Kolesinski, Evelyn Nelson-Weaver, Daryl Diamond. 2013-09-11 Digital Solidarity in Education is a book for educators, scholars, and students interested in better understanding both the role technology can play in schools and its potential for strengthening communities, optimizing the effects of globalization, and increasing educational access. The digital solidarity movement prioritizes the engagement and mobilization of students from diverse racial, ethnic, linguistic, and economic backgrounds, and with giftedness and/or disabilities, to utilize and apply technologies. This powerful book introduces innovative technological programs including virtual schools, e-tutoring, and interactive online communities for K-12 students that can:

- increase students' knowledge and understanding of advanced concepts while reinforcing their basic skills;
- reinforce students' communication in their first language while introducing second and third language possibilities;
- nurture students' capabilities to think analytically, while using creative and innovative ideas to think simultaneously “outside of the box.”

The experienced author team shows how collaborative partners from the private sector can assist public school systems and educators in creating access for all students to technological innovations, with a goal of

increasing individual opportunities for future college and career success. Combining theoretical scholarship and research with the personal perspectives of practitioners in the field, this volume shares with readers both the nuts and bolts of using technology in education, and the importance of doing so.

Database and Image Processing Using Java GUI and Microsoft Access Vivian

Siahaan.2019-11-01 The book details how programmers and database professionals can develop

Access-based Java GUI applications that involves database and image processing. This book will help you quickly write efficient, high-quality access-database-driven code with Java. It's an ideal way to begin, whether you're new to programming or a professional developer versed in other languages. The lessons in this book are a highly organized and well-indexed set of tutorials meant for students and programmers. This kind of learning is often the focus of training. In this book, you will learn how to build from scratch two access database management systems using Java. In designing a GUI and as an IDE, you will make use of the NetBeans tool. In chapter one, you will create School database and six tables. In chapter two, you will study: Creating the initial three table projects in the school database: Teacher table, TClass table, and Subject table; Creating database configuration files; Creating a Java GUI for viewing and navigating the contents of each table; Creating a Java GUI for inserting and editing tables; and Creating a Java GUI to join and query the three tables. In chapter three, you will learn: Creating the main form to connect all forms; Creating a project will add three more tables to the school database: the Student table, the Parent table, and Tuition table; Creating a Java GUI to view and navigate the contents of each table; Creating a Java GUI for editing, inserting, and deleting records in each table; Creating a Java GUI to join and query the three tables and all six. Here, you will design a Java GUI to display, edit, fill, and delete data in both tables. In chapter ten, you will add two tables: Victim and Case_File. The Case_File table will connect four other tables: Suspect, Police, Investigator and Victim. The Victim table has nine columns: victim_id (primary key), victim_name, crime_type, birth_date, crime_date, gender, address, telephone, and photo. The Case_File has seven columns: case_file_id (primary key), suspect_id (foreign key), police_id (foreign key), investigator_id (foreign key), victim_id (foreign key), status, and description. Smart Economy in Smart Cities T. M. Vinod Kumar.2016-08-25 The present book highlights studies that show how smart cities promote urban economic development. The book surveys the state of the art of Smart City Economic Development through a literature survey. The book uses 13 in depth city research case studies in 10 countries such as the North America, Europe, Africa and Asia to explain how a smart economy changes the urban spatial system and vice versa. This book focuses on exploratory city studies in different countries, which investigate how urban spatial systems adapt to the specific needs of smart urban economy. The theory of smart city economic

development is not yet entirely understood and applied in metropolitan regional plans. Smart urban economies are largely the result of the influence of ICT applications on all aspects of urban economy, which in turn changes the land-use system. It points out that the dynamics of smart city GDP creation takes 'different paths,' which need further empirical study, hypothesis testing and mathematical modelling. Although there are hypotheses on how smart cities generate wealth and social benefits for nations, there are no significant empirical studies available on how they generate urban economic development through urban spatial adaptation. This book with 13 cities research studies is one attempt to fill in the gap in knowledge base.
