The Acquisition and Retention of Knowledge: A Cognitive View D.P. Ausubel.2012-12-06 In 1963 an initial attempt was made in my *The Psychology of Meaningful Verbal Learning* to present a cognitive theory of meaningful as opposed to rote verbal learning. It was based on the proposition that the acquisition and retention of knowledge (particularly of verbal knowledge as, for example, in school, or subject-matter learning) is the product of an active, integrative, interactional process between instructional material (subject matter) and relevant ideas in the learner's cognitive structure to which the new ideas are relatable in particular ways. This book is a full-scale revision of my 1963 monograph, *The Psychology of Meaningful Verbal Learning*, in the sense that it addresses the major aforementioned and hitherto unmet goals by providing for an expansion, clarification, differentiation, and sharper focusing of the principal psychological variables and processes involved in meaningful learning and retention, i.e., for their interrelationships and interactions leading to the generation of new meanings in the individual learner. The preparation of this new monograph was largely necessitated by the virtual collapse of the neobehavioristic theoretical orientation to learning during the previous forty years; and by the meteoric rise in the seventies and beyond of constructivist approaches to learning theory.

An Essay on the Principle of Population Thomas Robert Malthus.2013-01-01 Around 1796, Mr. Malthus, an English gentleman, had finished reading a book that confidently predicted human life would continue to grow richer, more comfortable and more secure, and that nothing could stop the march of progress. He discussed this theme with his son, Thomas, and Thomas ardently disagreed with both his father and the book he had been reading, along with the entire idea of unending human progress. Mr. Malthus suggested that he write down his objections so that they could discuss them point-by-point. Not long after, Thomas returned with a rather long essay. His father was so impressed that he urged his son to have it published. And so, in 1798, appeared *An Essay on Population*, by British political economist and demographer THOMAS ROBERT MALTHUS (1766-1834). Though it was attacked at the time and ridiculed for many years afterward, it has remained one of the most influential works in the English language on the general checks and balances of the world's population and its necessary control. This is a replica of the 1826 sixth edition. Volume 2 includes: Book III: Of the Different Systems, Which Have Been Proposed or Have Prevailed in Society, As They Affect the Evils Arising from The Principle of Population and Book IV: Of our future Prospects respecting the Removal or Mitigation of the Evils arising from the Principle of Population.

How to Get Approved for the Best Mortgage Without Sticking a Fork in Your Eye M. S. Elysia Stobbe.2015-06-25 Did you know that over 50% of mortgages don't close? Do you know how much home you can buy? Do you know how much paperwork is involved? Most people don't know how much home purchasing power they have, how much to expect for closing costs (varies by state), or how much paperwork is involved when applying for a home loan. Most people have no idea the difference between loan programs from bank to bank, lender to lender, or broker to broker- or what the differences are between the main types of residential mortgage providers. Most people have no criteria for choosing a lender, the type of loan to seek, or how much down payment is best for them. For example, are there differences between the types of property that may affect down payment? The mortgage industry is packed with nuance, which can lead to confusion for the consumer. While trying to buy a home, you may have people from many different professions telling you what you should do and how to make decisions-who should you listen to in which situations? Your most personal financial information is critical to the mortgage process and yet do you know who you are sending it to? What about mortgage insurance? Why is it required and when? The two questions I most often hear are: What's the payment? and, What's the interest rate? While these questions are important, there are several other questions that are just as critical: what is the right loan type for me; is there an up-front funding fee for this loan; what are the differences in available mortgage insurance; how will property type restrictions affect my loan; what are the pros and cons of this loan; what is the down payment requirement with this loan choice over another; what are the closing costs associated with each loan type; and, who is allowed to pay the closing costs? Successfully navigating the maze of questions, regulations, and requirements ultimately leads to a mortgage closing. Through over ten years of experience, thousands of clients, hundreds of Realtor and builder transactions (time line constraint purchases), and, as a licensed loan originator in 9 states and the District of Columbia, I have developed a wealth of knowledge about regulations and requirements. My commitment to client service and caring about their home buying experience has driven my passion for the individual personal experience in the mortgage industry and how the regulations and requirements affect real people in real time. With this book I'm privileged and excited to share my knowledge and experience with you. After reading this book, you will have an understanding of the big corporations that loan money to homebuyers, what other options you have and how to navigate government regulations and requirements to your advantage. I feel that an educated consumer is my best customer and I am happy to share these mortgage tools and tips with you in the hopes that you educate yourself and find the best mortgage and the mortgage professional that is right for you. In addition, I want you to know what to expect, what to ask, and, who to ask to get the answers you want and to understand what those answers really mean. With each chapter I will guide you through the mortgage process, from choosing between different loan types, to understanding the difference between a Good Faith Estimate and an Itemized Fee Worksheet, to the necessity of submitting certain documents in a particular method, and finally how to enter Closing Day stress-free and knowing that you have gotten the mortgage that makes the most financial sense for your future. The goal is to help you get the best mortgage possible for your individual needs and get to closing on time, stress free!

Wittgenstein's Metaphilosophy Paul Horwich.2012-12-13 Paul Horwich presents a bold new interpretation of Wittgenstein's later work. He argues that it is Wittgenstein's radically anti-theoretical metaphilosophy - and not his identification of the meaning of a word with its use - that underpins his discussions of specific issues concerning language, the mind, mathematics, knowledge, art, and religion.

Contextual Teaching and Learning Elaine B. Johnson.2002 Contextual teaching and learning (CTL) is a system for teaching that is grounded in brain research. Brain research indicates that we learn best when we see meaning in new tasks and material, and we discover meaning when we are able to connect new information with our existing knowledge and experiences. Students learn best, according to neuroscience, when they can connect the content of academic lessons with the context of their own daily lives. Johnson discusses the elements of the brain-compatible contextual teaching and learning system: making meaningful connections;

investing school work with significance; self-regulated learning; collaboration; critical and creating thinking; nurturing the individual; reaching high standards; and using authentic assessment. Drawing on the practices of teachers in kindergarten through university, Johnson provides numerous examples of how to use each part of the CTL system.

Gotong Rojong Koentjaraningrat.2009-07 One of the most important, and at the same time most abused, terms in the Indonesian language is gotong rojong. Originally its usage was confined to the village sphere of Indonesian society, but during the past decade it has acquired an increasing currency among Indonesian political leaders and economic planners concerned with national problems. More and more frequently it has been employed in the formulation of prescriptions for, social and political relationships transcending the village level. In most cases, its usage, whether pertaining to activity at the village or national level has been vague and certainly varied, few writers (scholars or political leaders) pausing to give it anything approaching a clear definition. Where it has been defined, this has all too often been largely in terms of ideological requirements rather than reflecting the actual practices, such as those that Dr. Koentjaraningrat describes. This is one of the very few studies of this important process in Indonesian society to be based upon careful field research, an investigation undertaken by Dr. Koentjaraningrat in Central Java in 1958 and 1959. Publication of his monograph reflects the Cornell Modern Indonesia Project's interest in the considerable changes that have taken place at the village level in Indonesia as a consequence of the impact of three and a half years of Japanese occupation, four years of struggle for independence, and the subsequent decade of rapid social, economic, and political movement. We feel that Dr. Koentjaraningrat's study is a significant addition to the all too meager store of data based upon actual field work at the village level in the post-war period. Finally, I should like to express our deep gratitude to Mrs. Claire Holt for her translation of the manuscript, one which is fully sensitive to the nuances of Dr. Koentjaraningrat's exposition. - George McT. Kahin December 8, 1961

Joseph Conrad Robert D. Hamner.1990 Issues of racial discrimination, imperialist exploitation, and accuracy of observation have long interested Conrad's critics. As a European writing about imperialism in exotic lands, Conrad offered a vivid, but subjective account of the confrontations between the cultures and peoples of East and West. Though some in Africa have condemned his novels as racist, the books have been used as models for the work of recent generations of native writers. This collection of essays places Conrad's work under the scrutiny of an international array of scholars, who explore the response to Conrad in contemporary times, as well as during his own era.

Children Learn Mathematics .2008-01-01 Improving the quality of education is an important endeavor of educational policy and TAL aims to contribute to this. TAL is a project initiated by the Dutch Ministry of Education, Culture and Sciences, and carried out by the Freudenthal Institute (FI) of Utrecht University and the Dutch National Institute for Curriculum Development (SLO), in collaboration with the Rotterdam Center for Educational Services (CED). The quality of education can be improved in many ways. TAL proposes to do this by providing insights into the broad outline of the learning-teaching process and its internal coherence. It aims to be a support for teachers alongside mathematics textbook series. Furthermore, TAL can provide extra support for teachers if it is incorporated into a circle of implementation.

Modern Calculus and Analytic Geometry Richard A. Silverman.2014-04-15 A self-contained text for an introductory course, this volume places strong emphasis on physical applications. Key elements of differential equations and linear algebra are introduced early and are consistently referenced, all theorems are proved using elementary methods, and numerous worked-out examples appear throughout. The highly readable text approaches calculus from the student's viewpoint and points out potential stumbling blocks before they develop. A collection of more than 1,600 problems ranges from exercise material to exploration of new points of theory — many of the answers are found at the end of the book; some of them worked out fully so that the entire process can be followed. This well-organized, unified text is copiously illustrated, amply cross-referenced, and fully indexed.

The VNR Concise Encyclopedia of Mathematics W. Gellert.2012-12-06 It is commonplace that in our time science and technology cannot be mastered without the tools of mathematics; but the same applies to an ever growing extent to many domains of everyday life, not least owing to the spread of cybernetic methods and arguments. As a consequence, there is a wide demand for a survey of the results of mathematics, for an unconventional approach that would also make it possible to fill gaps in one's knowledge. We do not think that a mere juxtaposition of theorems or a collection of formulae would be suitable for this purpose, because this would over emphasize the symbolic language of signs and letters rather than the mathematical idea, the only thing that really matters. Our task was to describe mathematical interrelations as briefly and precisely

as possible. In view of the overwhelming amount of material it goes without saying that we did not just compile details from the numerous text-books for individual branches: what we were aiming at is to smooth out the access to the specialist literature for as many readers as possible. Since well over 700000 copies of the German edition of this book have been sold, we hope to have achieved our difficult goal. Colours are used extensively to help the reader. Important definitions and groups of formulae are on a yellow background, examples on blue, and theorems on red.

Using his trademark meticulous drawing, Professor Ching shows the relationship between fundamental elements of architecture through the ages and across cultural boundaries. By looking at these seminal ideas, Architecture: Form, Space, and Order encourages the reader to look critically at the built environment and promotes a more evocative understanding of architecture. In addition to updates to content and many of the illustrations, this new edition includes a companion CD-ROM that brings the book's architectural concepts to life through three-dimensional models and animations created by Professor Ching.

Rethinking School Mathematics Andrew Noyes.2007-05-21 Why is it that so many pupils are put off by maths, seeing it as uninspiring and irrelevant, and that so many choose to drop it as soon as they can? Why is it socially acceptable to be bad at maths? Does the maths curriculum really prepare pupils for life? This book presents some answers to these questions, helping teachers to think through their own attitudes to teaching and learning, and to work with pupils towards more effective and inspiring mathematical engagement. Part I of the book explores the nature of school mathematics - showing how the curriculum has been developed over the years, and how increasing effort has been devoted to improving the quality of mathematics teaching, with little apparent effect. Part II focuses on ways of thinking about classroom mathematics which take account of social, cultural, political and historical aspects. The chapters bring together a collection of activities, resources and discussion which will help teachers develop new ways of teaching and learning maths. This book will be essential reading for all maths teachers, including maths specialists on initial teacher training courses.

Asian Godfathers Joe Studwell.2010-09-03 40 or 50 families control the economies of Hong Kong, Singapore, Thailand, the Philippines and Indonesia. Their interests range from banking to property, from shipping to sugar, from vice to gambling. 13 of the 50 richest families in the world are in South East Asia yet they are largely unknown outside confined business circles. Often this is because they control the press and television as well as everything else. How do they do it? What are their secrets? And is it good news or bad for the places where they operate? Joe Studwell explosively lifts the lid on a world of staggering secrecy and shows that the little most people know is almost entirely wrong.
