The Norton History of the Human Sciences Roger Smith.1997 A comprehensive history of the human sciences -- psychology, sociology, anthropology, economics, and political science -- from their precursors in early human culture to the present.This erudite yet accessible volume in Norton's highly praised History of Science series tracks the long and circuitous path by which human beings came to see themselves and their societies as scientific subjects like any other. Beginning with the Renaissance's rediscovery of Greek psychology, political philosophy, and ethics, Roger Smith recounts how the human sciences gradually organized themselves around a scientific conception of psychology, and how this trend has continued to the present day in a circle of interactions between science and ordinary life, in which the human sciences have influenced and been influenced by popular culture.

Darwin's Dangerous Idea Daniel C. Dennett.2014-07-01 In a book that is both groundbreaking and accessible, Daniel C. Dennett, whom Chet Raymo of The Boston Globe calls one of the most provocative thinkers on the planet, focuses his unerringly logical mind on the theory of natural selection, showing how Darwin's great idea transforms and illuminates our traditional view of humanity's place in the universe. Dennett vividly describes the theory itself and then extends Darwin's vision with impeccable arguments to their often surprising conclusions, challenging the views of some of the most famous scientists of our day.

The Situational Mentor Gill Lane.2016-02-24 Because the mentoring process involves a number of distinct stages, a wide range of skills are needed throughout the process and these skills are situational. In other words, a skilled mentor understands the principles of mentoring, but is also able to use appropriate skills according to the person with whom they are working and the stage they have reached in the relationship. In addition, different types of mentoring programme will demand a skills set particular to each. As with many other areas of development, a mix of the theoretical and the practical is needed to ensure that programmes and relationships achieve their potential. In The Situational Mentor: An International Review of Competences and Capabilities in Mentoring, David Clutterbuck and Gill Lane have brought together contributions from leading international academics and practitioners to define the key skills involved in mentoring and explore how these may be tailored to ensure a successful outcome in all instances.

Living in a Dangerous Climate Renée Hetherington. 2012-04-30 *Living in a Dangerous Climate* provides a journey through human and Earth history, showing how a changing climate has affected human evolution and society. Is it possible for humanity to evolve quickly, or is slow, gradual, genetic evolution the only way we change? Why did all other Homo species go extinct while Homo sapiens became dominant? How did agriculture, domestication and the use of fossil fuels affect humanity's growing dominance? Do today's dominant societies – devoted as they are to Darwinism and 'survival of the fittest' – contribute to our current failure to meet the hazards of a dangerous climate? Unique and thought provoking, the book links scientific knowledge and perspectives of evolution, climate change and economics in a way that is accessible and exciting for the general reader. The book is also valuable for courses on climate change, human evolution and environmental science.

The Extraction State Charles Blanchard. 2021-01-12 The history of the United States of America is also the history of the energy sector. Natural gas provides the fuel that allows us to heat our homes in winter and cool them in summer with the touch of a button or turn of a dial—when the industry runs smoothly. From the oil crisis of the 1970s to the fall of Enron and the California electricity crisis at the turn of the century to contemporary issues of hydraulic fracking, poorly conceived government policies have sometimes left us shivering, stranded, or with significantly lighter wallets. In this expansive narrative, Charles Blanchard traces the rise of natural gas and the regulatory missteps that nearly ruined the market. Beginning in the 1880s, *The Extraction State* explains how the New Deal regulatory compact came together in the 1920s, even before the Great Depression, and how it fell apart in the 1970s. From there, the book dissects the policies that affect us today, and explores where we might be headed in the near future.

Theistic Evolution J. P. Moreland, Stephen C. Meyer, Christopher Shaw, Ann K. Gauger, Wayne Grudem. 2020-06-20 Winner of the ECPA Book of the Year Award for Bible Reference Works Many prominent Christians insist that the church must yield to contemporary evolutionary theory and therefore modify traditional biblical ideas about the creation of life. They argue that God used—albeit in an undetectable way—evolutionary mechanisms to produce all forms of life. Featuring two dozen highly credentialed scientists, philosophers, and theologians from Europe and

North America, this volume contests this proposal, documenting evidential, logical, and theological problems with theistic evolution—making it the most comprehensive critique of theistic evolution yet produced. Explains why theistic evolution is not congruent with a biblical worldview Features nineteen essays written by well-known experts in their fields Designed to be used as a textbook for courses on religion and evolution Accessible for those without expertise in the subject

Did Darwin Write the Origin Backwards? Elliott Sober.2011-03-31 Is it accurate to label Darwin's theory the theory of evolution by natural selection, given that the concept of common ancestry is at least as central to Darwin's theory? Did Darwin reject the idea that group selection causes characteristics to evolve that are good for the group though bad for the individual? How does Darwin's discussion of God in *The Origin of Species* square with the common view that he is the champion of methodological naturalism? These are just some of the intriguing questions raised in this volume of interconnected philosophical essays on Darwin. The author's approach is informed by modern issues in evolutionary biology, but is sensitive to the ways in which Darwin's outlook differed from that of many biologists today. The main topics that are the focus of the book—common ancestry, group selection, sex ratio, and naturalism—have rarely been discussed in their connection with Darwin in such penetrating detail. Author Professor Sober is the 2008 winner of the Prometheus Prize. This biennial award, established in 2006 through the American Philosophical Association, is designed to honor a distinguished philosopher in recognition of his or her lifetime contribution to expanding the frontiers of research in philosophy and science. This insightful collection of essays will be of interest to philosophers, biologists, and laypersons seeking a deeper understanding of one of the most influential scientific theories ever propounded.

Statistics Richard A. Johnson,Gouri K. Bhattacharyya.2019-01-30 *Statistics: Principles and Methods, 8th Edition* provides students and business professionals with a comprehensive introduction to statistics concepts, terminology, and methods with a wide array of practical applications. Real-world data provides an easily relatable frame of reference, while numerous examples reinforce key ideas and demonstrate critical concepts to help ease student comprehension. Designed for those seeking a highly practical introduction to statistical measurement, reasoning, and analysis, this book requires no specific mathematical background and leaves derivations behind in favor of logic, reasoning, and modern statistics software. Concepts are introduced first in a real-life setting to illustrate immediate relevancy, and are subsequently expanded to relate underlying mechanisms, limitations, and further applications. An emphasis on the relationship between validity and assumptions underscores the importance of critical thinking and the use of appropriate models while instilling thoughtful habits that lead to accuracy in interpretation. Going beyond the typical introductory text to keep the focus on application, this book gives students a deeper understanding of statistics as it is used every day across disciplines and industries.

Bond and anchorage of embedded reinforcement: Background to the fib Model Code for Concrete Structures 2010 fib - Fédération internationale du béton.2014-05-01 As part of the preparation for the fib Model Code for Concrete Structures 2010, task group 4.5 Bond Models undertook a major review of rules for bond and anchorage of reinforcement in the CEB-FIP Model Code 1990. This bulletin presents the outcome of that review, describes the rationale for the revisions and presents the evidence on which the revisions are based. The principle changes in MC2010 include raising the limit on concrete strength that may be used when determining bond resistance to 110MPa, introduction of a coefficient η_4 to cater for different reinforcement Classes, and coverage of new construction materials including epoxy coated and headed bars. The format of design rules has been changed to permit more rational treatment of confinement from concrete cover and transverse reinforcement, the contribution of end hooks and bends for tension bars, and end bearing to compression laps. New guidance is provided covering a range of construction techniques and service environments and the influence of long term degradation. Analyses of various aspects of detailing on

performance of laps and anchorages have resulted in discontinuation of the 'proportion lapped' factor α_6 , alterations to requirements of transverse reinforcement at laps, and have resolved inconsistencies in provisions for bundled bars between major national codes. Apparent inconsistencies in existing rules for lapped joints and anchorages and between the local bond/slip model and design rules are also resolved, thus allowing integration of application rules and modelling. Finally, the basis for an attempt to introduce simple detailing rules for laps and anchorages is described.

The Eugenic Mind Project Robert A. Wilson.2017-12-22 An examination of eugenic thinking past and present, from forced sterilization to prenatal screening, drawing on experience with those who survived eugenics. Part science and part social movement, eugenics emerged in the late nineteenth century as a tool for human improvement. In response to perceived threats of criminality, moral degeneration, feeble-mindedness, and "the rising tide of color," eugenic laws and social policies aimed to better the human race by regulating reproductive choice through science and technology. In this book, Rob Wilson examines eugenic thought and practice—from forced sterilization to prenatal screening—drawing on his experience working with eugenics survivors. Using the social sciences' standpoint theory as a framework to understand the intersection of eugenics, disability, social inclusiveness, and human variation, Wilson focuses on those who have lived through a eugenic past and those confronted by the legacy of eugenic thinking today. By doing so, he brings eugenics from the distant past to the ongoing present. Wilson discusses such topics as the conceptualization of eugenic traits; the formulation of laws regulating immigration and marriage and requiring sexual sterilization; the depiction of the targets of eugenics as "subhuman"; the systematic construction of a concept of normality; the eugenic logic in prenatal screening and contemporary bioethics; and the incorporation of eugenics and disability into standpoint theory. Individual purchasers of this book will receive free access to the documentary *Surviving Eugenics*, available at EugenicsArchive.ca/film.

History of Bilingual Education in the Northern Territory Brian Clive Devlin,Samantha Disbray,Nancy Regine Friedman Devlin.2017-03-07 This book provides the first detailed history of the Bilingual Education Program in the Northern Territory of Australia. This ambitious and innovative program began in 1973 and at different times it operated in English and 19 Aboriginal languages in 29 very remote schools. The book draws together the grassroots perspectives of Indigenous and non-Indigenous practitioners and researchers. Each chapter is based on rich practitioner experience, capturing bottom-up aspirations, achievements and reflections on this innovative, yet largely undocumented language and education program. The volume also makes use of a significant collection of 'grey literature' documents to trace the history of the program. An ethnographic approach has been used to integrate practitioner accounts into the contexts of broader social and political forces, education policy decisions and on-the-ground actions. Language in education policy is viewed at multiple, intersecting levels: from the interactions of individuals, communities of practice and bureaucracy, to national and global forces. The book offers valuable insights as it examines in detail the policy settings that helped and hindered bilingual education in the context of minority language rights in Australia and elsewhere.

Christian Apologetics Douglas Groothuis.2022-02-08 People are hungry for hope. They want to

understand our human condition—its origin, nature, purpose, and destiny. The Christian faith offers hope for individuals and the entire universe, grounded in absolute truth. But how can we know that Christianity is true? And how can Christians confidently present their beliefs in the face of doubts and competing views? In this comprehensive text, Douglas Groothuis makes a clear and rigorous case for Christian theism. Demonstrating how apologetics must be both rational and winsome, he addresses the most common questions and objections people raise regarding Christianity. After laying a foundation with the biblical basis for apologetics, apologetic method, and a defense of objective truth, he presents key arguments for the reality of God, a case for the credibility of Jesus, and evidence for the resurrection. Groothuis also evaluates alternative views and responds to challenges such as religious pluralism and the problem of evil. The second edition of this landmark work has been updated throughout to address current issues and sources. It includes new chapters on topics such as doubt and the hiddenness of God, the atonement, the church, and lament as a Christian apologetic. To know God in Christ, Groothuis argues, means that we desire to make Christian truth available to others in the most compelling form possible. Students, ordinary Christians, and seasoned philosophers will all find a wise guide for this endeavor in *Christian Apologetics*.

Darwin's Doubt Stephen C. Meyer. 2013-06-18 When Charles Darwin finished *The Origin of Species*, he thought that he had explained every clue, but one. Though his theory could explain many facts, Darwin knew that there was a significant event in the history of life that his theory did not explain. During this event, the “Cambrian explosion,” many animals suddenly appeared in the fossil record without apparent ancestors in earlier layers of rock. In *Darwin's Doubt*, Stephen C. Meyer tells the story of the mystery surrounding this explosion of animal life—a mystery that has intensified, not only because the expected ancestors of these animals have not been found, but because scientists have learned more about what it takes to construct an animal. During the last half century, biologists have come to appreciate the central importance of biological information—stored in DNA and elsewhere in cells—to building animal forms. Expanding on the compelling case he presented in his last book, *Signature in the Cell*, Meyer argues that the origin of this information, as well as other mysterious features of the Cambrian event, are best explained by intelligent design, rather than purely undirected evolutionary processes.

The Oxford Handbook of Affective Computing Rafael A. Calvo, Sidney D'Mello, Jonathan Matthew Gratch, Arvid Kappas. 2015 *The Oxford Handbook of Affective Computing* is a definitive reference in the burgeoning field of affective computing (AC), a multidisciplinary field encompassing computer science, engineering, psychology, education, neuroscience, and other disciplines. AC research explores how affective factors influence interactions between humans and technology, how affect sensing and affect generation techniques can inform our understanding of human affect, and on the design, implementation, and evaluation of systems involving affect at their core. The volume features 41 chapters and is divided into five sections: history and theory, detection, generation, methodologies, and applications. Section 1 begins with the making of AC and a historical review of the science of emotion. The following chapters discuss the theoretical underpinnings of AC from an interdisciplinary viewpoint. Section 2 examines affect detection or recognition, a commonly investigated area. Section 3 focuses on aspects of affect generation, including the synthesis of emotion and its expression via facial features, speech, postures, and gestures. Cultural issues are also discussed. Section 4 focuses on methodological issues in AC research, including data collection techniques, multimodal affect databases, formats for the representation of emotion, crowdsourcing techniques, machine learning approaches, affect elicitation techniques, useful AC tools, and ethical issues. Finally, Section 5 highlights applications of AC in such domains as formal and informal learning, games, robotics, virtual reality, autism research, health care, cyberpsychology, music, deception, reflective writing, and cyberpsychology. This compendium will prove suitable for use as a textbook and serve as a valuable resource for everyone with an interest in AC.--

Sisters and the English Household Anne D. Wallace. 2018-09-15 *Sisters and the English Household* revalues unmarried adult sisters in nineteenth-century English literature as positive figures of legal

and economic autonomy representing productive labor in the domestic space. As a crucial site of contested values, the adult unmarried sister carries the discursive weight of sustained public debates about ideals of domesticity in nineteenth-century England. Engaging scholarly histories of the family, and providing a detailed account of the 70-year Marriage with a Deceased Wife's Sister controversy, Anne Wallace traces an alternative domesticity anchored by adult sibling relations through Dorothy Wordsworth's journals; William Wordsworth's poetry; Mary Lamb's essay "On Needle-Work"; and novels by Jane Austen, Elizabeth Gaskell, Charles Dickens, Dinah Mulock Craik and George Eliot. Recognizing adult sibling relationships, and the figure of the adult unmarried sibling in the household, as primary and generative rather than contingent and dependent, and recognizing material economy and law as fundamental sources of sibling identity, *Sisters and the English Household* resets the conditions for literary critical discussions of sibling relations in nineteenth-century England.

Business Analysis, Requirements, and Project Management Karl Cox.2021-10-25 IT projects emerge from a business need. In practice, software developers must accomplish two big things before an IT project can begin: find out what you need to do (i.e., analyse business requirements)

and plan out how to do it (i.e., project management). The biggest problem in IT projects is delivering the wrong product because IT people do not understand what business people require. This practical textbook teaches computer science students how to manage and deliver IT projects by linking business and IT requirements with project management in an incremental and straightforward approach. *Business Analysis, Requirements, and Project Management: A Guide for Computing Students* presents an approach to analysis management that scales the business perspective. It takes a business process view of a business proposal as a model and explains how to structure a technical problem into a recognisable pattern with problem frames. It shows how to identify core transactions and model them as use cases to create a requirements table useful to designers and coders. Linked to the analysis are three management tools: the product breakdown structure (PBS), the Gantt chart, and the Kanban board. The PBS is derived in part from the problem frame. The Gantt chart emerges from the PBS and ensures the key requirements are addressed by reference to use cases. The Kanban board is especially useful in Task Driven Development, which the text covers. This textbook consists of two interleaving parts and features a single case study. Part one addresses the business and requirements perspective. The second integrates core project management approaches and explains how both requirements and management are connected. The remainder of the book is appendices, the first of which provides solutions to the exercises presented in each chapter. The second appendix puts together much of the documentation for the case study into one place. The case study presents a real-world business scenario to expose students to professional practice.

Evolution David Zeigler. 2014-04-14 *Evolution: Components and Mechanisms* introduces the many recent discoveries and insights that have added to the discipline of organic evolution, and combines them with the key topics needed to gain a fundamental understanding of the mechanisms of evolution. Each chapter covers an important topic or factor pertinent to a modern understanding of evolutionary theory, allowing easy access to particular topics for either study or review. Many chapters are cross-referenced. Modern evolutionary theory has expanded significantly within only the past two to three decades. In recent times the definition of a gene has evolved, the definition of organic evolution itself is in need of some modification, the number of known mechanisms of evolutionary change has increased dramatically, and the emphasis placed on opportunity and contingency has increased. This book synthesizes these changes and presents many of the novel topics in evolutionary theory in an accessible and thorough format. This book is an ideal, up-to-date resource for biologists, geneticists, evolutionary biologists, developmental biologists, and researchers in, as well as students and academics in these areas and professional scientists in many subfields of biology. Discusses many of the mechanisms responsible for evolutionary change Includes an appendix that provides a brief synopsis of these mechanisms with most discussed in greater detail in respective chapters Aids readers in their organization and understanding of the material by addressing the basic concepts and topics surrounding organic evolution Covers some topics not typically addressed, such as opportunity, contingency, symbiosis, and progress
