Nutrition in Contemporary Nursing Practice Marilyn L. Green, Joann Harry. 1981 Abstract: The principles and applications of nutrition science are comprehensively presented for basic nursing students or practicing nurses. The presentation is organized around 3 aspects of nutrition: basic facts; nutrient functions and utilization; and nutrition throughout the life cycle. Some of the specific topics covered include the food groups, eating patterns, digestion and absorption, and weight control. Nutrition care is discussed within the framework of the nursing process, and includes nutrition assessment, diagnosis, and nutrition support. The objectives, rationales, and results of dietary management are examined. The nurse's roles are defined; and the nurses's relationships to the dietitian and health care team are explored. Learning objectives, case histories, charts, and tables provide further educational support. Basic facts are related to their practical applications

throughout the text. (cj).
