WHO Guidelines on Tularaemia World Health Organization.2007-12-15 Tularaemia is a bacterial zoonotic disease of the northern hemisphere. The bacterium (*Francisella tularensis*) is highly virulent for humans and a range of animals such as rodents hares and rabbits. Humans can infect themselves by direct contact with infected animals by arthropod bites by ingestion of contaminated water or food or by inhalation of infective aerosols. There is no human-to-human transmission. In addition to its natural occurrence *F. tularensis* evokes great concern as a potential bioterrorism agent. *F. tularensis* subspecies *tularensis* is one of the most infectious pathogens known in human medicine. In order to avoid laboratory-associated infection safety measures are needed and consequently clinical laboratories do not generally accept specimens for culture. However since clinical management of cases depends on early recognition there is an urgent need for diagnostic services. This first edition of WHO Guidelines on tularaemia provides background information on the disease describes the current best practices for its diagnosis and treatments in humans suggests measures to be taken in case of epidemics and provides guidance on how to handle *F. tularensis* in the laboratory. The target audience includes clinicians laboratory personnel public health workers veterinarians and any other person with an interest in zoonoses.

The Fingerprint U. S. Department Justice. 2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.

In the Name of Science F. Barbara Orlans.1993-07-08 Few arguments in biomedical experimentation have stirred such heated debate in recent years as those raised by animal research. In this comprehensive analysis of the social, political, and ethical conflicts surrounding the use of animals in scientific experiments, Barbara Orlans judges both ends of the spectrum in this debate -- unconditional approval or rejection of animal experimentation -- to be untenable. Instead of arguing for either view, she thoughtfully explores the ground between the extremes, and convincingly makes the case for public policy reforms that serve to improve the welfare of laboratory animals without jeopardizing scientific endeavor. This book presents controversial issues in a balanced manner based on careful historical analysis and original research. Different mechanisms of oversight for animal experiments are compared and those that have worked well are identified. This compelling work will be of interest to biomedical scientists, ethicists, animal welfare advocates and other readers concerned with this critical issue.

Between Here and the Yellow Sea Nic Pizzolatto.2010-05-22 A debut collection of short fiction from this National Magazine Award in Fiction finalist. Set in a variety of Southern and Midwestern landscapes — from Missouri's Ha Ha Tonka State Park to a crop circle at a Minnesotan farm — the stories in 'Between Here and the Yellow Sea' excavate the ambiguous terrain of the human heart. With a forceful and compassionate voice, Pizzolatto finds beauty in loneliness as his characters attempt to bridge the gulfs between themselves and others, past and present, and, sometimes, between their inner and outer selves. In this both heartbreaking and humorous collection, we meet a base-jumping, samurai park ranger who parachutes off the St. Louis Arch; a stained glass artist who struggles over his masterpiece and learns through great loss what his true subject will be; and a religious elementary school teacher who tries to understand her rebellious, militant son. In the title story, which first appeared in the Atlantic Monthly, an orphaned young man and his former high school football coach set out to kidnap the coach's daughter from Los Angeles and bring her back to east Texas. With an assured, poignant voice, Pizzolatto places us at the crossroads of memory and desire, somewhere between here and the Yellow Sea.

Photo Manual and Dissection Guide of the Fetal Pig Fred Bohensky.2004-02-29 The Bohensky Dissection Series has been used successfully by more than 300,000 biology students nationwide. Each book in the series is

designed to guide the student through the study of anatomical structures. The books do this through the use of clearly marked photographs and illustrations. Accompanying text offers the student both easy-to-follow dissection instructions and factual information about the section under observation. At the end of each chapter there are tests which can be used for self-study or for grade course evaluation. Within the traditional dissection portion of a biology course, many programs include the sheep heart, eye, and brain. Within many of these guides, the author has incorporated photographs of these structures to more closely follow standard course curriculum. The author also provides important information on human organs such as the eye, ear, and heart. In this way, the student can better understand the role and function of these organs as they relate to human life processes. Add to this each book's large-size format, lay-flat spiral binding, and reasonable cost, and you can see why the Bohensky Dissection Series has become one of the most successful dissection guides used throughout this country's schools.
