Stiff: The Curious Lives of Human Cadavers Mary Roach.2004-05-17 Beloved, best-selling science writer Mary Roach's "acutely entertaining, morbidly fascinating" (Susan Adams, Forbes) classic, now with a new epilogue. For two thousand years, cadavers - some willingly, some unwittingly - have been involved in science's boldest strides and weirdest undertakings. They've tested France's first guillotines, ridden the NASA Space Shuttle, been crucified in a Parisian laboratory to test the authenticity of the Shroud of Turin, and helped solve the mystery of TWA Flight 800. For every new surgical procedure, from heart transplants to gender confirmation surgery, cadavers have helped make history in their quiet way. "Delightful—though never disrespectful" (Les Simpson, Time Out New York), Stiff investigates the strange lives of our bodies postmortem and answers the question: What should we do after we die? "This quirky, funny read offers perspective and insight about life, death and the medical profession. . . . You can close this book with an appreciation of the miracle that the human body really is." —Tara Parker-Pope, Wall Street Journal "Gross, educational, and unexpectedly sidesplitting." —Entertainment Weekly

But these adults were also parents, grandparents, aunts, and uncles who had to make space physically, emotionally, intellectually, and cognitively for the infants, children, and adolescents around them. Growing Up in the Ice Age is a timely and evidence-based look at the lived lives of Paleolithic children and the communities of which they were a part. By rendering these 'invisible' children visible, readers will gain a new understanding of the Paleolithic period as a whole, and in doing so will learn how children have contributed to the biological and cultural entities we are today.

Ghaemmaghami, Pinar Zorlutuna. 2019-05-15 Adverse immune reactions to biomaterials are important bottlenecks for translation of novel biomaterials for clinical use. Moreover, recent advances in highthrough-put biomaterial discovery and synthetic biology, while providing exciting new veues, also significantly increases potential risks related to the in vivo reactions to these new materials. In this perspective, biomaterial field needs i) better understanding of cell/biomaterial interactions at systems level; ii) development of new analysis and testing tools for advanced risk assessment iii) tools and technologies for modulating reactions to biomaterials and iv) advanced in vitro models for understanding and testing of reactions to biomaterials. In the following collection of articles you will find examples of such systems, together with comprehensive reviews of current developments in in vitro model systems. Hypnosis at its Bicentennial F. H. Frankel. 2012-12-06 since the first International Congress for Experimental and Therapeutic Hypnotism in Paris in 1889, there have been several per iods of widespread interest in hypnosis among the professions as well as the lay public, followed by periods of profound neglect. Since the end of World War II, however, we have witnessed not only a strong resurgence of interest in hypnosis throughout the world but also the gradual development of the kind of infrastructure which a field requires to survive and prosper. The burgeoning clinical literature has been matched by a dramatic increase in the amount of systematic research carried out in a wide range of institu tions throughout the world. A tradition of triennial major world congresses has been established, beginning with the 3rd International Congress for Hypnosis and Psychosomatic Medicine in Paris in 1965. These meetings, encouraged and sponsored by the International Society of Hypnosis and its predecessor, the International Society of Clini cal and Experimental Hypnosis, are sponsored by universities and provide a forum for the exchange of ideas among scientists and clinicians throughout the world.
