Jergović. First published in 2006, the story illuminates life and society in Yugoslavia between the world wars. The title character was inspired by real-life figure Lea Deutsch, the now-forgotten Shirley Temple of Yugoslavia, who was murdered in the Holocaust. Using their shared Jewish heritage as a starting point, Jergovic constructs a fictional family history populated by historical figures with the precocious Ruta at the center. Stephen Dickey's translation masterfully captures Jergovic's colloquial yet deeply observed style, which animates the tangled and troubled history of persecution and war in Croatia.

Environmental Archaeology and the Social Order John G. Evans.2004-02-24 Presenting a wide variety of case studies, ranging from the early Palaeolithic to Post-modernity, and from Europe to the Andes, West and East Africa, and the USA, *Environmental Archaeology and the Social Order* deals with both the theory and method of environmental archaeology. Including significant sections on Neanderthals, Palaeolithic mobiliary art and the origins of farming, as well as transhumance, climate as social construct, field survey and the place of documents in environmental research, Professor Evans interprets his findings in social constructionist terms, creating an important argument against the use of traditional materialist and processualist paradigms. This original and controversial volume sets a new agenda for the study and understanding of environmental archaeology, and will prove an informative and useful purchase.

Language and Speech in Synchrony and Diachrony Galina T. Polenova,Tatiana G. Klikushina.2017 This collection arises from the Fifth International Scientific Conference, *Language and Speech in Synchrony and Diachrony*, held in Taganrog, Russia, devoted to the memory of Russian linguist and philosopher Professor P.V. Chesnokov. It examines the functioning of different levels of linguistic units and categories of speech with regard to intra- and cross-cultural communication in pragmatics of speech. The theory of language and speech is represented not only in synchrony, but in diachrony, in the comparative and typological aspects of languages from various groups, including non-literate Yenisei languages. A further subject of discussion within is the problem of translation, and the relation of language and speech, text and discourse.The volume consists of six parts: Part I: Language and its grammatical categories in diachronic aspect; Part II: Grammar and other subsystems of the language; Part III: Cross-cultural communication and translation; Part IV: Problems of linguistic and diachronic typology; Part V: Pragmalinguistics and speech; and Part VI: Text, discourse, speech in anthropocentric paradigm.The book will be of interest to scholars of philology, linguistics, culture and humanities, as well as those interested in issues of language, culture and language teaching methods.
