Educating America's Military Joan Johnson-Freese.2013-02-11

This book offers a detailed examination of the professional military education system in the United States, from a critical, insider's perspective. The mission of America's war colleges is to educate senior military officers in both the ways of war and the defence of peace. But are these colleges doing the best job possible in carrying out that important mission? Military education faces many demands, including a lack of preparation by the students, uneven quality of the faculty, and confusion over the curriculum. Many officers attend resident programs at the war colleges programs against the career advice of their leadership, despite the fact that they are virtually guaranteed graduation after less than a year of study, while others do their best to avoid it entirely. As the professional military education system has come under increasing scrutiny and criticism, some have even called for closing the war colleges. That answer, however, does not serve the United States well, especially in a complex, globalized environment, where military leaders need the best specialized education to prepare them for their future challenges. This volume examines the system that created and supports the perpetuation of this system, and why it is imperative that it be fixed. Written by a faculty member at a military college with twenty years' experience of the PME system, this book will of

much interest to students of the US Military, US politics and military education in general.

This collection takes a case study approach to enter into and explore spaces of 'Second-Third World' interaction during the Cold War. From the dining halls of a university, to hospital wards, construction sites, military barracks, pubs and more, the chapters drop the scale down from the global to the particular to better see, understand and interpret the complex nature of these spaces. These ordinary spaces are examined to understand how they were conceived, constructed, shaped and reshaped by people over time. Many are physical places of encounter, while others are more abstract, embodying ideological goals. In exploring these spaces the contributors show how the Second and Third World actors understood them and connected them to ideas such as gender and space, the space of the nation, of the modern and of the self. Essentially, it seeks to unravel how these spaces between Second and Third Worlds worked, and what, if anything, was distinctive and consequential about them. Second-Third World Spaces in the Cold War explores the ways in which these Second and Third World actors collaborated and clashed in these everyday spaces, and brings these multi-faceted, multi-actor histories to a vital centre ground.

Maintaining a Military Technological Edge Douglas

Glover, Army War College (U.S.). 2002 The key to maintaining a military technological edge which is needed to transform the Army to the Objective Force is directly related to a viable science and technology program. Current defense budgets have put previous science and technology programs at risk and required the defense industrial base to alter its business paradigms by downsizing consolidating, and globalizing. As the defense industry pursues these new business paradigms, the Army has increased its reliance on the technological capabilities of the commercial sector. Consequently, specific measures must be taken to avoid the unintended export of military-unique or dual-use technologies in the pursuit of economic success. Therefore, the Federal government must harmonize its export control policy to ensure economic success does not compromise America's military technological edge as the Army transforms to the Objective Force.

Waste Recycling Technologies for Nanomaterials Manufacturing

Abdel Salam Hamdy Makhlouf, Gomaa A. M. Ali. 2021-05-09 This book discusses the recent advances in the wastes recycling technologies to provide low-cost and alternative ways for nanomaterials production. It shows how carbon nanomaterials can be synthesized from different waste sources such as banana fibers, argan (*Argania spinosa*) seed shells, corn grains, camellia oleifera shell, sugar cane bagasse, oil palm (empty fruit bunches and leaves) and palm kernel shells. Several nanostructured metal oxides (MnO_2 , Co_3O_4 ,....) can be synthesized via recycling of

spent batteries. The recovered nanomaterials can be applied in many applications including: Energy (supercapacitors, solar cells, etc.) water treatments (heavy metal ions and dyes removal) and other applications. Spent battery and agriculture waste are rich precursors for metals and carbon, respectively. The book also explores the various recycling techniques, agriculture waste recycling, batteries recycling, and different applications of the recycled materials.

Cadets on Campus John A. Coulter.2017-03-24 Since the founding of the United States Military Academy at West Point in 1802, more than eight hundred military schools have existed in this country. The vast majority have closed their doors, been absorbed into other educational institutions, or otherwise faded away, but others soldier on, adapting to changing times and changing educational needs. While many individual institutions have had their histories written or their stories told, to date no single book has attempted to explore the full scope of the military school in American history. *Cadets on Campus* is the first book to cover the origin, history, and culture of the nation's military schools—secondary and collegiate—and this breadth of coverage will appeal to historians and alumni alike. Author John Alfred Coulter identifies several key figures who were pivotal to the formation of military education, including Sylvanus Thayer, the “father of West Point,” and Alden Partridge, the founder of the school later known as Norwich University, the first private military school in the country. He also reveals that military schools were present across the nation, despite the conventional wisdom that most military schools, and, indeed, the culture that surrounds them, were limited to the South. Coulter addresses the shuttering of military schools in the era after the Vietnam War and then notes a curious resurgence of interest in military education since the turn of the century.

Preserving the U.S. Military Technological Edge James M. Shames, Army War College (U.S.).1992 A comprehensive military-industrial-economic strategy is critical for improving U.S. defense and industrial abilities to research, develop, and produce advanced systems. Desert Shield and Desert Storm raised concerns about the U.S. capability to produce advanced weapons systems for future combat operations because many critical parts of U.S. weapons are increasingly being designed by foreign companies. U.S. industries appear to have an extremely difficult time transferring early technological leads into profitable, non-defense, commercial products and seem to miss opportunities to produce high technology products for domestic and international consumption, resulting in a further erosion of the U.S. industrial base. The diminished U.S. industrial base, in turn, makes it more difficult for the U.S. to produce weapons systems efficiently and reconstitute combat forces should a large force be required to resolve a crisis. This study focuses on finding a better way for the Department of Defense (DoD), industry, and congress to cooperate toward creating a more viable technological and industrial base to support both national defense and economic interests.

ICCS20 - 20th International Conference on Composite

Structures Nicholas Fantuzzi.2017-07-24 Composite materials have aroused a great interest over the last few decades, as proven by the huge number of scientific papers and industrial progress. The increase in the use of composite structures in different engineering practices justify the present international meeting where researches from every part of the globe can share and discuss the recent advancements regarding the use of structural components within advanced applications such as buckling, vibrations, repair, reinforcements, concrete, composite

laminated materials and more recent metamaterials. Studies about composite structures are truly multidisciplinary and the given contributions can help other researches and professional engineers in their own field. This Conference is suitable as a reference for engineers and scientists working in the professional field, in the industry and the academia and it gives the possibility to share recent advancements in different engineering practices to the outside world. This book aims to collect selected plenary and key-note lectures of this International Conference. For this reason, the establishment of this 20th edition of International Conference on Composite Structures has appeared appropriate to continue what has been begun during the previous editions. ICCS wants to be an occasion for many researchers from each part of the globe to meet and discuss about the recent advancements regarding the use of composite structures, sandwich panels, nanotechnology, bio-composites, delamination and fracture, experimental methods, manufacturing and other countless topics that have filled many sessions during this conference. As a proof of this event, which has taken place in Paris (France), selected plenary and key-note lectures have been collected in the present book.

Colleges and Universities in World War II V. R.

Cardozier.1993-03-30 V. R. Cardozier provides a comprehensive and engaging look at the role played by colleges and universities in World War II, the contributions they made to the war effort, and the impact of the war on higher education institutions. He captures the wartime mood and spirit of the American people, something that is not easy to convey to younger readers who did not directly experience these times. During the war, American colleges and universities were dedicated to serving the needs of the military and all agencies of the government through training, research, and service. The Army, Navy, and Army Air Forces College Training Programs are discussed in separate chapters.

Cardozier examines many adjustments colleges made:

accelerating their calendars, adapting to losses in enrollment, and changing the curriculum. Military training programs on campuses and how they differed from college training programs are described, as well as the impact of the war on faculty: depletion of the teaching ranks, wartime research on campus, and faculty in the military and government service, especially in OSRD and OSS. The final chapter examines the overall impact of the war on higher education, such as financial problems due to loss of enrollment, issues of academic freedom, academic credit for military service, the GI Bill, and changes in curricula, teaching tools, and campus cultures.

Through this review, we aim at providing an easy-to-access source of knowledge about military mobilization policies and historical developments as well as the main ideas, politics, and events that shaped them. Through this review, we offer a glimpse on developments that influenced societies and political systems and were reflected in their militaries.

Smisek.2023-07-21 *Revolución Libertadora* [or the Liberating Revolution] is the name by which the military dictatorship that ruled Argentina is known after overthrowing the constitutional president, Juan Domingo Perón, closing the National Congress, deposing the members of the Supreme Court, the provincial and municipal authorities and university and commissioning the entire Judicial Power through a coup that began on September 16 1955 and that, after more than two years, transferred the government to President-elect Arturo Frondizi, on May 1 1958, who would be overthrown in 1962. The preparations for the coup of September 1955 were intense and very careful, since the plotters did not want to repeat the mistakes made in the events of June. For this coup, the collaboration of several important army units was finally obtained, in addition to the Navy and the Air Force. *Revolución Libertadora* Volume 2 details the warlike actions of both sides day by day, along with the eventual resignation, exile and return of President Perón. The text is supported by an extensive number of rare images, tables and specially-commissioned colour artwork.

The Combat Edge .2000-12

A Study of College Students' Attitudes Toward the Introduction of the Military Science Program Into the Two-year Technical College

Thomas O. Whipple.1976

Buying Military Transformation Peter Dombrowski,Eugene Gholz.2006-09-26 In Buying Military Transformation, Peter Dombrowski and Eugene Gholz analyze the United States military's ongoing effort to capitalize on information technology. New ideas about military doctrine derived from comparisons to Internet Age business practices can be implemented only if the military buys technologically innovative weapons systems. Buying Military Transformation examines how political and military leaders work with the defense industry to develop the small ships, unmanned aerial vehicles, advanced communications equipment, and systems-of-systems integration that will enable the new military format. Dombrowski and Gholz's analysis integrates the political relationship between the defense industry and Congress, the bureaucratic relationship between the firms and the military services, and the technical capabilities of different types of businesses. Many government officials and analysts believe that only entrepreneurial start-up firms or leaders in commercial information technology markets can produce the new, network-oriented military equipment. But Dombrowski and Gholz find that the existing defense industry will be best able to lead military-technology development, even for equipment modeled on the civilian Internet. The U.S. government is already spending billions of dollars each year on its military transformation program-money that could be easily misdirected and wasted if policymakers spend it on the wrong projects or work with the wrong firms. In addition to this practical implication, Buying Military Transformation offers key lessons for the theory of Revolutions in Military Affairs. A series of military analysts have argued that major social and economic changes, like the shift from the Agricultural Age to the Industrial Age, inherently force related changes in the military.

Buying Military Transformation undermines this technologically determinist claim: commercial innovation does not directly determine military innovation; instead, political leadership and military organizations choose the trajectory of defense investment. Militaries should invest in new technology in response to strategic threats and military leaders' professional judgments about the equipment needed to improve military effectiveness. Commercial technological progress by itself does not generate an imperative for military transformation. Clear, cogent, and engaging, *Buying Military Transformation* is essential reading for journalists, legislators, policymakers, and scholars. *Education in the Hungarian People's Republic* United States. focus on a major player in the setting of mixed economies: the top managers of state-owned enterprises. Bringing together world-renowned scholars, this collection analyzes the actions of these managers and their contribution to the rise and fall of the mixed economy during the Golden Age, opening up a comparative perspective of the topic. The book forces readers to reconsider how crucial state-owned enterprises were for economic recovery and for the modernization of the production apparatus of many countries in Western Europe, India, Latin America and South Africa. Key chapters discuss state-owned enterprises in twentieth-century Europe, the managerial revolution in Italy, the role of the state in Argentine industrialization, and the organization of capital in the Indian economy. This insightful collection will appeal to scholars and students with an interest in economic history and the socio-economic impact of state-owned companies around the globe.
