The Power of Virtual Distance Karen Sobel Lojeski,Richard R. Reilly.2020-04-06 This revised second edition presents 15 years of data on Virtual Distance metrics and their predictive impact on organizational success factors—shedding new light on how to correct for communication challenges that often show up as a foggy set of digital disconnects where the vitality of the virtual workforce often gets lost in transmission. This still-evolving Digital Age conundrum continues to present new complications. The rise of remote work which rests on an increasing reliance on electronic communication and the overall growth of virtual interactions has led to the escalation of a phenomenon called Virtual Distance. Virtual Distance, which influences our behavior through three components—Physical Distance, Operational Distance, and Affinity Distance—affects not only how we relate to others thousands of miles away but even to co-workers sitting right next to each other! Perhaps even more problematic, Virtual Distance causes measureable malfunctions in teamwork, innovation, leader effectiveness and overall performance. But it doesn't have to be this way. The Power of Virtual Distance offers specific, proven and predictable solutions that can reverse these trends and turn Virtual Distance into a unification strategy to capture untapped competitive advantage. Surprised? The Power of Virtual Distance, 2nd Edition is a must-read for leadership who want to understand the true and quantifiable costs of the virtual workplace. For the first time ever, readers can take the guesswork out of managing the virtual workforce by applying a mathematical approach derived from the extensive Virtual Distance data set: The Virtual Distance Ratio. The Virtual Distance Ratio can precisely pinpoint the particular impacts of Virtual Distance on the organization's critical success factors. Beyond business metrics, Virtual Distance solutions also detail ways to restore meaningfulness and well-being into people's experience of work, enhancing life lived in the Digital Age. The Power of Virtual Distance reveals an updated set of data, including the first award-winning analysis, collected from an extended range of executives to individual contributors, that represent situations and solutions in more than 36 industries in 55 countries across the globe. Readers will get a "first look" at the data and its revelations on how to be less isolated and more integrated. Helping managers globally, this book: Offers new, real-world case studies and a chance for readers to participate in thought experiments to help with personal performance, group synergy and by extension, relationship dynamics of all kinds Demonstrates (with statistically significant trend analyses) that Virtual Distance is growing at exponential rates in every corner of communities worldwide Offers expert advice on how to manage the "unintended human consequences" of today's digital technologies Companies that successfully harness the power of Virtual Distance demonstrate better performance. The second edition of The Power of Virtual Distance is a valuable, one-of-a-kind resource for everyone - from the C-suite to human resource

professionals; from divisional leaders to project managers. Everyone in the organization can benefit by discovering how to improve financials, innovation, trust, employee engagement, satisfaction, organizational citizenship and other key performance indicators. And perhaps best of all, by following the prescriptions on how to reduce Virtual Distance, the entire workforce will have the tools they need to bring about a revival of meaning, purpose and an enlivened sense of “humanhood” back into everyday work and everyday life.

Proceedings of the 2023 3rd International Conference on Business Administration and Data Science (BADs 2023) Bijay Kumar Kandel,Anuranjan Misra,Junfeng Liao,Changiz Valmohammadi.2024-01-27 This is an open access book. In the current situation of rapid economic development, the competition in the market is increasingly fierce. The drawbacks of traditional enterprise management and the

backward management concept have seriously hindered the normal development of enterprises. In order to improve their competitive advantages and market share, enterprises must optimize their management methods and build a modern business administration system. In this situation, enterprises can only promote their development process by improving their business management mode and formulating scientific business management policies. Data science is one of the most important tools for optimizing business administration. Data science is an interdisciplinary field that uses scientific methods, processes, algorithms and systems to extract value from data. Data scientists use a combination of skills (including statistics, computer science and business knowledge) to analyze data collected from the Web, smartphones, customers, sensors and other sources. Data is the cornerstone of innovation, and data scientists gather information from data, discovering hidden trends from raw data and generating insights that companies can use to transform business problems into research projects that can then be translated back into practical solutions. Based on this, BADS 2023 discusses the state of modern business administration and the corresponding improvement measures in the context of the current reality, and It also provides a platform for scholars in related fields to exchange and share information, discuss how the two affect each other, and promote the modernization of business administration by studying certain business administration issues. To open new perspectives, broaden horizons, and examine the issues being discussed by the participants. Create an international-level forum for sharing, research and exchange that will expose participants to the latest research directions, results and content in different fields, thus inspiring them to come up with new research ideas.

E-Business and Virtual Enterprises Luis M. Camarinha-Matos, Hamideh Afsarmanesh, Ricardo Rabelo. 2013-04-16 The fast progress in computer networks and their wide availability complemented with on one hand the explosion of the mobile computing and on the other hand the trends in the direction of ubiquitous computing, act as powerful enablers for new forms of highly dynamic collaborative organizations and emergence of new business practices. The first efforts in virtual enterprises (VE) were strongly constrained by the need to design and develop horizontal infrastructures aimed at supporting the basic collaboration needs of consortia of enterprises. Even pilot projects that were focused on specific business domains were forced to first develop some basic infrastructures before being able to develop their specific business models. Nowadays, although there is still a need to consolidate and standardize the horizontal infrastructures, the focus is more and more directed to the development of new vertical business models and the corresponding support tools. At the same time, in the earlier R&D projects, the attention was almost exclusively devoted to the operation phase of the VE life cycle, while now there are more activities addressing the creation phase, developing mechanisms to support the rapid formation of new virtual organizations for new business opportunities. In order to complete the life cycle, there is a need to also invest on support for VE dissolution.
