**Buyology** Martin Lindstrom. 2010-02-02 NEW YORK TIMES BESTSELLER • “A fascinating look at how consumers perceive logos, ads, commercials, brands, and products.”—Time How much do we know about why we buy? What truly influences our decisions in today's message-cluttered world? In

Buyology, Martin Lindstrom presents the astonishing findings from his groundbreaking three-year, seven-million-dollar neuromarketing study—a cutting-edge experiment that peered inside the brains of 2,000 volunteers from all around the world as they encountered various ads, logos, commercials, brands, and products. His startling results shatter much of what we have long believed about what captures our interest—and drives us to buy. Among the questions he explores: • Does sex actually sell? • Does subliminal advertising still surround us? • Can “cool” brands trigger our mating instincts? • Can our other senses—smell, touch, and sound—be aroused when we see a product? Buyology is a fascinating and shocking journey into the mind of today's consumer that will captivate anyone who's been seduced—or turned off—by marketers' relentless attempts to win our loyalty, our money, and our minds.

*Archives for the 21st Century* Great Britain: Ministry of Justice, Great Britain Department for Culture, Media and Sport, Great Britain Department for Communities and Local Government. 2009-11-24 Publicly funded archive services have a vital role within the communities they serve to contribute to local democracy, strong and cohesive communities, social policy, education, research, history and culture. This document sets out the strategic vision for the sustainable development of a vigorous, publicly funded archive sector across England and Wales. It replaces the Government policy on archives that was issued by the Lord Chancellor in 1999 (Cm. 4516, ISBN 9780101451628) and focuses on actions for publicly funded archives while acknowledging that private archives remain vital to the archival health of the nation. Section 1 outlines how the landscape in which archive services operate has changed: large organisations now keep most, if not all, of their information in electronic form. Section 2 provides a vision of the true potential of publicly funded archives. Section 3 outlines the challenges facing archive services in the delivery of their core task of preserving authentic information and helping people to access and understand the past. Section 4 sets out five key recommendations: develop bigger and better services in partnership; strengthened leadership and a responsive, skilled workforce; co-ordinated response to the growing challenge of managing digital information; comprehensive online access for archive discovery through catalogues and to digitised archive content by citizens at a time and place that suits them; active participation in cultural and learning partnerships promoting a sense of identity and place within the community. Section 5 highlights the need for concerted action by all parties connected with the archive sector to ensure a sustainable future.

**Original Copies** Bianca Bosker.2013-01-31 A 108-meter high Eiffel Tower rises above Champs Elysées Square in Hangzhou. A Chengdu residential complex for 200,000 recreates Dorchester, England. An ersatz Queen's Guard patrols Shanghai's Thames Town, where pubs and statues of Winston Churchill abound. Gleaming replicas of the White House dot Chinese cities from Fuyang to Shenzhen. These examples are but a sampling of China's most popular and startling architectural movement: the construction of monumental themed communities that replicate towns and cities in the West. *Original Copies* presents the first definitive chronicle of this remarkable phenomenon in which entire townships appear to have been airlifted from their historic and geographic foundations in Europe and the Americas, and spot-welded to Chinese cities. These copycat constructions are not theme parks but thriving communities where Chinese families raise children, cook dinners, and simulate the experiences of a pseudo-Orange County or Oxford. In recounting the untold and evolving story of China's predilection for replicating the greatest architectural hits of the West, Bianca Bosker explores what this unprecedented experiment in "duplitecture" implies for the social, political, architectural, and commercial landscape of contemporary China. With her lively, authoritative narrative, the author shows us how, in subtle but important ways, these homes and public spaces shape the behavior of their residents, as they reflect the achievements, dreams, and anxieties of those who inhabit them, as well as those of their developers and designers. From Chinese philosophical perspectives on copying to twenty-first century market forces, Bosker details the factors giving rise to China's new breed of building. Her analysis draws on insights from the world's leading architects, critics and city planners, and on interviews with the residents of these developments.

**Mathematicians of the World, Unite!** Guillermo Curbera.2009-02-23 This vividly illustrated history of the International Congress of Mathematicians — a meeting of mathematicians from around the world held roughly every four years — acts as a visual history of the 25 congresses held between 1897 and 2006, as well as a story of changes in the culture of mathematics over the past century. Because the congress is an international meeting, looking at its history allows us a glimpse into the effect of wars and strained relations between nations on the scientific community.

**World Development Report 2016** World Bank Group.2016-01-14 Digital technologies are spreading rapidly, but digital dividends--the broader benefits of faster growth, more jobs, and better services--are not. If more than 40 percent of adults in East Africa pay their utility bills using a mobile phone, why can't others around the world do the same? If 8 million entrepreneurs in China--one third of them women--can use an e-commerce platform to export goods to 120 countries, why can't entrepreneurs elsewhere achieve the same global reach? And if India can provide unique digital identification to 1 billion people in five years, and thereby reduce corruption by billions of dollars, why can't other countries replicate its success? Indeed, what's holding back countries from realizing the profound and transformational effects that digital technologies are supposed to deliver? Two main reasons. First, nearly 60 percent of the world's population are still offline and can't participate in the digital economy in any meaningful way.

Second, and more important, the benefits of digital technologies can be offset by growing risks. Startups can disrupt incumbents, but not when vested interests and regulatory uncertainty obstruct competition and the entry of new firms. Employment opportunities may be greater, but not when the labor market is polarized. The internet can be a platform for universal empowerment, but not when it becomes a tool for state control and elite capture. The World Development Report 2016 shows that while the digital revolution has forged ahead, its 'analog complements'--the regulations that promote entry and competition, the skills that enable workers to access and then leverage the new economy, and the institutions that are accountable to citizens--have not kept pace. And when these analog complements to digital investments are absent, the development impact can be disappointing. What, then, should countries do? They should formulate digital development strategies that are much broader than current information and communication technology (ICT) strategies. They should create a policy and institutional environment for technology that fosters the greatest benefits. In short, they need to build a strong analog foundation to deliver digital dividends to everyone, everywhere.
