Principles: Princ Economics Robert H. Frank, Ben Bernanke.2001 The text seeks to teach introductory students core economic concepts - the essence of economics - without overwhelming them with details. *Principles of Economics* presents the material in an intuitive way that avoids excessive maths. The authors introduce a short list of core principles, reinforce them by illustrating and applying each principle in several contexts, and then ask students to work exercises to see what they've learned. The text seeks to create economic naturalists; that is, after reading the text, students will ask (and answer) questions about their economic environment. For

example, students will see Braille dots on drive-up ATMs and ask why they're there. Peppered with such examples, Frank and Bernanke not only engage students, but teach them to see each feature of their economic landscape as the reflection of an implicit or explicit cost-benefit calculation.

Modern Economic Issues .2008 Presents the final twelve lectures of a course that examines some of the most important issues facing economic policymakers in the United States, determined by a survey of economists commissioned for this course.

The Exploration of Economics Robert L. Sexton.2008 Sexton's THE EXPLORATION OF ECONOMICS is written expressly to promote economic literacy and engage students in learning about how economics affects them as citizens in society. Known for its innovative approach to teaching economics, the book is packed with examples of pop culture and is extremely student friendly as it breaks down and presents economic concepts in smaller chunks to help readers easily absorb information, fully understand concepts, and remember key information. Along with the traditional two-semester Economics text, the 4th edition continues its innovative approach by offering the same content in modules. The new, eight-module format gives instructors complete flexibility to build their text based on the topics they want to cover. For students, this means the chapters taught are the only chapters bought.

Thus it is nice to see a book devoted to teaching written by two economists who have played an important role in advancing the teaching of economics throughout the profession.' - David Colander, Journal of Economic Methodology

The Truth about Economics Michael Ryan.2017-12-06 This book presents a fascinating story about how academia got it all wrong. Was it an academic conspiracy? Was it peculiar social pressures in academia? Regardless of how it all came about, it is time to teach our children financial literacy instead of economics. Financial literacy is a course that prepares our children for success in today's economic society. Typical economics courses do nothing to prepare your child for understanding day to day economic responsibility. This book presents the reasons to join the battle. It is time to stand up and demand relevant education from your state education system.

Educating Economists David C. Colander, KimMarie McGoldrick.2009 The economics major is a central part of a college education. Is that economics major doing what it is meant to do? And if not, how should it be changed? This book provides a provocative discussion of the economics major by many of the leaders in US economic education. It questions issues such as whether the disciplinary nature of undergraduate education is squeezing out the 'big-think' questions, and replacing them with 'little-think' questions, and whether we should change graduate training of economists to better prepare them to be teachers, rather than researchers.
