Major Incident Medical Management and Support Advanced Life Support Group (ALSG).2019-01-04 The new edition of Major Incident Medical Management and Support is a vital component in the blended learning course from Advanced Life Support Group (ALSG), which aims to provide hospital staff at all levels with essential information on the preparation, management and support elements of dealing with casualties in a major incident. Split into five sections, each focuses on the elements requisite in preparing for, and responding, to a major incident. The first section discusses the epidemiology and incidences of major incidents and the structured approach to the hospital response. The second section contains the preparation required in planning for major incidents, including equipment and training. The third section covers the management of a major incident, concentrating on the clinical, nursing and management hierarchies. The fourth includes the various stages of support in a major incident, including declaring an incident and activating the plan, the reception, triage, definitive care and recovery phases of an incident. The final section focuses on special incidents which require additional consideration, including those involving hazardous chemicals, burns and children. Written in collaboration with the National Emergency Planning, Major Incident Medical Management and Support is an invaluable reference in the emergency department and beyond for staff needing to prepare for the rare, but inevitable, hospital major incidence response.

period. In Lyme, Connecticut, in 1965, Polly Murray, her husband, and their four children led an almost picture-perfect life. But Polly began to be plagued by mysterious ailments, and as the rest of her family started to experience similar symptoms, she knew something was terribly wrong. When doctor after doctor failed to explain what was happening to them, Polly was forced to confront disbelief, lack of caring, and, eventually, apathy on the part of the medical establishment, all the while suffering herself. Her personal investigation into the cause of her family's illness, which became as passionate as a detective's, eventually initiated a medical investigation that led to the 1982 discovery by Dr. Willy Burgdorfer of the dangerous bacteria that causes Lyme disease. Polly tells her tale from the viewpoint of a patient who was a pioneer in the medical recognition of Lyme disease. Lyme disease remains a poorly diagnosed, controversial illness. Lyme victims and their families can take hope from Polly's courageous and inspiring story.

But what does it take to eradicate a disease? This book takes a fresh look at the evolving concepts of disease eradication, influenced by scientific advances, field experience, societal issues, and economic realities. A diverse

Attachment in Social Networks L.W.C. Tavecchio,M.H. van

IJzendoorn.1987-02-01 The main objective of the research presented in this book is to broaden the scope of attachment theory by stressing the importance of a social network approach to the study of attachment. This approach forms the integrating theme of this volume, as is testified by various studies of attachment as it develops in an extended rearing context over and beyond the limits of the traditional mother-child dyad. In this connection attention is paid to the importance of sibling relationships, attachment relationships with professional caregivers, the role of the father in caring and rearing young children, and the (short-term and long-term) effects on attachment quality of maternal employment in infancy. Also, the cross-cultural validity of Ainsworth's Strange Situation is discussed, with reference to the USA, Sweden, Israel, Japan, The Netherlands, etc. In adopting a social network approach, the attachment theory proves to be a particularly useful instrument for reflecting on the consequence of social change (maternal employment, symmetrical families, socialisation of childrearing) for child development.

Differentiation of Self Peter Titelman.2014-12-05 Bowen theory views the family as an emotional unit. The family is a natural system that has evolved, like all living systems. The elegance and unity of the concept of differentiation of self, and of Bowen theory in its entirety, is that they describe the basis of individual functioning in relation to others within the emotional systems of family, occupation, community, and larger society. This volume consists of essays elucidating and applying differentiation of self, the central concept of Bowen family systems theory and therapy. The purpose of the volume is fourfold: • to describe the historical evolution of differentiation of self • to analyze the complex dimension of this concept as the integrating cornerstone of Bowen theory • to present applications of the concept for both the therapist/coach and in clinical practice • to examine the problems and possibilities of researching differentiation of self The largest part of this volume is the presentation of in-depth case studies of clients or therapists in their efforts to differentiate or define self. This provides an understanding of the what and how that go into the differentiation of self. Contributed to by professionals who have studied, applied, and taught Bowen theory in their own lives, practices, educational settings, and training settings, this volume is a must-have for any therapist/coach working within a systems perspective.
