The Distributional Impacts of Trade Jakob Engel, Deeksha Kokas, Gladys Lopez-Acevedo, Maryla Maliszewska. 2021-06-09 Trade is a well-established driver of growth and poverty reduction. But changes in trade policy also have distributional impacts that create winners and losers. It is vital to understand and clearly communicate how trade affects economic well-being across all segments of the population, as well as how policies can more effectively ensure that the gains from trade are distributed more widely. *The Distributional Impacts of Trade: Empirical Innovations, Analytical Tools, and Policy Responses* provides a deeper understanding of the distributional effects of trade across regions, industries, and demographic groups within countries over time. It includes an overview (chapter 1); a review of innovations in empirical and theoretical work covering the impacts of trade at the subnational level (chapter 2); highlights from empirical case studies on Bangladesh, Brazil, Mexico, South Africa, and Sri Lanka (chapter 3); and a policy agenda to improve distributional outcomes from trade (chapter 4). This book comes at a time when the shock from COVID-19 (coronavirus) adds to an already uncertain trade policy environment in which the value of the multilateral trading system has been under increased scrutiny. A better understanding of how trade affects distributional outcomes can lead to more inclusive policies and support the ability of countries to maximize broad-based benefits from trade.

Rethinking the Environment for the Anthropocene Manuel Arias-Maldonado, Zev

Trachtenberg. 2019-01-03 This book brings together the most current thinking about the Anthropocene in the field of Environmental Political Theory ('EPT'). It displays the distinctive contribution EPT makes to the task of thinking through what 'the environment' means in this time of pervasive human influence over natural systems. Across its chapters the book helps develop the idea of 'socio-natural relations'—an idea that frames the environment in the Anthropocene in terms of the interconnected relationship between human beings and their surroundings. Coming from both well-established and newer voices in the field, the chapters in the book show the diversity of points of view theorists take toward the Anthropocene idea, and socio-natural relations more generally. However, all the chapters exemplify a characteristic of work in EPT: the self-conscious effort to provide normative interpretations that are responsive to scientific accounts. The Introduction explains the complicated interaction between science and EPT, showing how it positions EPT to consider the Anthropocene. And the Afterword, by a pioneer in the field, relates all the chapters to a perspective that has been deeply influential in EPT. This book will be of interest to scholars already engaged in EPT. But it will also serve as an introduction to the field for students of Political Theory,

Philosophy, Environmental Studies, and related disciplines, who will learn about the EPT approach from the Introduction, and then see it applied to the pressing question of the Anthropocene in the ensuing chapters. The book will also help readers interested in the Anthropocene from any disciplinary perspective develop a critical understanding of its political meanings.

Biohydrometallurgical Processes Satarupa Dey.2023-12-06 Extensive industrialization has led to an increased release of toxic metals into the soil and air. Industrial waste can include mine overburden, bauxite residue, and E waste, and these can serve as a source of valuable recoverable metals. There are relatively simple methods to recycle these wastes, but they require additional chemicals, are expensive, and generate secondary waste that causes environmental pollution. Biohydrometallurgical processing is a cost-effective and ecofriendly alternative where biological processes help conserve dwindling ore resources and extract metals in a nonpolluting way. Microbes can be used in metal extraction from primary ores, waste minerals, and industrial and mining wastes. Biohydrometallurgical Processes: Metal Recovery and Remediation serves as a useful guide for microbiologists, biotechnologists, and various industrialists dealing with mining, metallurgy, chemical engineering, and environmental sciences. Features: Examines advances in biohydrometallurgy, biomineralization, and bioleaching techniques Discusses the importance of bacteria in biohydrometallurgical processes and microbial interventions for waste cleanup and upgradation of minerals Presents the latest techniques for biosynthesis related to different metals, along with recent developments in alternative procedures using extremophiles and leaching bacteria

Evolutionary Perspectives on Environmental Problems Iver Mysterud.2017-07-05 The twenty-first century presents an increasing number of environmental problems, including toxic pollution, global warming, destruction of tropical forests, extinction of biological diversity, and depletion of natural resources. These environmental problems are generally due to human behavior, namely over-consumption of resources and overpopulation. Designing effective policies to address these problems requires a deep understanding of human behavior as well as ecology. This in turn requires considerations of human nature, and the evolutionary design of the human mind.Evolutionary research on human behavior has profound implications for the environmental sciences. The aim of this collection is to bring together a variety of chapters that show how and why. Part 1, Human Nature and Resource Conservation, addresses environmental problems from different evolutionary perspectives. Part 2, The Ecological Noble Savage Hypothesis, examines the notion that our environmental problems are due to Western culture, and that our ancestors and people in indigenous societies lived in harmony with nature until the corrupting influences of Western culture. Part 3, The Tragedy of the Commons, explores the conservation of common-pool or open-access natural resources, such as fisheries, forests, grazing lands, freshwater, and clean air. Part 4, The Evolution of Discounting and Conspicuous Consumption, looks at the problem of explaining why people are so ecologically short-sighted and why people in developed countries consume so many resources. Part 5, Overpopulation and Fertility Declines, addresses the evolution of human reproductive decisions. Part 6, Biophilia, aims to explain why people cherish nature as well as

destroy it. The goal of this volume is to introduce environmental thinkers to evolutionary perspectives on human behavior, and the new interdisciplinary sciences of evolutionary psychology and behavioral ecology. This reader aims to help bridge
