History Of Botany (1530-1860) Julius Von Sachs.2013-04-16 Julius von Sachs (1832-1897) was a German botanist from Breslau, Prussian Silesia. In Sachs 'History of Botany' he has made it his chief object to discover the first dawning of scientific ideas and to follow them as they developed into comprehensive theories, for in this lies the true history of a science. Sachs singles out those men as the true heroes of our story who not only established new facts, but gave birth to fruitful thoughts and made a speculative use of empirical material.

The Dark Side of Knowledge Cornel Zwierlein.2016-06-10 Thoroughly researched contributions from conferences at Harvard and Paris on coping with ignorance in late medieval and early modern administrative practices, science, literature and the arts, are tightly connected by a new theoretical framework on how to historicize ignorance.

The Benthic Boundary Layer I. McCave.2012-12-06 The Conference on the Benthic Boundary Layer was held under the auspices of the NATO Science Committee as part of its continuing effort to promote the useful progress of science through international cooperation. Science Committee Conferences are deliberately designed to focus attention on unsolved problems, with carefully selected participants invited to provide complementary expertise from a variety of relevant disciplines. Through intensive discussion in small groups they seek to reach a consensus on assessments and recommendations for future research emphasis, which it is hoped will be of value to the larger scientific community. The subjects treated over the past few years have been as varied as science itself-e.g., computer software engineering, chemical catalysis, and materials and energy research. The present effort evolved from informal discussions between marine geologists, chemists, and biologists which underlined the desirability of improved communication among those concerned with the benthic layer. In both scientific and technological terms this is an exciting frontier, rich in promise but poorly understood at present. It is particularly striking to realize that there are at least as many definitions of the benthic layer as there are disciplines involved, and it seemed clear that there was much to be gained by a detailed exchange of views on research capabilities, trends, and priorities. The results of the meeting appear to have confirmed the hopes of the sponsors.

The Global Carbon Cycle Martin Heimann.2011-12-16 This book is the outcome of a NAill Advanced Study Institute on the contemporary global carbon cycle, held in n Ciocco, Italy, September 8-20, 1991. The motivation for this ASI originated from recent controversial findings regarding the relative roles of the ocean and the land biota in the current global balance of atmospheric carbon dioxide. Consequently, the purpose of this institute was to review, among leading experts in the field, the multitude of known constraints on the present day global carbon cycle as identified by the fields of meteorology, physical and biological oceanography, geology and terrestrial biosphere sciences. At the same time the form of an Advanced Study Institute was chosen, thus providing the opportunity to convey the information in tutorial form across disciplines and to young researchers entering the field. The first three sections of this book contain the lectures held in II Ciocco. The first section reviews the atmospheric, large-scale global constraints on the present day carbon cycle including the emissions of carbon dioxide from fossil fuel use and it provides a brief look into the

past. The second section discusses the role of the terrestrial biosphere and the third the role of the ocean in the contemporary global carbon cycle.

Europe and the Black Sea Region Dominik Gutmeyr.2019-05 When the scientific study of the Black Sea Region began in the late 18th and early 19th centuries, initially commissioned by adjacent powers such as the Habsburg and the Russian empires, this terra incognita was not yet considered part of Europe. The eighteen chapters of this volume show a broad range of thematic foci and theoretical approaches - the result of the enormous richness of the European macrocosm and the BSR. The microcosms of the many different case studies under scrutiny, however, demonstrate the historical dimension of exchange between the allegedly opposite poles of 'East' and 'West' and underscore the importance of mutual influences in the development of Europe and the BSR.

A Climate of Injustice J. Timmons Roberts,Bradley Parks.2006-11-22 The global debate over who should take action to address climate change is extremely precarious, as diametrically opposed perceptions of climate justice threaten the prospects for any long-term agreement. Poor nations fear limits on their efforts to grow economically and meet the needs of their own people, while powerful industrial nations, including the United States, refuse to curtail their own excesses unless developing countries make similar sacrifices. Meanwhile, although industrialized countries are responsible for 60 percent of the greenhouse gas emissions that contribute to climate change, developing countries suffer the worst and first effects of climate-related disasters, including droughts, floods, and storms, because of their geographical locations. In *A Climate of Injustice*, J. Timmons Roberts and Bradley Parks analyze the role that inequality between rich and poor nations plays in the negotiation of global climate agreements. Roberts and Parks argue that global inequality dampens cooperative efforts by reinforcing the structuralist worldviews and causal beliefs of many poor nations, eroding conditions of generalized trust, and promoting particularistic notions of fair solutions. They develop new measures of climate-related inequality, analyzing fatality and homelessness rates from hydrometeorological disasters, patterns of emissions inequality, and participation in international environmental regimes. Until we recognize that reaching a North-South global climate pact requires addressing larger issues of inequality and striking a global bargain on environment and development, Roberts and Parks argue, the current policy gridlock will remain unresolved.

Rachel Carson Karen F. Stein.2013-02-11 Karen F. Stein University of Rhode Island, Kingston, USA Rachel Carson is the twentieth century's most significant environmentalist. Her books about the sea blend science and poetry as they invite readers to share her celebration of the ocean's wonders. *Silent Spring*, her graphic and compelling exposé of the damage caused by the widespread aerial spraying of persistent organic pesticides such as DDT, opened our eyes to the interconnectedness of all living beings and the ecological systems we inhabit. Carson's work challenges our belief that science and technology can control the natural world, asks us to recognize our place in the world around us, and inspires us to treat the earth respectfully. She calls us to rekindle our sense of wonder at nature's power and beauty, and to tread lightly on the earth so that it will continue to sustain us and our descendants. This book guides readers on a journey through Carson's life and work, considers Carson's legacies, and points to some of the continuing challenges to sustainability. It provides a listing of resources for reading, learning, or teaching about the environment, about nature writing, and about Carson and the crucial issues she addressed.

Territorial Use Rights in Marine Fisheries Francis T. Christy,Food and Agriculture Organization of

the United Nations.1982 Territorial use rights in fisheries (TURFs) have existed for centuries. They are widely available for sedentary resources. In addition, however, they have appeared in a number of marine fisheries in traditional communities and are also being acquired, legally or extra-legally, for such techniques as floating fish aggregation devices and other forms of fixed gear. TURFs provide interesting opportunities for dealing with two major aspects of fisheries management - efficient production of net benefits and equitable distribution of benefits. Further exploration of the possible adoption of TURFs as a means for management seem desirable. This paper explores some of the definitional elements of TURFs and the distinctions between territorial rights and common property. It also exercises some of the conditions that may have an effect on the creation and maintenance of TURFs. And it discusses briefly some of the implications for equitable distribution of benefits.

New Rural Geographies in Europe Annett Steinführer,Anna-Barbara Heindl,Ulrike Grabski-Kieron,Anja Reichert-Schick. This edited volume is the sixth publication of the series Rural areas: Issues of local and regional development. It aims at intensifying scholarly exchange on topical questions of social, political, economic and landscape-related transformations of rural areas in Germany and Europe. Europe is a meaningful frame and research topic for rural geography. This edited volume assembles 14 contributions from various countries that shed light on the variety, as well as the differences and commonalities of rural regions in Europe. The volume aims at initiating general reflections about common development mechanisms and structures in the European context in contrast with specific national conditions and path dependencies. By assembling both regional and country case studies as well as cross-national comparisons, the anthology provides a sound basis for future European research in rural geography. It pleads for more cross-national and comparative approaches.

A World of Innovation Gerhard Holzer,Valerie Newby,Petra Svatek.2015-02-27 Gerhard Mercator (1512-1594) was the most important cartographer and globemaker of the 16th century. He is particularly remembered for his publication Atlas sive Cosmographicae Meditationes de Fabrica Mundi et Fabricati Figura (1595), and for his specific cylindrical map projection (1569), which is still used widely today. This book brings together the latest research on Mercator with a view to his sources and his relationships with other scientific disciplines and cartographers of his time, as well as his role in the wider worlds of Renaissance cartography and Humanism.

Fishing Villages in Tokugawa, Japan Arne Kalland.1995-01-01 What is more, Japan's fishing villages played a significant role in Japan's economic development. In particular, during the Tokugawa period (1600-1868), they acted as key commercial links between the castle towns and dispersed farming communities.

A World Environment Organization Frank Biermann.2017-03-02 In recent years, the debate on the establishment of a new international agency on environmental protection - a 'World Environment Organization' - has gained substantial momentum. Several countries, including France and Germany, as well as a number of leading experts and senior international civil servants have openly supported

the creation of such a new international organization. However, a number of critics have also taken the floor and brought forward important objections. This book presents a balanced selection of articles of the leading participants in this debate, including both major supporters and opponents of creating a World Environment Organization. The volume is especially relevant to students and scholars of international relations, environmental policy and international law, as well as to practitioners of diplomacy, international negotiations, and environmental policy making.

Introductory Dynamical Oceanography Stephen Pond,George L. Pickard.2013-10-22 'Introductory Dynamical Oceanography' 2nd ed provides an introduction to Dynamical Physical Oceanography at a level suitable for senior year undergraduate students in the sciences and for graduate students entering oceanography. It aims to present the basic objectives, procedures and successes and to state some of the present limitations of dynamical oceanography and its relations to descriptive physical oceanography. The first edition has been thoroughly revised and updated and the new work includes reference to the Practical Salinity Scale 1978, the International Equation of State 1980 and the beta-spiral technique for calculating absolute currents from the density distribution. In addition the description of mixed-layer models has been updated and the chapters on Waves and on Tides have been substantially revised and enlarged, with emphasis on internal waves in the Waves chapter. While the text is self-contained readers are recommended to acquaint themselves with the general aspects of descriptive (synoptic) oceanography in order to be aware of the character of the ocean which the dynamical oceanographer is attempting to explain by referring to Pickard and Emery's 'Descriptive Physical Oceanography' 4th edition.

Cancer of Unknown Primary Alwin Krämer,Harald Löffler.2015-11-03 This book presents an up-to-date and thorough overview of cancer of unknown primary, encompassing topics ranging from epidemiology, tumor biology, and prognostic factors through to the most recent diagnostic and therapeutic advances. All aspects of management are covered, including radiological, nuclear medicine, and pathological diagnosis, site-specific therapies, platinum-based combination chemotherapy, radiotherapy, and novel targeted treatments. Clear guidance is offered on diagnosis of the tissue of origin by means of gene expression and micro-RNA analyses and its therapeutic implications. Detailed directions are also provided on the identification of subsets of patients with a more favorable prognosis, in whom specific treatment offers the chance of long-term survival or even cure. Readers will find *Cancer of Unknown Primary* to be an ideal source of practically oriented information that will assist in delivery of the best possible care for patients with this challenging diagnosis.
