The Language of Technical Communication is a collaborative effort with fifty-two expert contributors, all known for their depth of

knowledge. You will probably recognize many of their names, and you will probably want to learn more about the ones who are new to you. Each contributed term has a concise definition, an importance statement, and an essay that describes why technical communicators need to know that term. You will find well understood terms, such as content reuse and minimalist design, alongside new terms, such as the Internet of Things and augmented reality.
