Artificial Intelligence in Education R. Luckin, K.R. Koedinger, J. Greer. 2007-06-29 The nature of technology has changed since Artificial Intelligence in Education (AIED) was conceptualised as a research community and Interactive Learning Environments were initially developed. Technology is smaller, more mobile, networked, pervasive and often ubiquitous as well as being provided by the standard desktop PC. This creates the potential for technology supported learning wherever and whenever learners need and want it. However, in order to take advantage of this potential for greater flexibility we need to understand and model learners and the contexts with which they interact in a manner that enables us to design, deploy and evaluate technology to most effectively support learning across multiple locations, subjects and times. The AIED community has much to contribute to this endeavour. This publication contains papers, posters and tutorials from the 2007 Artificial Intelligence in Education conference in Los Angeles, CA, USA.

Salesforce Handbook Wes Nolte, Jeff Douglas. 2011-03-01 This book is not intended to be a deep-dive on security, programming, reporting, configuration, etc. but more of a high-level overview on salesforce.com, Force.com development, tools, methodology and other resources. We will not cover all aspects of salesforce.com. We wrote this book to (hopefully) become an invaluable resource for anyone new or inexperienced with the Force.com platform. For new administrators and developers coming on to the platform, we see a gaping hole in existing reference books. This book is not intended for end users or advanced developers. This book is for people somewhere in the middle; let's say a business analyst or a new Java or .NET developer. We would like this to be the first book you pick up after your boss walks in and says, Let's take a look at salesforce.com and see if we can build some applications in the cloud. This book contains the information that we wish we had when we started developing applications on Force.com.

The Numerical Solution of Partial Differential Equations Governing Convection Harvard Lomax,Paul Kutler,Francis Brock Fuller.1970 The time-dependent Navier-Stokes equations are a mathematical model for fluid flows that contain two quite different physical phenomena. These phenomena are contained in the formula representing the conservation of momentum and are referred to as convection and dissipation. The optimum numerical reduction from differential to difference equations of the terms that model these two aspects of fluid flow can be quite different. The report is devoted to a simple but systematic study of the numerical methods best suited for the analysis of convection. (Author).
